against the Christians (Byzantines and Crusaders) and the Persians (= Mongols). Towards the end, the novel grows more and more into a fantastic tale of adventure, sorcery and roguery. Traditional tales and motifs, also to be found in other Arabic contexts such as the *Thousand and One Nights* (as well as some which are known in the Iranian tradition), have been used. Baybars’s cunning but basically faithful servant ‘Ukhmân—half-groom-cum-pickpocket, half saint—and (in the later parts of the novel) an Ismâ’îll master of disguise by name of Shîba also play large parts. Shîba is constantly on the move, reconnoitring, freeing Muslim prisoners, and harming or at least scaring his enemies with his craftiness and pranks. His opponent on the Christian side is the dangerous Gwân (= Juan; the original name given is Girgîs), a deadly enemy of Islam. Besides the Mamlûks, there are also Syrian Ismâ’îlls (i.e., Assassins, even though they are never called such) who take part in the battles. The printed editions give an outline, at the end, of the history of Egypt from Mamlûk times to the present day. This is a subsequent addition, which has nothing to do with the actual novel.

Historical events are presented as seen from a bourgeois point of view. The novel has a special predilection for impoverished merchants or craftsmen. Pictures of life in the streets of Cairo are particularly attractive. Amongst the degenerate Mamlûk soldiery, Baybars appears as the just ruler who protects his subjects and fights corruption. Crude jokes, puns, and situations of a certain primitively comic nature, appealed to the uncultured taste of the listeners (the *sîra* was probably always meant to be recited, not read). A definite Islamic conception of the world underlies the whole. Christian and other opponents of Islam are—unless they are later converted—painted in the blackest colours. There is an underlying offensive religious fanaticism. As all non-Muslims are necessarily villains, they have no claim to decent treatment, still less to pity, and none whatever to respect. Things are occasionally very harsh among Muslims, however, evenly distributed. So far there has been no close study of these (cf. Wangelin, 307). The language is somewhat colloquial, particularly in the manuscript texts.

The literary form of the *sîra* corresponds to that of similar Arabic popular tales. The prose tale is interrupted and enlivened by sections of rhymed prose and interspersed with poems. These (in part quotations, in part verses made up for the *sîra*, in classical metres as well as strophic form), are not, however, evenly distributed. So far there has been no close study of these (cf. Wangelin, 307). The language is somewhat colloquial, particularly in the manuscript texts.

The first literary mention of the *sîra* is Sidi Abd Allah al-Maghrâwî. He is the Muslims’ helper in all plights, who protects his subjects and fights corruption. His opponent on the move, reconnoitring, freeing Muslim prisoners, and harming or at least scaring his enemies with his craftiness and pranks. His name “al-Mansuri”). In the retinue of Kala’un, he was appointed sultan of Egypt and Syria, appointed Baybars governor of the province of al-Karak in 664/1266 in campaigns in Syria and Cilicia, in 666/1268 in the siege of Antioch and in 673/1275 in December 1293 al-Malik al Nasir Muhammad was elected sultan, he appointed Baybars general (mukaddam alf) and gave him the high post of da‘îddr (chief of the chancery). From that time
Baybars' career was linked to the fate of this prince, who was twice deposed and reinstalled. Baybars lost his post after al-Malik al-Mansur Ladlín had become sultan instead of al-Malik al-Násir Muhammád, but he was reinstated on al-Malik al-Násir's return to the throne, in 698/1299. In the following years he fulfilled both military and administrative tasks, until he was deposed from his post of ḍawādār in 704/1304-05. Meanwhile al-Malik al-Násir Muhammád had lost all influence on the government and had become a mere puppet in the hands of two powerful generals and at last he abdicated formally. Baybars al-Manṣūr was an ardent partisan of this prince and made strenuous efforts to have him reinstated. When this came about in 709/1310 Baybars was entrusted with various administrative tasks and on 17 Dhu‘d al-‘Ijāh 711/13 October 1311 he was appointed vicerey of Egypt (ndib al-salātān), second to the sultan only. But he held the post less than a year. In Rabī‘ II 712/August 1312 he was deposed and sent to the state prison in Alexandria, where he remained for five years. He died on 25 Ramadān 725/4 September 1325, about eighty years old.

Baybars was a pious Muslim, fond of theological studies, and besides his military and political activities he found time to write historical works, with which he did the help of a Christian secretary. His chief work was a general history of the Islam until the year 724/1324 called Zubdat al-Fihira fī Tarīkh al-Hidjra. This voluminous work, which is divided into centuries, is based in its former parts on the Kāmil of Ibn al-Ashīr, whereas its last part is an important source for the history of the Bāṭrī Mamlikūs, since the author tells the story of campaigns and political events in which he participated himself. The strong personal note of the Zubdat al-Fihira is even more conspicuous in the account which Baybars al-Manṣūr gives of the political history of Egypt at the end of the 13th and at the beginning of the 14th centuries, where he does not conceal his strong bias for al-Malik al-Násir Muhammád. His work was much used by other historians, among whom al-‘Aynl should be mentioned especially. It was abridged and continued by a later author, whose work is preserved in MS. Bodleiana I, 704. Baybars al-Manṣūr himself wrote a shorter history of the Bāṭrī Mamlikūs, which he called al-Tawḥīf al-Mulāli‘iyā fī I‘lālama al-Turkīyyā. This work, partly written in rhymed prose, relates the history of the Mamlikūs up to 711/1311-12. Al-Sakhwī also mentions a History of the Caliphs written by Baybars. It was called al-La‘dāfī fī akhkhār al-khaldīnī.

BAYBÜRD (BAyyBURD), known to the Byzantines in the time of Justinian as Baibearp, is situated on the Çoruh river, about 300 km. to the north-west of Erzurum. The Seljūq Turks overran this region in the years 440-447/1054-1055. After the battle of Manzikert in 463/1071 BAYBÜRD came under Turkish rule, now of the Saltukids at Erzurum and now of the Dānishmands at Sivas, although the Byzantines, who still held Trebizond, did in fact recapture the town for a time in the reign of Alexios I Komnenos. During the 13th and 14th centuries BAYBÜRD, under the political domination of the Seljūq sultans of Rūm and later of the Mongol Il-Khāns of Persia, prospered from the active commerce which, in the hands of Christian (i.e., Venetian and Genoese) as well as Muslim merchants, flowed along the route leading from Trebizond to Erzurum and thence eastward to Tabriz. The Seljūq sultans and, after them, the Ak Koyunlu Turcomans had control of the town from about the mid-14th to the close of the 15th centuries. BAYBÜRD fell to the Ottomans in 930/1514 during the course of their Čaldırān campaign against the new Şafāwī state in Persia. Ottoman rule over BAYBÜRD and its adjacent territories was consolidated in 940-942/1533-1536, when Sultan Sulaymān organised on a firm basis the eyālet of Erzurum. The Russians occupied the town in 1829, much of the old fortress of BAYBÜRD being ruined in the course of the fighting. Russian forces also defeated the Ottomans in the battle of BAYBÜRD (July 1916) during an offensive directed against Erzindān. BAYBÜRD was in Ottoman times a ḍādār of the sandjak of Erzurum in the eyālet of that name, but is now included in the present Turkish province of Gümüşhāne. Its population was estimated in 1935 at 70,339 inhabitants, the figure for the entire ḍādār being given as 64,813 people. The region is noted for its production of cereals, wool, hides, etc.

( V. J. Parky)

AL-BAYDĀ‘ (Al-Beizā‘), “the white town (castle),” a common Arabic place-name, designating localities scattered all over the Islamic territory. Hamdānī (Siha) quotes four places with this name; Yākūt has sixteen different al-Baydā‘. Most important of these is the Persian town al-Baydā‘, situated in the province Fars, N. of Shiraz and W. of Iṣkahr. Its original name was Naṣā‘. Being the chief town of the Kāmfrūz district, it was as large as Iṣkahr in the 14th century, surrounded by fertile pasture lands. Several scholars carry the name of this place (see al-BAYDĀ‘). Also al-Hallādī [q.v.] was born here. For the S. Arabian town al-Baydā‘, the main place of Upper Bayhān, see art. BAYHĀN.

BAYDAK [see SHATRANDJ].
AL-BAYDAWI, 'Abd Allāh b. 'Umar b. Muḥammad b. 'Ali b. Khayr Nāṣir al-Dīn. He belonged to the Ẓāhirī school, and attained the position of kādi at Ẓafrah. He had a reputation for wide learning, and wrote on a number of subjects including Qur'ānic exegesis, law, jurisprudence, scholastic theology, and grammar. His works are generally not original, but based on works by other authors. He is noted for the brevity of his treatment of his various subjects, but his work suffers on this account from a lack of completeness, and he has been blamed for inaccuracy. His most famous work is his commentary on the Kur'ān, Anwār al-tasālil wa-asrār al-ta'wil, which is largely a condensed and amended edition of al-Zamakhshārī's Kāshf al-Din. That work, which displays great learning, suffers from Muṭʿalīlīlī views which al-Baydawi has tried to amend, sometimes by refuting them and sometimes by omitting them. But on occasion he has retained them, possibly without fully realising their significance. In his introduction he does not claim to be producing an original work. He says that he had long wished to produce a book which would include the best of what he had learned from leading Companions, learned Followers, and upright men of early days who were of lesser rank. He also purposed to include allusions which were the result of his own and his predecessors' researches. It would contain some readings of the 'eight famous imāms' (for al-Baydawi adds Yaḥyā of al-Baṣra to the more normal number of seven readers of the Kur'ān), and would also include readings peculiar to one or other of the recognised readers. The result is a work which has been very popular, and has accordingly been published in many editions. Numerous commentaries have been written on the whole work, or on parts of it. Of these Brockelmann lists 83, after which he published two works which drew attention to places where al-Baydawi has failed to remove al-Zamakhshārī's heresies. Of the many editions of the work mention may be made of that by H. O. Fleischer (Leipzig 1846-8), 2 vols., Indices by W. Fell (Leipzig 1878); and that of Cairo, 1350 A.H., 4 parts in 2 vols., with the commentary of al-Khathīb al-Baghdādī. It would contain some readings of the eight famous imāms for inaccuracy. His most famous work is his commentary on the Kur'ān, Anwār al-tasālil wa-asrār al-ta'wil, which is largely a condensed and amended edition of al-Zamakhsharī's Kāshf al-Dīn. AL-BAYDHAK, Abū Bakr b. 'Ali al-Ṣināḥī, author of Memoirs on the beginnings of Almohad history. His name was known only through extracts quoted by Ibn al-Ṭūrīyīn in his K. al-Dīmān, by the anonymous author of al-Fula al-Mawṣīyya, and from various passages in which Ibn al-Ṭātānīn, author of Nasn al-Dīmān, reproduces him. The discovery of the bundle of papers (no. 1919) in the library of the Escorial by L. Édi-Provencal, and their publication in the Documents indits d'histoire almohade, brought al-Baydhak to light, although in a trap-door, from the obscurity in which he lay. We find in his work "the actual Memoirs of the experiences of one who frequently took an active part in the events he sets down and who immediately appears as one of the early Almohads. At the first glance it can be seen that this is no chronicle of the usual type or form. The new information provided on each page and its character of authenticity nearly always enables us, in a remarkable manner, to complete our knowledge of the Almohads in North Africa, which has hitherto been exiguous. The thirty six pages of the manuscript have no lacunae in the text. Unfortunately, however, the beginning is missing and also no title is given. The information we possess on al-Baydhak is limited to what he himself tells us in his work, but this is too vague to serve as the basis for a biography. We find him in the following of the Mahdi, after the latter reached Tunis, and in that of 'Abd al-Mu'mīn, close to their persons and acting as a servant. And it was as such that he recorded in his work merely what he actually saw and heard". An enthusiastic convert, he adds to the facts he relates all such incidents of a supernatural order as serve to confirm the divine mission of Ibn Tūmār and the predestined choice of 'Abd al-Mu'mīn. We do not know whether he came with his master from the East. However, the appellation baydhiḥak, which passed from Persian into Arabic, is still in use among the Berbers of the South for the pawn in the game of chess. The one thing certain is that al-Baydhak's mother tongue was Berber and that he did not know Arabic very well. This is born out by the colloquialisms abounding in his Memoirs, and the Berber phrases appearing in his narrative. Remaining in the background as a faithful and devoted servant without political ambitions, and having served the Mahdi, 'Abd al-Mu'mīn and even Yūsuf I, down to whose time the information he provides extends fragmentarily, he disappears from the Almohad scene as suddenly as he appeared, silently and without fame."
satisfaction for his uncle's death. An uneasy truce was concluded between the cousins; and when hostilities were later resumed it ended without bloodshed in Ghazan’s favour thanks to the address and diplomacy of his general Nawruz and in particular to Ghazan’s having, at Nawruz’s suggestion, adopted Islam and so won the support of the Muslims. Baydawi was defeated by his adherents and met his end in Naḵchīwān (the present-day Nakhichevan in the Azerbaijani S.S.R.) whilst attempting to escape. During his brief reign he is said to have shown special favour to the Christians and so given offence to the Muslims, although according to Bar Hebraeus he was himself a convert to Islam.

(B. WARTHOLD—J. A. BOYLE)

BAYHAKṢ, formerly the name of a district to the west of Nishāpūr in Khurāsān. In Tāhirid times it contained 390 villages with a revenue assessment of some 236,000 dirhams. The chief towns were Sabzawār and Khurasawīrd. It capitulated to a Muslim army under Abū ʿAbd Allāh b. ʿAmīr in 365/976-7. In 548/1153 it was devastated by Yānālūq. According to Hamd Allah Mustawfi its people were ʿIḥnā ʿAshārī Shīʿīs. Among its famous men were Niẓām al-Mulk, the vizier of Alp Arslān and Malik-shāh, Abū ʿl-ʿAfdī Muhammad b. Husayn Bayhakṣ, the author of the Taʿrīkh-i Bayhakṣ, and Abū ʿAlī Razzāk, the founder of the Sarbadar dynasty. Formerly marble quarries were worked there.

(A. K. S. LAMBOTON)

AL-BAYHAKṢ, Abū BARK AL-HĀMID b. AL-HUSAYN B. ṬAʿLĪ. B. MUṢĀ b. KHUṢRAWDĪRĪ, traditionist and Shāfīī faḳh. He studied Tradition with Abū ʿl-Hasan Muhammad b. ʿAlwān, al-Hākim Abū ʿAbd Allāh Muhammad b. Abū ʿAlī, and others. He travelled in many countries in pursuit of this subject and is credited with having had a hundred Shaykhīs. In theology he was an Ashʿarī. He was of a frugal, pious, and scholarly nature. Towards the end of his life he went to Nishābūr where he taught traditions and transmitted his books. Al-Bayhakṣ was a voluminous writer, his writing being said to have reached 1000 fascicules. Although he was a traditionist of some note, he is reputed to have been unequaled with the works of al-Tirmidhī, al-Nasāʾī, and Ibn Mājd; and it is suggested that he had not seen the Musnad of Ahmad b. Ḥanbal. He used al-Hākim’s Mustadrak freely. Al-Bayhakṣ said that his compass in Tradition was not great, but that he was an adept at dealing with it, being versed in the sub-divisions and the men who appear in iṣnād. Among his writings his K. al-suʿān al-kubrā (publ. Ḥaydarābād, 10 vols., 1344-55) is perhaps his most notable work. It has been held in high esteem; for example, al-Ṣubkī declared that there was nothing like it in adjustment, arrangement and excellence. In this work notes are frequently added about the value or otherwise of traditions and traditionists, and attention is often drawn to the fact that particular traditions are included in one or other of the recognised collections.

The Ḥaydarābād edn. has in each vol. a valuable index of men of the first three generations and traditions traced to them, with indications of the nature of the transmission. Another work which was valued is his Nūsūṣ al-Shāfīī. He has been said to have been the first to collect al-Shāfīī’s legal precepts, but al-Ṣubkī denies this, saying he was the last, for this collection included more than earlier efforts, and therefore there was no need to repeat the work. Al-Daghawaynī, ʿAmīn al-Harāmaysī, highly praised his writings in support of Shāfīī’s doctrine. Al-Bayhakṣ was born in 384/994, died in 458/1066 in Nishābūr, and was buried in Khurasawīrd.

BAYHAKṢ, Qādir, al-Tālḥ, al-hujjāt, iii, 309 ff.; Subkī, Tahābāt al-Shāfī’īyya al-kubrā, iii, 331 ff.; Ibn Khallikān, No. 27; al-Samānī, f. 102a; Yāḥyā, Mirzā al-dīnān, iii, 81; Ibn al-ʿImād, Shaḥḥārdī al-dhahab, iii, 304; Brockelmann, i, 446 f.; ii, 618 f.; Sarkis, Dict. encyc. de bibl. arabe, 620 f. (J. ROBSON)

BAYHAKṢ, Abu ʿl-ʿAfdī Muḥammad b. Ḥusayn KĀṬĪB (in Persian: Dābīr), famous Persian historian of the 5th/11th century, born in 385/995 at the village of Hārīshbād in the district of Bayhakṣ (today the district of Sabzawār in Khurāsān). At an early age he went to study at Nishābūr, then an important centre of learning. He soon entered the chancellery of the Ghaznawid rulers at Ghaznī, with the function of secretary, in this city he spent most of his life. He was at first the assistant of the celebrated writer Abū Nasr Ṭuḥrī, director of this chancellery, and was charged with drafting and making copies of the most important officials papers dispatched by Māmūd the Ghaznawī (389-421/999-1030) and his son and successor Māmūd (421-33/1030-41); during the latter’s reign his first master died, in 431/1039, and was replaced by Abū Saḥl Zāzānī, with whom he was not always on good terms. During the reign of ʿAbd al-Raḥmān (440-45/1049-51), he was appointed director of the chancellery, but was dismissed after a short time. At the king’s order, a Turkish slave named Nūyān confiscated all his property, and he was imprisoned on the pretext that he had not settled his wife’s dowry. He remained in judicial imprisonment until the usurper Ṭuḥrīl Birār occupied the throne in 443/1051 and imprisoned him in a fortress with other courtiers held in custody. After his release, he did not seek employment at court after the year 451/1059, and he died in the month of Ṣafar 470/2 August-21 September 1077. Bayhakṣ is the author of a voluminous history of the Ghaznawī dynasty, written in an archaic and sometimes complicated style. He states that he commenced his history with the year 409/1018-19, but a large part of the work has long been lost, and the only traces of it are found in the borrowings of other Persian historians—the last of whom lived in the 9th/15th century. This work, which comprised 30 volumes, has been variously entitled by different authors: Dāmī al-Tawārīkh; Dāmīt Taʿrīkh-i Sabuktān; Taʾrīkh-i Āli Maḥmūd, Taʾrīkh-i Nāṣiri, and Taʾrīkh-i Āli Sabuktān. It is almost certain, however, that the different volumes referring to each ruler would have borne different titles. Thus the whole collection of 30 volumes would have had a general title of Dāmī al-Tawārīkh or Taʾrīkh-i Āli-i Sabuktān; the first part, relating to Sabuktān, would have been entitled Taʾrīkh-i Nāṣiri, the second part, relating to Maḥmūd, that of Taʾrīkh-i Yāmīn or Maḥmūd-i Maḥmūdī, the third part, of which the most important portions have come down to us,
would have had the title of *Ta'rikh-i Mas'udi*, while the title of the final part or parts must remain a subject for conjecture. The part which has come down to us comprises volumes 5 to 10; volumes 11 to 30 are lost. As regards the six volumes which we possess (5 to 10), which are usually known as *Ta'rikh-i Bayhaki*, and which ought rather to be called *Ta'rikh-i Mas'udi*, the title which I have given them in my edition, there are certain noticeable lacunae in the sequence of events, which indicates that a portion of these volumes has also been lost. Volumes 11 to 30 must have covered the end of the reign of Mas'ud and the reigns of his successors up to the beginning of the reign of Ibrāhīm in 451/1059, that is to say, the reigns of Mawdūd, Mas'ud II, Abu 'l-Ḥasan 'Allā, Ābd al-Raḥšīd and Farrukhzād, which extend over 19 years in all from 432/1040 to 451/1059. The known MSS. of the part which has come down to us close with the events of the year 451/1040, and the last year of the reign of Mas'ud is missing. It can easily be seen that this part was written later, doubtless from notes made at the time, because the author five times gives us the date 451/1059 for the composition of certain passages. On one of the occasions on which he mentions this date, he states that he has been in the service of the Ghaznawids for twenty years, which proves that he entered their service in 431/1040 at the age of 46. Consequently 451/1059 was the year in which he began to write up his notes, which covered a period of 42 years from 409/1018 to 451/1059. He states that events prior to 409/1018 had been related by his predecessor the historian Maḥmūd Warrāš, whose work is lost. The end of chapter ten of the *Ta'rikh-i Mas'udi* which has survived includes a portion of a chronicle on Khwārizm written in Persian by the great savant Abu 'l-Ḥayān al-Bīrūnī (lit. [362/440/972-1048]) under the title of *al-Musadda fi Aḥbār Khwārizm*, which is incomplete and of which no other version exists. Bayhaki seems to have written other works, one of which bore the title of *Makāmāt-i Abū Nasr-i Muḥkām* a collection of reminiscences which had been related to him by his first master in the Ghaznavid chancery. Some fragments of this work have been quoted by modern authors. Another work, quoted by the author of the History of Bayhak, bore a title which can be read either as *Ruhat al-Kutūb* or *Zināt al-Kutūb* and seems to have been a manual of literary style as is indicated by its title. The fragments of the *Ta'rikh-i Nāṣīrī* which have come down to us were incorporated in the *Dhāriَāt al-Khūṣūṣ wa Lāmināt al-Rawāyāt* of Muhammad ʿAwwī (two recent incomplete Tehran editions), the *Tabākāt-i Nāṣīrī* of Minhādī al-Dīn b. Ṣiraḍī al-Dīn al-Durjānī (editions: Calcutta and Kabul-Lahore), and the *Madāmaj al-Ansāb* of Muḥammad b. ʿAllā Shabānkārī (MSS.). The surviving portion of the *Ta'rikh-i Yaminī* is incorporated in this last-named work, and the surviving portion of the final part of the *Ta'rikh-i Mas'udi*, which we possess, is quoted by ʿAwwī. The passages from the *Makāmāt-i Abū Nasr-i Muḥkām* are quoted by ʿAwwī and by Sayf al-Dīn ʿAkkī in his work on the lives of the *ustārūs* entitled *Āṭhār al-Wuzarāʾ* (MSS.). The famous historian Ḥāfīz Abrū has also reproduced certain passages from the lost portions in his own monumental history. The author of the History of Bayhak states that the *Diāmāt-i al-Taṣawirīkh* comprised more than 30 volumes; of these he had seen only a few in the library of the Khwārazmī, certain others in "Māhī-i 'Irāk" library and still others in the possession of various people. This proves that a large part of Bayhakī's chronicle had disappeared within a short time after its composition, since already in the 6th/12th century this author did not have access to all the volumes. Only ʿAwwī (6th/12th century) Minhādī al-Dīn (7th/13th century) Ṣhabānkārī (8th/14th century), and Ḥāfīz Abrū (9th/15th century) had at their disposal certain—perhaps fragmentary—portions of the work. The *Makāmāt-i Abū Nasr-i Muḥkām* was consulted by ʿAkkī in the 9th/15th century, but no one has mentioned his work on the epistolary art except the author of the History of Bayhak. The MSS. of the *Ta'rikh-i Mas'udi* so far known nearly all come from India and indicate a common source.

(Said Naficy)

**Al-Bayhaki, Zāhir al-Dīn Abū 'l-Ḥasan 'Ali b. Zayd b. Fundūk,** Persian author, born at Sabzavār, the administrative centre (kasaba) of the district of Bayhak (W. of Naysābūr in Khurāsān) in 493/1100. The date 499/1106 in Yakūt (Iṣrāḥād, v. 208), though cited from Bayhakī's autobiography (see below), has been shown to be wrong by M. Kāzwīnī. Of his numerous works (more than 70 titles on an encyclopaedic range of subjects listed in Yakūt) the best known are a history in Persian of his native district, *Ta'rikh-i Bayhak* (to be distinguished from the *Ta'rikh-i Bayhak* of Abu 'l-Fadl al-Bayhakī [see preceding article]), and an Arabic supplement (lāsimma) to the biographical *Ṣawāna al-biḥma* of Abū Sulaymān al-Sulaymānī. The *Ta'rikh-i Bayhak* was translated into Persian probably about 730/1330. It has been edited together with the Persian version by M. ʿṢaffī (Lahore 1935), and under the title *Ta'rikh Ḫūmādāt al-Islām* by M. Kurd ʿAllī (Damascus 1946). The *Ta'rikh-i Bayhak* though scarcely very original (it is based, the author tells us, on an earlier history of Bayhak, as well as on a 12-volume *History of Naysābūr* by al-Ḥākim Muḥammad b. ʿAbd Allāh), is full of interest. The contents have been analysed by Rice (Supplement to the Catalogue of Persian MSS. in the British Museum, 60 ff.), and there is an edition by A. Bahmanyār (Tehran 1317/1936), with an important introduction by M. Kāzwīnī. The family of Bayhakī, which had been distinguished for several generations previous to his time, called themselves Ḫākimīn from an ancestor, al-Ḥākim Fundūk (*Ta'rikh-i Bayhak*, 102), and traced their descent back to a Companion of Muḥammad, Dhu ’l-Šahādatayn Ḫurayzām b. Ṭāḥītī. Bayhakī also claimed relationship with Ṭabarī, the historian (*Ta'rikh-i B. yahak*, 19). It appears from his autobiography, given in his last historical work *Maḏṣūrāt al-Taḏāsīr* wa-Ṣawāna al-Ghanīrī (or Maḏṣūrāt al-Taḏāsīr ft 'l-Tawārīkh) and taken over by Yākūt, that he had his higher education at Naysābūr and
Marw, and that his career was mostly in Khurāsān. For a short time (526/1132) he was frddi of Bayhaḵ, probably owing to the influence of his father-in-law, Muḥammad b. Masʿūd, a former governor of Rāyy, then mukhrif al-mamlakah, but he found his duties irksome and soon resigned. A short time later we find him studying algebra and astrology in Rāyy (Iṣrāḏād, v, 210). The autobiography comes down to 549/1154-55, when Bayhaḵ was in Nāṣābūr. Nothing is there said of a visit which he paid with his father to Ṣultan-i Ḫayyām in 507/1113-14 (Ṭadżīm-i Ṣīwān, ed. A. Bahmanyar, Tehran 1317/1938; and Ṣāb Ṣāb, where Djuwaynī says incorrectly that it was a sequel to the Ṣīwāni, i.e., approximately A.D. 1020-1165 or nearly 150 years, and was intended as a sequel to the Taʿrīḵ-i Yamīnī of ʿUthīb (Ṭaʿrīḵ-i Bayhaḵ, 20). Yāḵūt quotes the work elsewhere, e.g., Iṣrāḏād, v, 124. It is quoted also by Ibn al-ʿAḏīr (xi, 247-49, cf. 253) for the career of Sultan Shāh of Khwārizm, and by Duwaysī (Ṭaʿrīḵ-i ʿUthīb, ed. A. Boyle, 190 ff. = Boyle, 293 ff. with the passage in Ibn al-ʿAḏīr mentioned above). The Mašdrīb al-Taḏdrīb is referred to by Bayhaḵ himself (Ṭadžīmān, 168) for an account of the contemporary poet Rāshīd al-Dīn Wāṭāwī, and is also cited by Ibn Abī Usaybīʿa (Taβāḳāt al-ʿAṯībīa, i, 72) for the date of Djalānūn (Galen), and by some other authors, the latest of whom appears to have been Hamd Allāh Mustawfī (8th/14th century). Bayhaḵ himself died in 565/1170 according to Yāḵūt.

Some portions of Bayhaḵ’s poetical anthology Wisḵāh al-Dumyaḵ, a continuation of the Dūmāyat al-Kasr of Bāḵ_passwd and including specimens of his own poetry in Arabic, are known. See Brockelmann, and H. Ritter, ‘Philologika XIII,’ no. 173 (Orients, Vol. 3, 1950, 77). There was also a supplement entitled Durrat al-Wisḵāh (Iṣrāḏād, v, 212).

A work on judicial astrology by Bayhaḵī in Persian, Pādavān al-Aḵbām, is preserved in Cambridge University Library (E. G. Browne, Handlist of Muḥammadan Manuscripts, 235), and a companion of this work at one time existed (ibid., 254).

(D. M. Dunlop)

BAYḤĀN (Bāḥān), wādī and territory in South Arabia, situated between Wāḍī Ḥarīb (q.v.) in the west, and Wāḍī Māḥliḵ (with the high plateau of the Ṣiṣīyān) in the east (cf. art. ʿAḏīrḵāl). This long valley, stretching from the Kawr ʿAwdhilla (cf. art. ʿAḏīrḵāl) ca. 100 km. (65 miles) northward, until its dry “delta” disappears in the desert Ramlat Sabatayn, was once the centre of the ancient state of Ḵatābān (q.v.). Thanks to the American expedition in 1950 the main part of Bayḥān now is by far the best known of all South Arabian districts.

In Ṣabaeān inscriptions BYḤN only means a tribe (Ḍḥū Bayḥān) or a temple. This fact does not seem to favour the etymology of Landberg (Arabic, v, 4) “common pasture land” (opp. kīma). From Ṣabaeān texts we know of another Bayḥān, a place situated in the Dūḡ (Ryckmans, i, 324; Grohmann, i, 174; v. Wissmann a. Höhner 15, 77). According to the ʿṢif of Ḥamānī, Bayḥān was irrigated from Ṣabān and Ḥaḡ, but got its drinking water from Wāḍī Ṣuḏār. The inhabitants belonged for the most part to Banū Murād, whose leader of Āl Ṣakhrān enjoyed a high reputation in the tribe of Madḥīḏ. Yāḵūt has Bayḥān in his list of South Arabian districts (mīḏāf).

There are three Bayḥān districts to be distinguished:

(1) Bayḥān al-Dawla (Bayḥān al-ʿAḏīr) is the narrow, barren and sparsely populated upper part of the valley, from its beginning unto Nāṭī on the frontier of Bayḥān al-Ḵaṣāb. Like the territory of the Banyār (q.v.) it formerly formed part of the Raṣṣās sultanate, but now belongs to the state of Ṣaman. The climate is unhealthy, owing to the stagnant waters of the Ṣāḥyi. The capital al-Bayḥān (q.v.) is in the S.

(2) Bayḥān al-Ḵaṣāb, the fertile central part of the valley. (See the following art.)

(3) Bayḥān al-Asfāl, the remaining, northern part of the wādī, is a sparsely populated plain, gradually turning into the wide sand desert. Its four districts (Ḥinw, al-Ṣḥatt, Ḥaḵba, ʿĀṣayyān) were dominated by descendants of the Prophet—the two first-mentioned by sayyids, the last two by Ṣabbaʿ. Hence the denomination Bilād al-Ṣai’dān-il-Ṣādān (Abū Ṣaʿdān) for the whole country. The capital is Ṣuḵb, with a landing-ground for aircraft. Numerous Bedouins also live here, mostly belonging to Bal Ḥarīṯ; this tribe also controls the important salt-mines of Ayāḏīn far out in the desert.

In antiquity this whole area was more intensely cultivated, thanks to the aqueducts, and for centuries the kingdom of Ḵatābān had its centre here, along the incense road, between Ṣabwā (q.v.) and Mārib (q.v.). Special interest is attached to the tell Ḥadjiya Ṭuḥlān a little S-W of ʿĀṣayyān. As already Rhodokanakis had inferred from the inscriptions, this is the place of ancient Timna(Tumma) (q.v.), the capital of Ṣabān (Phylai: Thomna). Thanks to the finds made here in 1950, esp. of Roman Arretine ware, its final destruction by fire can be fixed to ca. 10 A.D. The excavation of two palaces (YFSH and HDTH) has yielded a lot of inscriptions, a bronze statue of princess BRT and two fine bronze lions of Hellenistic type, with infant riders. At Ḥadjiya ʿAḵl the cemetery of Timna was found and partly investigated. Antique ruins also were found further to the south, at Ḥuṣn al-Ḥadjiya and Ḥaḡār bin ʿUmayyid. Here, at the junction of Wāḍī Bayḥān and Wāḍī Māḥliḵ, a huge cross-section of the stratified mound was made, which allowed to establish a pottery sequence back to ca. 1000 B.C., when
Bayhan — Baykara

Bayhan al-Kasab forms the central part of the Wadi Bayhan (see the preceding art.). Lying between Bayhan al-Dawla (S) and Bayhan al-Asfal (N). It includes also W. Khirr which starts in the south, to the west of W. Bayhan, until it meets the latter near the town of al-Kasab. Bayhan al-Kasab, together with Bayhan al-Asfal, now forms the Independent Territory of Bayhan in the Western Aden Protectorate. The Territory's boundaries in the S-W and N-W are a part of the 'status quo line' of 1934 between Yaman and the Protectorate. The other boundaries are, in the E the Upper 'Awallaki mountains, in the N-E the Kurab tribes and the fringes of the Empty Quarter (al-Rub' al-Khali). Bayhan al-Kasab (6,000 inhabitants) is rich in subterranean waters often found at the depth of a few yards; there are well over two hundred wells in operation and the irrigation system is adequate. Rainfall is not regular and sometimes there may be no rainfall for a number of years. The region is rich with palm and 'sib' tree groves and other kinds of vegetation. The main products and crops are dates, mahûb, figs, grapes, wheat, barley, millet, dukkan, sesame, indigo and cotton. There is good pasture land for sheep and goats and the region is famous for a breed of camels. The inhabitants form the tribe of al-Musababayn, who, have, as is evident from the dual form of the name, two main branches: Al Ahmad and Al 'Arrif. They are settled in a great number of villages. The main town is al-Kasab, also called Hisn 'Abd Allah, which is the main trading centre of the area and an important seat of administration. There is a landing ground and a wireless station at al-Kasab.

The Ashraf and Sayyids form no tribal group. They had always had the support of the Bal Hārith of Bayhan al-Asfal and of one section of al-Musababayn, the Al Ahmad, when Shafir Ahmad b. Mulshin signed a treaty with the British in 1903. The subsequent development in the internal situation of the area and the security requirements in face of the claims of Yemen and to the allegiance of the population led to the consolidation of the authority of the 'Treaty Chief', with the help of the Protectorate British authorities, over the whole territory and the tribes of W. Bayhan. In 1944 the Regent of the then minor Sharif of Bayhan entered into an agreement with the British by which he undertook to accept advice on the administration of his country and the expenditure of his revenues. The Sharif's capital is al-Nukûb, where there is a landing ground. Recently the Mus'ababayn have been treated as semi-independent and were given a minor agreement for the protection of a landing ground. There is one 'ashcha court and one Common Law ('urf) court and two elementary schools for boys, in Bayhan.

Baykara, a prince of the Oghuz (Türkmen) tribes, the Ak-Koyunlu founders of the dynasty called by the same name, are a clan of this tribe, and some historians call the Ak-Koyunlu dynasty 'Bayindir Khân Oghlanlar' or 'Al-i Bayindirîyye', and the Ak-Koyunlu state 'Dewlet-i Bayindirîyye'. It is possible that the Bayindir took part in the Saljuq conquest of Anatolia. There were many places in central and western Turkey called after them in the 9th/15th and 10th/16th centuries. No doubt most of these belonged to the Bayindir who took part in the conquest of Anatolia. We find Bayindir among the Turkmen in Syria in the 8th/14th century. The Ak-Koyunlu clan of this tribe was engaged in political activity in the Diyarbakr region in the same century. The most important Bayindir clan in the 10th/16th century was in the Tarsus region, and was engaged in agriculture. There were other Bayindir clans in the Tripoli and Aleppo regions of Syria, and in the Yemen, south of Sivas. The Bayindir of Aleppo were called by the Ottoman government to take part in the expedition against Austria in 1690. A Bayindir clan lived in the Astarabad region among the Göklen Turkmen. Members of the Ak-Koyunlu dynasty believed themselves to be descended from Bayindir, ancestor of the Bayindir tribe, and used its mark on their coins, monuments and edicts. Bayindir was also used in the past as a personal name in Turkey and Iran.

Baykara, a prince of the house of Timur, grandson of its founder. He was 12 years old at the death of his grandfather (Sha'bân 807/February 1405) so he must have been born about 795/1392-3. His father 'Umar Shâh had predeceased Timur. Baykara is celebrated by Dawlat-Shâh (ed. Browne, 374) for his beauty as a second Joseph and for his courage as a second Rustam; he was prince of Balkh for a long period. In the year 817/1414 he was granted Luristan, Hamadân, Nîhâwand and Burûdjîr by Shâh Rukh; in the following year he rebelled against his brother Iskandar and seized Shîrûz but was afterwards overcome by Shâh Rukh. Pardon ed and allowed to go to Prince Kaydû at Kandahar and Garmûr, he stirred up a rebellion there too, and was seized by Kaydû in 819 (1416-7). Shâh Rukh pardoned him again and sent him to India; nothing further is known of him. This account, which is based on Hâfir-i Abrû, does not agree with
what Dawlat-Shah tells us; according to the latter (loc. cit.) he went of his own accord from Makran to Shahr Roogh, was sent by him to Samarkand and there put to death at the instigation of Ulugh-Beg; according to other accounts he was put to death at the court of Shahr Roogh himself (in Harat). The year 819 is given by other authorities also as the year of Baykara’s death. According to Bâbur (ed. Beveridge, f. 163 b.) the name Baykara was also borne by a grandson of this prince, the elder brother of Sultan Husayn; this second Baykara was for many years Governor of Balkh.

**BAYLAKÂN,** an ancient town in Arrân (Albania) S. of the Caucasus, said to have been founded by the Sândîn Kûshâtî. Baylanak was the scene of incidents in the second Arab-Khazar war, and in 112/730 the Muslim general Sabûd b. Qamar al-Harîshî won an important victory there over the Khaṣârs.

**AL-BAYLAMÂN** [see *MADJLIS*].

**BAYLAN (BELEN),** a village situated in the Amâna mountains (Elma-Daghî) on the main line of communication from Iskenderun (Alexandretta) eastwards into northern Syria. The site seems to have had no great importance during the earlier centuries of Muslim rule, the chief town in this local area being then Baghrâs (Bâkhrâzî). The neighbouring pass of Baylan, i.e., the ancient Sûrîâ Pîlûol or ’Ama’inâ Pîlûol, was included in the *sawârîm* of northern Syria. It has received various names during the long period of Muslim domination, e.g., *abûal-malîd* (Balâdhurî), *ma’dîk Bâghrâs, bâb-i Iskandarîn* (cf. IA, s.v. Belen), and Baghrâs beli (Hâjiqî Khaţîîa). According to a *sâ’nâmê* for the vilayet of Haleb (Aleppo) dated 1320/1902-1903, the Ottoman sultan Sulaymân Kânûnî built a mosque, a *bâhîn* and baths at Baylan in 960/1552-1553. The same source also notes that the population of Baylan was increased in 1183/1770-1770 through the efforts of *’Abd al-Rahmân Paşha*, then in charge of the *sandjaq* of Adana. At the pass of Baylan in July 1832 the Ottomans suffered defeat in battle against the Egyptian forces under the command of İbrahim Paşâ—an event which has been given as an explanation of the fact that the pass is sometimes called locally Top-Yolu or Top-Boghârî (cf. EI’, s.v. Belan and IA, s.v. Belen). A number of derivations have been advanced in order to elucidate the name Baylan-Belen, e.g., that it comes from the Greek *Pîlûol,* from the Turkish bel or beyî (a depression in a mountain ridge), or from beyî, bil (a road high between two hills) used in the Arabic dual form (cf. EI’, s.v. Belan and IA, s.v. Belen). Ewliyâ Celebi notes that beyî meant in the language of the Turcomans a steep ascent. Baylân, which was, under Ottoman rule, the centre of a *bâdî* in the *eydlet* of Haleb, is now a *nâšîye* dependent on the *kaza* of Iskenderun in the vilayet of Hatay. Its population amounted in 1940 to 1,153 inhabitants, the figure for the entire *nâšîye* being 5,373 people. Cereals, fruit, silk and wines are among the more notable products of the region.

(V. J. PARRY)

**BAYNÛN,** ancient South Arabian castle and town, one of the famous Yamanite strongholds (ma’âdîfî) enumerated by Hamdânî (Şînî, 203), who gives its description in the *i ket*, book VII (ed. Müller, 41, 86 f.; Kirmîli, 66 f.; Faris, 54 f.). In legend Baynûn is said to have been built for Solomon by the qimn, just as Ghanûn (GHANDN) and Sahîn (SLHN), the castles of Şan’a and Mârib (see these articles). Baynûn is located by Hamdânî in the territory of ‘Ans (b. Madhîgî), facing the *barra* of Kawmân (six hours’ journey NNW of mount Isblî). Its ruins are at the modern village, where Qasim found ten inscriptions. Baynûn was famous for its two tunnels, cut through the rock. The Himyaritic king As’ad Tubbâ’ (= Ablkarîb As’ad, ca. 385-420 A.D.) resided here and in Şafî (q.v.) alternatively. Baynûn was destroyed, along with Ghanûn and Sahîn, by the Abyssinians under the command of Artîq, ca. 525 A.D. Bainoyun on the map of Toleomy (8° 30'14° 15') must be sought in Ḥadramawt (Wâlî Dawân) [q.v.], but this may be an error for Kaynûn.

**BAYRAK** [see *ALAM*].

**BAYRAKDAR,** a Turco-Persian term, meaning ‘standard-bearer’, applied under the Ottoman régime to various officers of both the ‘feudal’ and the ‘standing’ army and to certain hereditary chieftains of Albania. In the feudal army the alay-beyi of a each province had a baykât, an adjutant, and in the standing army one of the officers of each bûluk of the cavalry and each orta of the Janissaries.
was its standard-bearer, called usually bayrakdar, but also, synonymously, 'alamdar (‘alam being the Arabic equivalent of the Turkish bayrak, ‘flag’). The sultan’s own standard-bearer was a high official of the palace service, one of the “Albas of the Stirrup”, but he was usually called, not bayrakdar, but Mir ‘Alem (for Amir al-‘alem). Under most of the earlier Turkish Muslim régimes the ruler likewise confided the care of his personal standard to an officer of high rank, who was known either by this title, or by another similar import such as Sandjabdar.

BAYRAKDAR MUSTAFĂ PASJA [see MUSTAFĂ PASJA BAYRARDAR].

BAYRAM [see ‘Ar].

BAYRAM ‘ALLI, place on the Trans-Caspian Railway, 407 m. (57 km.) to the east of Marw, with a Persian population, now in the Marw (Mary) district of the Turkmen SSR, situated close by the oasis of Old Marw which was created by the Murghab [q.v.] and existed until the 18th century. Its ruins cover an area of some 50 sq. km. In the 19th century the region became part of the emperor’s personal domain, which existed until 1917. Today there is an agricultural research station and an agricultural technical school in Bayram ‘Alli. There are vineyards and orchards, and both silk worms and karakul sheep are bred.

Bibliography: Brockhaus-Yefron, Enciklopedicheskzy Slovar’ 4 (II A) (1891), 722; Bolshaya Sovetskaya Enciklopediia IV (1950), 54.

(B. Spuler)

BAYRAM ‘ALI KHAN, prince of Marw 1197-1200/1753-1766, a member of the ruling branch of the house of Kâğıdr which ruled there from the time of ‘Abbas I [q.v.]. In his own day, he was renowned as a valiant warrior. During a war against Murad-Bi (Shâh Ma’sûm) of Bukhârâ, he was ambushed and killed. His second son, Muhammad Karîm, succeeded him in Marw; his eldest son, Muhammad Husayn, dedicated his life to learning in Mashhad, and was regarded as the “Plato of his day” (Afżîlîn-i Wâdîl). Bibliography: Mir ‘Abd al-Karîm Bukhârî, istorie de l’Empire Ottoman (text) ed. Schefer, i (trans.) 157 f.; V. Žukovskiy, Razvalini Starago Merv (The Ruins of Old Marw), St. Petersburg 1894, 83 f.

(W. Barthold-B. Spuler)

MUHAMMAD BAYRAM KHAN, KHANA-KHANAN (Amir al-Umarî), affectionately and respectfully addressed by the emperor Akbar [q.v.] as Khan Bâbâ or Bâbâ-am ([My] Good Old Man!) during the latter’s minority, was a Turkoman of the Baharlu tribe, a branch of the Karî Koyunlu, which played a leading rôle in Diyar Bakr after the death of Malik Shâh Saljûq [q.v.]. ‘All Shukr Bég, one of the ancestors of Bayram Khan, whose sons served Abû Sa’îd Mirzâ, and after his defeat by Uzun Hasan in 837/1433-4, Ma’mûd Mirzâ, his son (Bâbûr-nâma, transl. A. S. Beveridge, i, 46), held large estates in Hamadhân, Dinawar and Kurdistan. The family to which Bayram Khan belonged had always been in the service of kings and princes; his grand-father Yâr ‘All Bég Balîlî, who had settled in Badakhshân, was a servant of Bâbûr (Bâbûr-nâma transl. A. S. Beveridge, i, 91, 189). His father, Sayî ‘All Bég, was, according to Firuzoga (Bombay ed. 250), governor of Ghazna and on the death of Bâbûr had entered the service of Humâyûn.

Bayram Khan was born in Badakhshân (according to some at Ghazna, which is most probable) but lost his father at a very early age. He then migrated to Bâlîh where he received his education, which later events prove to have been sound and thorough. A widely-read man, well-groomed in Court manners, he joined, at the age of 16, the service of Humâyûn, who had been appointed governor of Badakhshân by his father in 936/1529. At that time Humâyûn happened to be in Kâbul. He accompanied him to India and participated in the disastrous battles of Câwâs (946/1539) and Kannawad (947/1540) which resulted in the complete rout of Humâyûn’s troops. Finding the enemy in hot pursuit he took refuge with the sâmilinâr of Sambhâl which Humâyûn held as a sâmilinâr chief who asked him either to join his ranks or leave Sambhâl. Bayram Khan refused to cross over and fled towards Gujârât. A clever ruse played by his companion, Mir Abu ‘l-Kâsin, who at that time was the commandant of Gwâlor, saved him from disgrace and sure capture. Abu ‘l-Kâsin, however, lost his life in the bargain. Bayram succeeded in reaching the Court of Sultân Ma’mûd of Gujârât, who not only offered him protection but also took him into his service. He, however, bided his time and, on the pretext of going on a pilgrimage to Mecca, was allowed to proceed to Sûrat. Availing himself of this opportunity he turned towards Râjgîptûnâ and crossing the desert of Sind, joined his master, Humâyûn, at the township of Dîjân (950/1543), now in ruins, when the fugitive emperor was making desperate efforts to regain his lost throne. Bayram was with him when he went to Kandâhâr (950/1543) to seek help from his brother Mirzâ ‘Askarlî, and witnessed the rude and churlish behaviour of Tardi Bég when this nobleman was asked to lend his horse to the deposed emperor for the use of his wife, Hamûda Bânû Bêgam, mother of the infant Akbar, at the time of their flight from the inhospitable city.

At the Court of Shah Tahmâsp of Iran, whose help was sought in men, money and material Humâyûn was forced to seek to regain his lost crown, Bayram demonstrated unflinching loyalty towards his ill-starred master by politely refusing to accept the service of the Shâh, who was impressed by his gallantry and family connexions. During his Indian campaigns Bayram won many battles for Humâyûn, as commander-in-chief of the Imperial army (961/1554), crowning his series of successes with the crushing defeat inflicted on Şikandar Sûr at Mâchhûwâra, near Sirhind, in 963/1555. Contrary to what had been the practice so far, Bayram Khan ordered that the women and children of the vanquished Afghans should neither be molested nor enslaved, as both the acts were un-Islamic. This victory decided the future of Humâyûn who was now reassured of the throne of Hindustân and owed his restoration, to a large extent to the loyalty and devotion of Bayram Khan, who was appointed in 962/1555, apparently as a token of appreciation of his meritorious services, as the official guardian (alâdit) to young Akbar, then 13 years of age, and given the official title of Khan Bâbâ. Thereafter Bayram accompanied his ward to the Pandjâb, of which Khan Akbar had been appointed the governor. When the news of Humâyûn’s accidental death (1556) reached Pandjâb, Bayram was at Kalânawar (Dist. Gurdaspur, India) engaged in mopping-up operations against the remnants of Şikandar Sûr’s defeated army. He again saw the hard situation, and without loss of time proclaimed Akbar as the emperor, arranging his coronation on
an improvised brick-throne, still extant at Kalanaw.

Soon after wards Himu, originally a Sūr troop, attacked Delhi, and Tārdī Bēg, the Mughal governor, fled from the city without offering the feebile resistance. Bayram, who was now all-powerful, ordered the execution of Tārdī Bēg, apparently as a lesson to others but most probably to avenge the insult which that officer had had the audacity to offer to Humāyūn in the hour of his distress when he was fleeing from Kandahār. Fīrūghtā justifies this murder, although on purely political grounds. In 964/1556, when Himu clashed with the Imperial forces at the battle-field of Pānpat, Bayram scored a clear victory and, with the tacit approval of the monarch, killed the wounded general. Bayram has been adversely criticised for this callousness towards a fallen foe, but it should not be forgotten that in despotic monarchies, decapitation was the order of the day, especially in the case of rebels, rivals to the throne or State enemies; an example is the execution by Awrangzib of Dārā Shukhūb, whose head was publicly exhibited in Āgra. Further, it was idle to expect any mercy from Bayram towards a low-caste upset who nurtured the ambition of wearing the crown, and who had had the audacity to oppose the Emperor in person. With the defeat of Himu and the break-up of the Afghan army, the crown of Hindūstān fell into the lap of Akbar like a ripe apple. Bayram was now at the height of his power and practically ruled the empire in the name of his ward. Akbar, however, had begun to show signs of resentment towards the Protector, who interfered in his boyish pleasures and desired him to maintain a princely demeanour. His marriage in 965/1557 to Salīma Sultan Bēgum, a cousin of Akbar and the daughter of Humāyūn’s sister, Gulrukh formally introduced Bayram into the royal family, thus adding to his prestige and personal glory. This marriage was celebrated with great pomp and show at Dijullund (Dījamāndh), on (g.v.), his way back from Māṅkot (now Rāmkot, in Dījamāndh), where earlier in the same year Bayram, in a joint command with Akbar, had compelled Sīkandar Sūr to surrender after a long siege. Prior to this marriage to Salīma, which was purely of a political character, he had been married to the daughter of Dījamā Khan, a Mēwāt chieftain, who gave birth to Mirza ‘Abd al-Rahim Khan, Khan-i Khānān (g.v.), only four years before his death. The Mēwāt territory, which was Tārdī Bēg’s assign- ment, had already been conferred by Bayram on one of his confidential servants, Mullā Pīr Muḥammad Shīrwānī.

Bayram committed a tactical mistake in appointing Shāykh Gādāl Kāmbōh of Delhi, a bigoted Shīfī, as saḥūr al-ṣudūr in 966/1558-9. This caused great resentment among the people and the Tārānī nobles, who were almost all of them Sunnīs, and al-Badā‘ūnī (Eng. trans. ii, 22-4) makes it the peg on which to hang his ‘most bitter gibes and venomous puns’. This, coupled with his other indiscreet acts, such as the elevation to State offices of members of the Shīfī sect, the execution of Tārdī Bēg of the Sunnī persuasion, the non-allocation of the privy purse to the Emperor, whose needs were fast multiplying with his increasing years, the meagre allowances for the royal household, and his own arrogant behaviour and over-estimation of his services, brought about a change in Akbar’s attitude towards the Protector and he began to look for an opportunity to throw off the trammels of tutelage. Māhmūn Anāqa, Akbar’s wet-nurse, who, at the head of a small but powerful Palace clique, had been secretly striving to compass Bayram’s ruin, played no mean a rôle in estranging the ward from the guardian. Bayram realising that the scales were weighted against him, decided to clinch the issue by force of arms, and, on the pretext of leaving for Mecca, came to Dijullund with the intention of taking it, after lodging his family in the fort of Bhattinda. He was defeated in a pitched battle by the Emperor’s forces and was made to return the insignia of office. Deprived both of his office and the title of Khan-i Khānān, now conferred on Munīr Khan, Bayram saw no way out but humbly to submit, and was pardoned by Akbar. Dejected, disappointed, and fallen from grace, Bayram, in fulfilment of his earlier intention, set off for Mecca, but was treacherously murdered by a vengeful Afghan enemy, Muḥārrak Khan Lūhānī, whose father had been killed in the battle of Māchīwārā (969/ 1565) Bayram was killed while encamped at Patan (Anhibāwā), on 14 Dijumādā I 968/31 January 1561. His camp was plundered and his family, including the 4-year old Mirzā ‘Abd al-Raḥīm Khan, reached Ahmadābād almost penniless. The commandant of Patan, Mūsā Khan Pūlādī, who had hospitably received Bayram Khan, did not even give the dead hero, formerly so wealthy, a decent burial. Some poor and God-fearing people buried the former Khan-i Khānān, whose dead body, in accordance with his wishes, was transferred in 971/1563-4 to Mashhad from Delhi, where it had been brought from Patan for a temporary and modest burial. Now he lies buried in a high-domed tomb in the vicinity of the mausoleum of Imām Mūsā al-Riḍā.

An accomplished scholar, a good poet in Turki and Persian, a connoisseur of art, a liberal but orthodox Shīfī, Bayram Khan was a truly great man who patronised the ‘ulamā? and men of letters, no less than poets, artists, musicians, singers and craftsmen. He has received a generous tribute from even a carping critic like al-Badā‘ūnī for his qualities of head and heart. His divān was published at Calcutta in 1910.

Akbar, who like his father owed his throne to Bayram Khan, tried to atone for his ingratitude by bringing up Mirzā ‘Abd al-Raḥīm Khan, his orphaned son (who later on became Khan-i Khānān and is better known to history than his father) and by marrying Salīma Sultan Bēgum, his widow. If the execution of Tārdī Bēg is a stain on the good name of Bayram Khan, his undignified dismissal by Akbar is no less a blot on the escutcheon of the ‘Great Mogul’.

MUHAMMAD BAYRAM KHAN — BAYROT 1137

having been found there. It is as a port on the Phoenician coast that the agglomeration appears under the name called Tarsus in the Greek "Amarna (14th century B.C.), at that time a modest settlement long since eclipsed by Byblos (Djubayl). During an obscure period of twelve centuries Beruta underwent the passage of armies coming up from Egypt or descending from Mesopotamia, among whom was Ramses II in the 13th century and Asarhaddon, king of Assyria, in the 7th century. Towards 200 A.D., Antiochus III the Great gained a victory over Ptolemy V and annexed Bayrut to the Seleucid kingdom and Syria. The town, for a time called Laodicea of Canaan, was destroyed about 140 B.C. by the Syrian usurper Tryphon. Despite this disaster the port saw a great rise owing to the commercial relations with Delos, the Italians and the Romans; Bayrut then found its vocation as a link between Orient and Occident.

Taken by Marcus Agrippa in the name of the Emperor Augustus, the town was rebuilt, embellished by remarkable edifices and peopled by veteran Roman legionaries. In 14 B.C. it was raised to the rank of a Roman colony (Colonia Julia Augusta Felix Bertus). Very rapidly Beritus became a great administrative centre (Herod the Great and his successors were resident there), an important station of commerce and exchange, and a well attended university city. Its school of law, from the 3rd century A.D., enjoyed particular acclaim and by its brilliance rivalled Athens, Alexandria and Caesarea. The increase in population made it necessary to construct for its water supply an important aqueduct (Kandir Zubayda) in the valley of the Magoras (Nahr Bayrut).

By the end of the 4th century Bertus was one of the most important cities in Phoenicia and the seat of a bishopric. A violent earthquake, accompanied by a tidal wave, destroyed Bayrut in July 551. Justinian had the ruins restored, but the city had lost its splendour, and it was a town without defences that the troops of Abū 'Ubayda took when they entered in 14/635 the most important of the Roman cities of the Orient.

Under Muslim domination a new era began for Bayrut. The Umayyad caliph Mu'awiya had colonists brought from Persia to repopulate the city and its surrounding area, sericulture prospered again, and commercial relations resumed at first with the interior (Damascus) and later with Egypt. In the first centuries of Islam Bayrut was considered a ribā', and the holy imām of Syria, Al-Awzan, installed himself there in 157/774. In 364/975 John Tzinises conquered the city, but shortly after the Fatimids retook it from the Byzantines. The Arab geographers of the 4th and 5th/10th and 11th centuries all mention that the city was fortified, and subject to the diwan of Damascus.

The Crusades brought fresh troubles. In 492/1099 the Crusaders coming from the north along the coast did no more than provision themselves at Bayrut; they returned there after the capture of Jerusalem. In 503/1110 Baldwin I and Bertrand of St. Gilles blockaded the city by land and sea. An Egyptian fleet managed to get supplies to the besieged, but a reinforcement of Pisan and Genoese ships enabled them to launch an assault and take the city on 21 Shawwal 503/13 May 1110. In 1112 nomination of the first Latin bishop took place, Baldwin of Boulogne, who relieved the patriarch of Jerusalem, since in the Greek ecclesiastical organisation of the 11th century Bayrut had been subject to Antioch. The Hospital-
bers built the church of St. John the Baptist, which
became the mosque of Al-‘Umari. In Rabic II 578/
August 1132, Salah al-Din sought to separate the
County of Tripoli from the Kingdom of Jerusalem
by retaking Bayrut, but it was not until the second
attempt in Djamdād II 582/August 1137 that the
city capitulated. In Dhu ‘l-Ka‘d 593/September
1197, Amalric of Lusignan took the city, whose
Ayyūbīd garrison had fled. The Ibelins restored the
defences of Bayrut and renewed its brilliance
throughout the Latin Orient. In 1231 Riccardo
Filippigari occupied the city, but not the castle,
in behalf of the Emperor Frederick II.

Shortly after the accession of the Mamlūks at Cairo,
the lords of Bayrut were reduced to treat with them
in order to preserve their independence with respect
to the other Franks. In 667/1269 Baybars gave a
guarantee of peace. In 684/1285 Sulṭān Kālūn
granted a truce which allowed a resumption of
commercial activity, and finally, on 23 Rajab 690/
23 July 1291, the Amir Sandjar Abū Shudjāh’s,
coming from Damascus, occupied Bayrut in the
name of Al-Malik Al-Ashraf Khālid.

Under the Mamlūks Bayrut was an important
wilāya in the province (dānd) of Damascus, and its
governor an amir tašalīḥiyya. During the entire
Middle Ages, possession of Bayrut was a powerful
trump card, for one could procure there two rare
“strategic materials”, wood, from the pine forest
south of the city, and iron, from the mines nearby.

In the 8th/14th century, commerce was troubled,
the port having become the scene of rivalries between
Genoese and Catalans, and the Mamlūk princes
reinforced its defences, Tanghiz (744/1343) and
Barkūk (784-791/1382-1389) each having a tower
constructed. In the 9th/15th century, Bayrut con-
tinued to be the meeting-place of western merchants
who came there seeking silks, while fruit and snow
were exported to the court at Cairo.

At the beginning of the 10th/16th century, the
Frankish merchants were subjected to the extortions
of the semi-autonomous governors nominated by the
Porte. Under Faḥhr al-Dīn (1595/1634) the city saw
a brilliant period, and relations were renewed with
Venice. In exports silks surpassed citrus fruits, while
rice and linen cloth was imported from Egypt.

In the middle of the 18th century, Bayrut was the
most heavily populated coastal city after Tarābulūs,
the nucleus of the population being the Maronites
protected by the Druze amir. Suffering the counter-
attacks of the Russo-Turkish war, Bayrut was
bombarded several times and finally occupied by the
Russians in October 1773, until February 1774.

From 1831 on, despite the competent administration
of Baḥrī the Great (1788-1850), the campaigns of Ibrāhīm Pāsha, which terminated in the bombarda-
ment of Bayrut by a combined Austrian, English and
Turkish fleet in 1840, ruined commerce. A new era
began in 1860. The massacre of the Christians in Syria
led to a major exodus towards Bayrut, and the tiny
city of 20,000 acquired a deep Christian imprint.

Having begun about a century ago, the rise of
Bayrut continues. The city has developed very
rapidly and for several decades has surpassed the
brilliance of its Roman period. After having been,
during the French Mandate (1920-43), the residence
of the High Commissioner of France for the States
of the Levant, Bayrut became the capital of an
independent state and the seat of Parliament and the
Administration of the country. The extremely
heterogeneous population, predominantly Arab, is
more than 200,000 (1958), which is doubled during
the week with the daily influx of villagers, workers
and merchants from the surrounding areas.

Three universities (American, French and Leba-
nese), numerous academic establishments of every
nationality, and a National Library make of Bayrut
one of the most important intellectual centres of the
Arab Middle East. The city is also a centre of commerce
and exchange. A port continually expanded since
1893 and linked by railway to Syria and Jordan
permit important transactions (2,500,000 tons in
1950), despite the competition of Haifa and, more
recently, Lattakia, the port of Syria. The volume of
transactions has led to the creation of a Stock
Exchange, and the foundation of branches by all
the large international banks. An aerodrome of
international class (Khalād) permits contacts with
the entire world. A centre of transit and distribution,
Beirut is by vocation a link between Orient
and Occident.

BAYSAN, a little Palestinian township in the
valley of the Jordan, situated 30 kms. (18 miles)
south of Lake Tiberias and 98 ms. above sea-level
on a terrace raised 170 ms. above the low-lying
ground through which, some distance away, the
Jordan winds its way. Avoiding thus the extreme
tropical heat which reigns elsewhere in the Ghawr
[see], it has all the same a hot and humid climate
which Arab geographers did not fail to criticise,
and the same time depleting of its water (they nevertheless point out the merits
of ‘Ayn al-Fulūs, a well which a wide-spread tradition
regards as being among the four springs of Paradise).
Irrigation formerly made possible the cultivation of rice
which was the country’s wealth at the time of
al-Makdisi, whilst of the palm-groves, mentioned in
traditions, the geographer Yāḥūt, in the 7th/13th
century, observed only two single palm trees. But
Baysan, thanks above all to its remarkable com-
mmercial and strategic position on the main stream of
the traffic joining Damascus and the interior of
Syria to Galilee and thence to Egypt and the
Mediterranean coast, has succeeded in preserving
its urban nucleus up to the present day, despite
innumerable historical vicissitudes.

The settlement of this site, proved for the period
before the 3rd millennium by the excavations of Tall
al-Husn which have succeeded in reaching the
calcilitic level, goes back indeed to very far-off
times. We know of the Egyptians’ interest in the
ancient Bethšan or Bethshe‘an, whose name they
transcribed as Bayrût and which they annexed for
three centuries after the victory of Thutmoses III in
the plains of Megiddo, leaving numerous traces of
their occupation. Then this important village, equally
coveted by Philistines, Israelites and Madianites,
which at one time formed part of the kingdom of
Solomon but remained always hostile to Judaism, became in the Hellenistic and Roman periods one of the most important cities of the Decapolis under the name of Scythopolis. Hellenism flourished there and the success which Christianity attained later was confirmed by the construction of various churches and monasteries. Its bishop was Metropolitan of Palestina Secunda and the celebrated hagiographer, Cyril of Scythopolis, was born there.

Exposed to the first Arab attacks, for as early as 13/634 the troops of Khalid b. al-Walid attacked and annihilated a Byzantine army not far away, the town, which now resumed its original native name softened into Baysan, was definitely occupied in 15/636 at the time of Shurabbil b. Hasana’s conquest of the Jordan region and was certainly visited by Abū ’Ubayda b. al-Diarrāh whose tomb according to some authors is situated there. As administrative centre of one of the districts of the diwan of al-Urdum, it seems to have prospered peacefully among his gardens until it was attacked by the Franks of the First Crusade who annexed it to the Latin Kingdom of Jerusalem after it had been taken by Tancred in 492/1099. They created the barony of Bessan but transferred the episcopal see to Nazareth. Its history continued to be a troubled one. Muslim attacks ended in its reconquest by Salāh al-Din in 583/1187 and later there was a new raid by the Franks of the Fifth Crusade who plundered it in 614/1217. The invasion of the Mongols who were defeated not far away at Ayn Djalfūt (q.v.) in 658/1260 was a heavy blow to it but later on in the time of the Mamluks it was to become the capital of a wilāya in the second southern frontier district of the province of Damascus. At this time the caravanserai of Salār was built in its immediate neighbourhood on the route of the present-day railway. This was used by the mounted mail couriers whose itinerary was modified in this way by the initiative of the chief of the chancellery, Ibn Faḍl Allāh, in 741/1340.

BAYSÓNGHOR, GHIYĀTH AL-DIN, son of Shāh Ruḥī and grandson of Timūr, was appointed by his father in 820/1417 to the office of chief judge at his court; in 823/1420 on the death of Kara- Yūsuf, he took possession of Tabriz and was appointed governor of Astarābād in Safar 835/October 1431, but he never ascended the throne; the astrologers having predicted to him that he would not live more than forty years, he gave himself up to dissipating life and died at Harāt on Saturday, 7 Dījūmād 837/19 December 1433, at the age of thirty-six. He was buried in the Kaṣr-al-ʿAbbās in the Mausoleum of Princess Gawhar-Šāhīd. An artist and patron of the arts, he was a designer and an illuminator; in the library which he had founded, forty copyists, pupils of Mīr-ʿAllī, inventor of the nastaʿlīq script, were occupied copying manuscripts. His example had a considerable influence in the development of the art of painting in Persia in the period of the Timūrids. In 829/1425-6 he caused a critical edition of the Shāh-nāma of Firdawṣī to be undertaken and a preface to be written to this work, the longer of the two which we possess.

CL. HUART

BAYSÓNGHOR, the name of another prince, of the Ak-Koyunlu dynasty in Persia, son and successor of Shāh Ruḥī; he only reigned for a short period from 806-7/1402-3 and was overthrown by his cousin Rustām. (W. BARTHOLOD)

BAYT, the common Semitic root of the word for “dwelling”, whether the “tent” of the nomads, or the “house” (stone, wood or brick) of sedentary peoples. It may sometimes designate a “sanctuary”: thus in Arabic with the article al-Bayt is applied par excellence to the holy place at Mecca, also called al-Bayt al-harām (sacred dwelling) or al-Bayt al-sabīb (ancient). Geographical names composed with the root are equally frequent, and the first element is often found reduced in Syro-Palestinian toponomy to the prefix B-, derived from the Aramaic (Syriac) Bē, also known from Canaanitic, to judge by several examples of it in Biblical Hebrew (Bē’er, etc.).

In Arabic, the definitions, always detailed, of the lexicologists limit the term to a dwelling of medium dimension, perhaps suitable for one family. The sense of “family” is found precisely in all of the Semitic languages. As, by contrast, BAYT does not figure among the technical designations of tribal subdivisions, one might see there an argument in favour of a classical distinction between the family, however large, and these other various groupings, if unfortunately the same metonymical association were not to some extent encountered in all languages, too generally to be probative. (J. LECQ)
BAYT [see 'Arab']

BAYT DABRIN, or sometimes DABRIL: a large Palestinian village of the Shephelah, situated at an altitude of 287 m., southwest of Jerusalem, on the northern borders of the limestone mountains of Judea and the coastal plain, in a region rich in quarries and ancient remains which attracted the interest of Arab authors. Called Begabri by Josephus who regarded it as a village of Idumaea, and Betogabri by Ptolemy and the Tabula Peutingeriana, it was a successor to the town of Maresha/Marisa, often regarded as the capital of the region before being driven back under the pressure of Edom, and who bore a name synonymous with 'troglydotes'. This name was translated into Greek through a play of words in Hebrew as 'town of the free men' or Eleutheropolis when Septimus Severus gave the jus italicum to this locality in 200 A.D. In the middle ages it resumed its original name which appears in the Talmudic writings under the form of Beth Gabrin, and was twisted by the Crusaders into Beth Gebrin, Bethigebelin or Gibelin; it seems that a play of words on the Arabic دابرین گلخان then allowed to identify the place with the legendary 'City of the Giants', according to a tradition which is referred to by al-Harawi and which describes the story of Mūsā related in Kurān, v, 24/21-25/22 as having taken place there.

Minting its own money and commanding a vast region, the city of Eleutheropolis enjoyed great prosperity in ancient times as is proved by the Romano-Byzantine mosaics which have been discovered there. Its importance diminished in Arab times although after its conquest by 'Abd al-As during the Caliphate of Abū Bakr, it continued to be the capital of a district within the military دیوان of Palestine and a trading-post on the road between Jerusalem and Ghazzah. However, bitter local fighting seems to have occurred in this region which was mainly populated, according to al-Ya’qūbī, by the دیویشام [q.v.], and "according to the account of a monk, Stephen of Māl Eultheropolis was completely destroyed in 790 in the course of a war between Arab tribes" (Fr. Buhl), a statement which should certainly be accepted with some reservations. Indeed a little later al-Makdisi describes Bayt Dabrin as a commercial centre for the district of Dārūn [q.v.], and the military value of its situation caused the Crusaders, who had first destroyed it, to build a citadel there towards 1134 which was put into the charge of the Knights Hospitallers, to safeguard the frontier of the kingdom of Jerusalem on the Egyptian side and to stop Muslim raids which came principally from the direction of 'Askalān [q.v.]. After having suffered some damage when Sa'laḥ al-Dīn retook it in 583/1187, it still remained a fortified town in the Mamluk period, depending directly from the محلة of the Ghazza district in the coastal frontier area of the province of Damascus.

J. Sourdel-Thomine

BAYT AL-FAKIH, (i.e., "the Abode of the Jurist"), a town of c. 10,000 population located at 14°30' N., 43°16' E. in Tihāmat al-Yaman. The town is also called Bayt al-Fakih al-Saghīr, to distinguish it from Zaydiyya or Bayt al-Fakih al-Kabīr to the north near Bājdil, and Bayt al-Fakih Ibn Udjayl after the name of the jurist around whose tomb the town has grown. The town in 1944 was the capital of the ٍرود of Bayt al-Fakih, comprising four الن‌یس in the لیس of al-Ḥudaydah. The four الن‌یس are: Nāhiyyat Līğān, Nāhiyyat al-Hussaynīyya, Nāhiyyat Bani Saʿīd, and Nāhiyyat Bayt al-Fakih, each of which is governed by an ٍن‌یل, with the courtesy title of بیت if he is not a sayyid. The لیس of al-Ḥudaydah falls under a royal prince.

Bayt al-Fakih may be connected with pre-Islamic history through the migration of the tribe of al-Azd from Mārib after the breaking of the dam. Tradition alludes to the temporary settlement of the tribe near a watering-place called Ghassān, perhaps between Wādī Rima and Wādī Zābīd. A portion of al-Azd later moved to the Syrian borders and established the state of Ghassān. In the 8th/9th century, Ibn Baṭṭūṭa mentions the name of the village near the tomb of Ibn Udjayl as Ghassānīna, but this name is unknown today. The classical Arab geographers mention neither Ghassānīna nor Bayt al-Fakih.

It seems likely that the present village of Bayt al-Fakih arose shortly after the death of the ḥabīb, Abu T-ʿAbbās Ahmad b. Mūsā b. ʿAlī b. ʿUmar b. Udjayl, in 690/1291 due largely to pilgrimages made to his grave and the miraculous powers attributed to the invocation of his name. In the 11th/12th century the town increased its prosperity as a coffee-centre for the port of Mocha and an East India Company factor, Revington, suggested the establishment of a factory there in 1659. During the 19th/20th century, the Yamanī Imams took monthly pilgrimages from Bayt al-Fakih to the north near Bājdil, and Bayt al-Fakih resumed its provincial, scholarly life, amid the anarchical political conditions in Southern Arabia.

The unsettled state of this area had been due largely to the fractious independence of the tribe of al-Zārānī centered on Bayt al-Fakih. With a fighting strength estimated at 10,000 men, the tribe has steadfastly refused to accept government control for long and was strong enough in 1914 to levy road tolls on Ottoman infantry. As recently as 1947 the tribe cut down to the last man a punitive force sent by the Imam.

BAYT AL-FAKIH — BAYT AL-MAL 1141

BAYT AL-ḤIKMA, “House of Wisdom”, a scientific institution founded in Baghdād by the caliph al-Ma’mūn, undoubtedly in imitation of the ancient academy of Dūriyāsābūr. Its principal activity was the translation of philosophical and scientific works from the Greek originals which, according to tradition, a delegation sent by the caliph had brought from the country of Rūm. Its directors were Sahl b. Hārūn [q.v.] and Salm, assisted by Ṣaḥīl b. Hārūn. It included an important staff of translators, of whom the most famous were the Banū ‘l-Munāḍātim, as well as copyists and binders. It appears in fact that the library so constituted, and often called Ḥizānat al-ḥikma, had already existed in the time of al-Raṣīd and the Barrakūdās who had begun to have Greek works translated. Al-Ma’mūn may have only given a new impetus to this movement, which was to exert a considerable influence on the development of Islamic thought and culture (see *Arabiyā, B. III, 1*).

To the same institution were attached astronomical observatories (marṣad), one installed at Baghdād, the other at Damascus, where Muslim scholars devised in particular new tables (ṣīḥ [q.v.]), correcting the ancient ones furnished by Ptolemy.

The Bayt al-ḥikma properly so called, does not appear to have survived the orthodox reaction of al-Mutawakkil, although there is subsequent mention in ʿIrāq, during the ʿirdk/ghiyth century, of several scientific libraries, owing their existence to private initiative and the fact that the caliph al-Muʿtadīd had sought to favour the work of various scholars whom he had installed in his palace. Only the Fāṭimids were later to found similar official academies, of which the most important was the dār al-ḥikma [q.v.] established by al-Ḥākim in 395/1005. *Bibliography: Fīhirīs, 5, 10, 21, 120, 145, 235, 274; Yākūt, Ḥiṣād, iv, 258-259, v, 66-68; Khīṭṭ, ed. BAYT LAHM, large Palestinian village and celebrated centre of pilgrimage situated in the limestone mountains of Judaea 800 m. above sea-level and approximately 10 kms. south of Jerusalem, corresponds to the ancient Bethlehem of biblical fame. Honoured and visited by Christians from the 4th century on, it became equally venerated by Muslims as the birthplace of ʿĪsā b. Maryam [q.v.]. The Arab geographers who never failed to refer to this fact and who often expressed admiration for the Byzantine basilica which (founded by Constantine in 325 and restored under Justinian in 525) had been built there, commented equally on the miraculous palm of Kurān, xix, 25, the tomb of David and Solomon which Christian tradition had already located in the Grotto of the Nativity, and the mīhrāb of ʿĪmar b. al-Khaṭṭāb, traditionally the spot where the second Caliph had prayed at the time of his journey through Palestine after his conquest. This remarkable reputation from the religious point of view did not however help the village of Bayt Lahm, too close as it was to Jerusalem, to develop in impetus, and the attention paid to it by the Franks of the First Crusade, who built a fortress there after they had annexed it in 1099, and in 1110 got permission to set up a bishopric there, did no more than give it a brief spurt of life. Occupied by Salāh al-Dīn when he reconquered Palestine in 583/1187, then included in the temporary retrocession of the Treaty of Jaffa concluded between al-Malik al-Kāmil and Frederick II, the place continued then and later to vegetate. However the intensification of the relations between its Christian population and the West permitted it finally to achieve its present position, that of a small town with a feeble Muslim minority (the Muslims never recovered from the repression of which they were the victims in 1834 after they had revolted against Ibrāhīm Paša), where religious institutions and modern houses predominate, ranged in a semicircle on the side of the hill round the platform surmounted by the famous basilica. This sanctuary of the Nativity whose archaeological interest has already been emphasised, has been the object of successive restorations which have left the primitive arrangement of its central part with its four-fold rows of columns untouched, but have transformed especially the decoration which gives valuable information about the evolution of the art of the mosaic in the high middle ages.

BAYT AL-MAKDIS [see AL-KUDS].

BAYT AL-MĀL, in its concrete meaning “the House of wealth”, but particularly, in an abstract sense, the “fiscus” or “treasury” of the Muslim State.

I. The Legal Doctrine. ‘Bilāl and his companions asked ʿUmar b. al-Khaṭṭāb to distribute the booty acquired in Iraq and Syria. “Divide the lands among those who conquered them”, they said, “just as the spoils of the army are divided”. But ‘Umar refused their request... saying: “Allāh has given a share in these lands to those who shall come after you”’. (Kitāb al-Khadrij, 24, Le Livre de l’Impôt Foncier, 32). In this alleged decision of ‘Umar lies the germ of the notion of public as distinct from private ownership and the idea of properties and monies designed to serve the interests of the community as a whole. Coupled with the institution of the dawān [q.v.] in 20 A.H. it marks the starting point of the conception of the bayt al-ʿmal as the State Treasury or fiscus. Previously the term had simply designated the treasury where money and goods were temporarily lodged pending delivery to their individual owners. See *Fīhirīs*, *Institutions du Droit Public Musulman*, i, 216.)
Organisation. All the various officials derive their powers by delegation from the Imam who is the head of the bayt al-māl. In Sunni law a firm distinction is drawn between the public authority with which the Imam is invested in this respect and the personal control of his privy purse. (See Tyan, op. cit., i, 391 f. and ii, 195. Also Mez, Renaissance, 113-116 (Eng. tr., 120-122), for the position in practice.) This distinction does not apply to the same extent in the law of the Twelver Shi'a, where the ownership of certain properties which in Sunni law belong to the community as a whole is vested in the person of the divinely inspired Imam. (See Querry, Droit Musulman, i, 178, 337. Baillie, Imameca Code, 362).

The actual collection and distribution of State revenues is the responsibility of the Sāhib bayt al-māl who controls the several officials in charge of the various categories of revenue listed below. Freedom, Islam, moral integrity (sadāqa) and competence are essential qualifications for such appointments, and in addition the quality of āfāfh bāyda (q.v.) is required for those offices which involve discretionary assessment or expenditure. Minor agents of collection or delivery may be slaves, or dhimmīs when dealing only with their co-religionists. The records and accounts of Treasury business are dealt with by a special administrative department under the control of the Kāṭib al-dīwān, for which office sadāqa and professional competence are the only two essential qualifications.

Within this skeleton framework the nature and scope of individual offices is a matter for the discretion of the Imam. "Neither for general nor for particular appointments does the Sharī'a define the terms" (Ībn Farhān, Taḥṣīl al-Hukūm, ii, 141, 158).

Sources of Revenue. Not all State revenues are "assets of the Treasury" (hubūḍ bāyta bāyta al-māl) as such. These latter may be defined as those monies or properties which belong to the Muslim community as a whole, the purpose to which they are devoted being dependent upon the discretion of the Imam or his delegate.

Thus the only portion of the ghanīma (q.v.) which qualifies as one of the assets of the Treasury is that fraction of the fifth (al-khums) — which term may here be taken to include the levy on mined products and treasure trove — which is the share of Allāh and the Prophet and which is to be spent in the interests of the community as a whole. The remainder of the fifth is earmarked for specified classes — the relatives of the Prophet, orphans, poor and travellers — and as such is removed from the discretion of the Imam. Similarly the proceeds of sadāqa or zakāt (q.v.) are destined for particular classes of the community and though, like ghanīma, these monies may be controlled by Treasury officials or lodged in the vaults of the Treasury pending the determination of the entitled recipients, ownership, from the moment of payment, vests in the entitled recipients and not in the bayt al-māl. Even the Hāfiz jurists, who allow the Imam to apportion out the sadāqa at his discretion to one or more of the specified beneficiaries to the exclusion of the rest, draw a clear-cut distinction between māl al-sadāqa and māl al-Muslimīn. (See Kāṭib al-Khārāṣī, 80, 149, 187).

The primary source of the Treasury's income is, then, the revenues collectively termed fāy, i.e., the takāz of khārāṣī and derived property. The position of the tax 'ushr (q.v.) is somewhat confused. Some jurists appear to regard it as fāy and others as sadāqa, while in one view it is treated as sadāqa if paid by Muslims and as fāy if paid by non-Muslims. Among the subsidiary sources of income are:

(i) Property with no known owner — e.g., runaway slaves when apprehended, or property found in the possession of arrested brigands. The proceeds from the sale of such property if movable, or its exploitation if immovable, belong to the bayt al-māl.

(ii) The property of apostates. While the great majority of jurists maintain that all the available property of apostates belongs to the bayt al-māl, the Hāfiz jurists divide it between denying the claim of the Treasury altogether and restricting it to such property as was acquired after apostacy.

(iii) Estates of deceased persons. [See Mīhrāj]. The Treasury is especially favoured in this respect in Mālikī law, where it will always succeed, as residuary heir, in the absence of any entitled 'asāba and such Kurānic heirs as would exhaust the estate by the sum of their allotted shares. With no heir of either category the Treasury is assured of at least two thirds of the estate, since bequests may not exceed in value one third of the nett estate. In the law of the other schools, however, the presence of any Kurānic heir or blood-relative will exclude the Treasury, and in Hāfiz law, failing such heirs, testamentary disposition may embrace the whole of the estate. Here then the Treasury only succeeds by a species of escheat.

Expenditure. Claims upon public monies (all, according to Māwardī (al-Ākhām al-Sulānīyya, 367 f.), into two main categories.

(i) Claims in regard to which the liability of the Treasury is absolute. Such claims are either for services rendered to the State — e.g., the stipends of the armed forces, the salaries of State officials, the price of equipment purchased — or for expenditure which is a specific obligation upon the State — e.g., the duty to maintain its prisoners. The satisfaction of such claims is the first obligation upon the Treasury and payment may only be deferred when (as is the case with an ordinary debtor) the Treasury is insolvent. At the discretion of the Sāhib bayt al-māl loans may be raised to satisfy these claims.

(ii) Claims in regard to which the Treasury's liability is dependent upon the existence of the necessary funds and the satisfaction of all claims in the previous category. Here the expenditure involved is for purposes of the public welfare and interest — e.g., the construction of roads, water supplies, the repair of damage to kharāṣī lands.

When all outstanding obligations have been met the Hāfiz jurists advise that any surplus should be preserved to insure against possible future need, while the Shāfī's maintain that any surplus should be expended immediately in the public interest. Beyond these general principles the law does not go, content to leave the detailed determination of the public interest to the discretion of the Imam, with the one proviso that public funds are not to be devoted to purposes prohibited by the law — e.g., gambling, music etc.

Procedure. The administrative work of the dīwān (analysed by Māwardī, op. cit., 370-375) raises three main legal issues.

(i) Legal proof. While it is a fundamental principle of Sharī'a law to deny any validity to written evidence, in Treasury practice official documents and records are per se a sufficient basis for action. Shāfī law endorses this practice by drawing a clear-cut distinction between "private rights" (al-ruṣūṭ al-khādīja) and "public rights" (al-ruṣūṭ al-Īmmā}).
but the Ḥanafis declare that Treasury documents can only serve as a basis for action when their authenticity is established by oral testimony. Secularly proof of payment of taxes is established in Treasury practice by the written receipt of the collector. Legal doctrine, however, requires the oral acknowledgement of his signature by the collector; and further, in Ḥanafi law, such an acknowledged written receipt must be substantiated by oral acknowledgement of actual receipt. Finally written authorisation for payment from the Treasury is in practice accepted as a sufficient basis for Treasury accounts, while the jurists ideally require in addition oral acknowledgement of actual receipt by the designated receiver.

(ii) Procedure in disputes. The paramount question of the allotment to the contending parties of the respective roles of plaintiff and defendant is governed by normal Ḡarī'a principles. The plaintiff, upon whom falls the burden of legal proof (failing which effect is given to the defendant's oath of denial), is the party whose claim runs counter to the initial legal presumption attaching to the case. Thus in disputes arising from the inspection of officials' accounts by the dīwān's officers (the presentation of accounts to the dīwān being obligatory upon officials concerned with the collection or distribution of jay') the accountant of the dīwān fills the role of plaintiff if the dispute concerns the income of the Treasury and that of defendant if the dispute concerns expenditure.

(iii) Jurisdiction. Disputes between private citizens and Treasury officials are justiciable by the Ṣāḥib al-dīwān, unless he is expressly denied this function in his terms of appointment. Such judicial competence belongs naturally to an office of which the principal duty is that of assuring the application of the rules and regulations of fiscal law. In the case of disputes between officials of the treasury and the officers of the dīwān, when the Ṣāḥib al-dīwān is, in effect, a party to the dispute, the principle that no one can be judge in his own case applies and jurisdiction belongs to the ordinary courts.

Fundamentally concerned with the strict regulation of man's relationship with his Creator, the Ḡarī'a dealt with the relation of authority to administration, and the State only in general terms, restricting itself to demanding the observance of a few relevant principles. This attitude is particularly evident in the field of criminal law, where, outside the ḥadd offences (in which the notion of man's obligations towards Allāh predominates) the determination of offence and punishment is left to the discretion of the sovereign. So it is with fiscal law. Only those limited aspects of public finance which are deemed to constitute man's obligation towards Allāh (e.g., ṣahīl tax) are regulated in detail; thus the law concerning the ḏayt al-māl is essentially within the province of the administrative regulations (ḥānūn) of the political authority and not of the Ḡarī'a.

II. History. The institution can be traced back to Muḥammad in so far as there already existed in his time the embryonic notion of a Treasury of the Community, supplied by diverse forms of contributions; but its real origin is to be found in the contact between the new needs of the Community which had become the conqueror of an Empire and the pre-existing fiscal institutions of the conquered States. Tradition is certainly correct in attributing to the Caliph ʿUmar several essential preliminary steps, although the details are undoubtedly surrounded with much confusion. For ʿUmar the immediate problem was the organisation of the system of stipends (see ʿṣālī), the fiscal régime itself and the collection of taxes remaining almost exclusively in the hands of the native population. Afterwards the progressive development of a bureaucratic and centralised Muslim State had a particular effect on the elaboration of the scheme of taxation, the methods of financial administration and the organs of this administration. It is obviously impossible here to encompass the whole history of the institution, particularly after the time of the fragmentation of the Muslim world into individual States whose differences became more and more accentuated; moreover no history of this kind has as yet been written. We shall, therefore, confine ourselves to making certain observations of general validity and indicating certain desirable lines of enquiry.

The simple taxes of the early Muslim community could, in their broad concrete lines if not in their theoretical basis, be assimilated to the more complicated taxes of the States to which Islam fell heir and whose fiscal structure the Arabs, like the majority of conquering nations, respected—to such a degree, indeed, that throughout the length of Islamic history the former Byzantine territories (differing among themselves) and the former Sākānad territories (not to mention the West) remained quite distinct areas from the fiscal point of view. To this was added, at the outset, a further distinction, afterwards resolved, between the towns conquered by force of arms, which were directly subject to Muslim taxes and tax-collectors, the towns of ʿaḥd, which paid a fixed tribute and raised it independently in their own fashion, and, between these two extremes, the towns of ʿalīh, where the taxes were Muslim taxes but were raised by the native administration. For two thirds of a century the fiscal records continued to be written in the native languages, until ʿAbd al-Malik, (685-705) ordered the translation of the fundamental documents into Arabic (the example of the Egyptian papriy proves that it was by a slower process that Arabic came to be exclusively used in the work of the subordinate administration).

Both practice and theory fairly soon distinguished the following taxes and sources of revenue:

The basic tax was the land tax, bāḥrādī, originally levied upon all the lands of the non-Muslim natives. When a large part of the indigenous population became Muslims by conversion, it became necessary, in spite of certain misgivings, in order not to ruin the fiscus, to decide that the land was not affected by the change of faith on the part of its possessor and must always be subject to the bāḥrādī. From the point of view of the Islamic theory, the bḥa-
... constituted a permanent rent from the land for the benefit of the Muslim community, the supreme owner. This is the doctrine of pay of tax, which does lapse upon conversion to Islam. The distinction between khurādi and diyya, though sharp in theory, is not always so in terminology and in practice, particularly because the Byzantine Empire, it seems, had practiced a combined land-capitation tax.

The tax, or rather voluntary alms, peculiar to the Muslim was the zakāl or sadāqa, levied upon both landed and moveable property. As regards landed property it was applied on the Arab land to Arab properties (especially in Arabia) and on the other hand to the tābī', conceded from the State domains to Arab notables and, later, to the military leaders of every race. In its relation both to landed and moveable property the zakāl was closely allied to the tithe, ushr, which was known to the Near Eastern pre-Islamic societies, and often was so called.

So these taxes were very far from the right to one fifth of the booty, the produce of mines, treasure trove from the land or from the sea and the mawārīt ḥāshiyya, succession to the inheritance of persons dying without legal heirs.

In addition, the State lands, sawādi', when they were not conceded as tābī', whatever the method of their exploitation, brought in revenues similar to those of private properties. Further the State appropriated the proceeds from judicial fines.

It was only the taxes listed above which were held to be legal by the theory. But in practice many others were discovered or invented. Some were supplementary increases upon the normal taxes for the defrayal of attendant expenses or any other reason (ṣarā', tawābi'), in contrast to the basic tax, asl, and others fell upon the most varied forms of economic activity (ṣarā'īb, rusūm). These last were generally condemned by the jurists, who were often connected with commercial circles, under the name of muḥās, and certain pious rulers attempted to abolish them, though naturally this was without any lasting effect. The police often demanded the payment of a particular hādīya. Finally the State was always punishing high officials who had enriched themselves by confiscations (mustādara) etc.

The peculiarities of the assessment and the collection of each tax will be studied under their respective titles and so nothing more need be said on the subject here.

In general terms the recovery of taxes can be effected either by direct administration (through the agent or dāmin) or by farming out, dāmin. The system of tax-farming, which was as well known to antiquity as the direct levy, gained ground with the growing decadence of the 'Abbāsid Caliphate, but it was perhaps never practised to such an extent as has often been believed by those who have failed to distinguish properly the notions of dāmin, ḥādīya and ḍiyya, which, although there may be occasional confusions of terminology, are utterly different things. Ḥādīya can only be paid by the owner, there exists a group of tax-payers collectively responsible for the tax. By agreement between the group and the agent of the fiscus it may be decided, as was the case in the later Roman Empire, that the tax will be paid by one or several individual persons of standing, and it will be annually to the State a contracted sum, less than the calculated revenue from the tax, and afterwards undertakes its recovery on his own account, which will, of course, reimburse him with profit. If the State is reduced to this method it is assured of a precise and immediate return from the pockets of rich individuals, but it loses a portion of the money paid by the tax-payer and, for the duration of the contract, the control of operations. As for the ḍiyya, he may well be dāmin, but he has at the same time the unique position of a sort of official money-changer cum surety; for he verifies and standarises by exchange the different types of currency, good and bad, paid by the tax-payers in return for a small percentage collected as a supplementary tax from the latter.

Furthermore, outside the territories subject to the normal taxation, levied directly or by farming out, there were other areas in regard to which the State had renounced some part of its fundamental rights. In some areas—ṣāḥir—the State temporarily refrained from sending agents of collection, abandoning the revenue to an army commander so that he might cover therefrom the expenses of his army's maintenance. In other areas—theṣāhiyyā (to be carefully distinguished from the ḍiyya)—the State was content with a contracted tribute, without concerning itself with the theoretical scheme of taxation: equivalent to the primitive 'ahd, this was applied in particular to the vassal rulers of regions which were not completely subdued. The ḍiyya, in its original form of a concession of land from the State domains which was subject to the payment of the tithe, had not any particular fiscal character; but later there were assigned under this name to army officers as the equivalent of their salary the fiscal rights of the State in khurādi districts, initially subject to the payment, by the beneficiaries, of the tithe for the area concerned, then later with no attached condition other than that of professional military service (see C. Cahen, L'évolution de l'ṭidt', in Annales ESC, 1953). These different methods of alienation of the revenues of the fisc naturally diminished the returns, but they equally alleviated the expenditures in a manner which often involved hardly any break with the previous position, since in any case the proceeds of the taxes from a province were never sent to the fiscus until the provincial expenditure had first been satisfied on the spot. The danger to the State was only serious in proportion to the extent, which varied in the different regions and at different periods, to which these alienations resulted in a relaxing of the fiscal control itself and consequently also of the appreciation of the resources of the territory concerned.

This appreciation was obtained with fairly reasonable accuracy not only through the lump evaluations of the budget but also from the daily sessions, following the ancient custom, devoted to the detailed assessment of lands and their fiscal value, as well as of persons subject to the ḍiyya...
and, in all probability, the *sakād*, not to speak of the other taxes. The best example preserved concerns the Fayyūm in the 7th/13th century (*Arabica*, 1956), but we know that what we call *sakād* or *sawād*, of the province of Kumān in Iran, etc., and in a general way of the methods of the administration, allows no one to doubt that there are almost everywhere parallels in ‘Abbāsid times. The value of each fiscal unity was the object of an assessment, *qibra*, which continued to serve as an authority so long as there had been no revision, although naturally, the administration itself had to admit annual variations. Diverse works, such as the *Mafīṭih al-‘usām* and the Egyptian papyri, allow us to follow from another angle the precision of the daily accounts of the refunds of taxes and of the reliefs granted to taxpayers. Arrears (*bākāyā*) were meticulously noted and claimed in following years, although it was in practice often necessary, when arrears had accumulated, to settle them by compromise. Recovery of taxes necessitated a distinction between the two calendar years, for only the personal taxes or the payments *ex contractu* could be based on the legal lunar year, while the taxes on land and its produce were of necessity based on the solar year, Persian or Egyptian.

These methods, which were the pride of the *hujūd* and the *hussāb*, allowed the ‘Abbāsid Caliphate, until the beginning of the 4th/10th century, and certain regional rulers after that date, to establish veritable budgets, at any rate of receipts (the arbitrary activity of the rulers in the matter of expenditure not allowing equally comprehensive appreciations in that sphere). In particular four ‘Abbāsid budgets have been preserved, undoubtedly based upon good archive sources, the relative agreement of which guarantees the accuracy, if not of all the details, at least of the main and broad essentials. They do not provide a complete statement of the total receipts of the Caliphate, for the *qijāya*, the *sakād* on moveable property and, *a fortiori*, the *mukhās* only figure there exceptionally (their more variable character and the fact that they did not issue from the same services being obvious). Such as they are they show a total of income exceeding 400 million dirhams for the second half of the 2nd/8th century, falling short of 300 million by the beginning of the following century, and at the beginning of the 4th/10th century down to 14½ million dinars, which is approximately equivalent to 210 million dirhams. This shrinking of the receipts was due to the territorial losses of the Caliphate and not, except at moments of crisis, to diminishing fiscal values within each province. The increasing financial difficulties of the Caliphate were, therefore, not occasioned by any economic catastrophe, for which supposition there is absolutely no foundation, but by the relatively increasing burden of necessary expenditure, particularly military, which it was impossible to reduce in proportion to the decline in the provincial tax returns. Without attempting here to cover all the details of the military organisation of the Caliphate, we may try to show something of the financial burden which it constituted: a foot-soldier’s usual pay being of the order of 1000 dirhams per annum, and that of a horseman double this amount, it can be estimated that the cost of the stipends alone for an army fifty thousand strong would be in the region of seventy five million dirhams. To this, of course, it is necessary to add the exceptional salaries of the commanders, the gratuities and the cost of equipping and maintaining the armies and the fortifications etc., and one writer maintains that in the middle of the 3rd/9th century the army was costing at one time some 200 million dirhams, which means to say that at that moment there would be a surplus only of approximately one half of that sum (not counting the taxes which did not figure in the budget) for all “civilian” expenditure. This latter expenditure is more difficult to assess, although we know the salaries of the principal officers of Government and Court under the ‘Abbāsids and the Fāṭimid, not to speak of later periods (see especially Hilal al-Ṣahh, *Wuzārā*, and al-Maqrīzī, *Khilāl*, ii, 401).

It is difficult to give a precise description of the various organs of the central fiscal administration which often, and in a varying manner, overlap and are confused with each other under ill-defined titles. The fiscal administration was the primary duty of the *diwān* in particular and in general, consequently, of the vizirate when this latter developed. But it was impossible for a single organ to deal at the same time with both the operations and the fundamental rules of *qabla* (assessment and collection and the daily accounts of income and expenditure. In spite of the difficulty of the texts it is apparently to this division of duties that the institution of the *diwān al-imtām* corresponds, for this office, which was later known in the East as the *istiqf* (the director being the *mustawfi*) appears to be the service of accounting. From the time of al-Mahdī it controlled the accountancy services attached to each *diwān* as well as those of the provincial administrations. Expenditure was the province of a special *diwān*, the *diwān al-maḥbūs*, while expenditures relating to the army were the province of the *diwān al-dākhil*. With the inauguration of the system of the fiscal *shabī‘* this latter *diwān* in fact came to possess duplicates of the survey registers for receipts. The *Bayt al-Māl* properly so called was the service to which the income was delivered and from which the expenditure was drawn, the Treasury. An army of scribes, *hutāb*, and accountants, *hussāb*, worked in these offices, some under the control of others, applying the accountancy techniques which the didactic fiscal treatises of the Būyid period have revealed to us. For the representation of numbers they employed what is known as the *diwān* script, which consisted of letters and particular signs devised from abbreviations of the names of numbers, and which was to remain in use almost up to the present day in certain countries, to the exclusion of the “Arabic” numerals. Still further subdivisions existed in the services, in particular, as regards the receipt of the land taxes, between the service for the *khāraḍ* and that for the *diyād*, that is to say landed properties subject solely to the tithe. On the other hand a regional division was gradually established, by virtue of which we can distinguish a *Diwān* of Sāwād (province of Bābdhād), one of the east and one of the west (Arab territories). Special services ministered confiscated properties; these were sometimes returned, sometimes distributed. Again, dues paid in kind, presents and gifts received, the valuable products of the *fīrāz* etc., were stored in the *khāṣād* or *mukhās* and, and the general term of *mukhās* appears to have almost replaced, in the administration of the later Caliphate, the term of *Bayt al-Māl*, the change reflecting, undoubtedly, the proportionate increase of presentations in kind and the diminution of fiscal receipts in hard cash.

The Muslim State, however, always recognised the distinction between the private Treasury of the
Caliph or the Prince, Bayt mâl al-khdssâ, and the public Treasury, Bayt mâl al-muslimin or simply Bayt al-mâl. But the distinction was by no means a rigid one, for the private Treasury was supplied not only with the revenues from the sovereign's personal estate but also with different public revenues such as fines, confiscations and even capitulation fees and land taxes from certain provinces of Irâk and southern Iran, out of consideration for both the needs of the Court and also all the pious works which the Caliph and his successors had to undertake. In practice, whatever the pecuniary position of the Caliphs, the privy purse had often to play the rôle of a simple reserve for the public Treasury, furnishing it with advances which might or might not be reimbursed (W. Fischel, Le Bayt Mâl al-khdssâ, in Actes du 19e Congrès des Orientalistes, 1938, 538-41).

Each of the provinces had, on a small scale, an organisation parallel to that of the central government. They did not despatch to the latter the sum total of their fiscal revenue but only the residue after local expenses had been satisfied. Furthermore the provinces did not send on this residue as and when local expenses had been satisfied. Furthermore the organisation parallel to that of the central government was in proportion to the fiscal autonomy of the provinces, even if it did not alleviate the tax burden itself, did improve the situation in general, since the interest of the fiscal rulers lay in being self-supporting and in at least expending on the spot revenues which had formerly gone to enrich the favourites of the Caliph. A few echoes of the conflicts between the democratic and aristocratic notions of taxation have come down to us (for example in Ibn al-Kalanisî, 343 and 352-3).

The growing, albeit variable, spread of the régime of the fiscal sâmil* from the beginning of the 4th/10th century considerably diminished the importance of the fiscal administrations, as it also did that of the direct resources of the State. It is out of the question here to trace the financial history of the different Muslim principalities which were the heirs of the Caliphate. It must suffice to say that until modern times the countries which have not been affected by the Mongol invasion have retained for the taxpayers almost the same régime of taxation as that of the State was in the 12th/18th century. The rights of the State have only ever been partially alienated and that in consequence certain methods of assessment and budgetary estimates have always there been possible. The countries incorporated, during the 7th/13th century, into the Mongol Empire, not to speak of the subsequent series of changes of rule, experimented with forms of fiscal administration which combined with the old Muslim traditions new elements taken from the conquerers. Such elements were also introduced into Asia minor, where, in addition, there still persisted Byzantine traditions which had become interwoven with the local Saldjûkîd Muslim institutions; and these three elements apparently influenced, though in a way which has not yet been discovered, the original formation of the future Ottoman institutions. The figures quoted in such and such a source have often been adduced to demonstrate the decadence of the fiscal revenues and consequently of the economy; but these figures can only be interpreted on the basis of a consideration, in the first place of the proportion of taxes accruing directly to the State and that alienated to individuals, and in the second place of the value of currency and market prices; and it would be wise for the moment to refrain from any positive assertion.

_Bibliography:_ We can naturally do no more here than note certain sources of particular importance. For the origins references may be found in Caetani, _Annali_, iv, 368-417, to which may be added Abû 'Ubâyda b. Sallâm, K. al-Amwâl (see 'ârijâ); the majority are drawn from the works on _iḥrâd_ composed in the 1st 'Abbasid century by Abû Yûsûf and Yûsûf b. Adîm, and that of an annotated English translation by A. Ben Shemesh, Leiden 1958 has just appeared), and, later, from the K. al-Fuṣûsh of Balâghhuri. The K. al-Khâridji (not wholly preserved) of Kudâma (ed. A. Makki, a typewritten thesis, Sorbonne, Paris) and the scattered information in the Ma'dâsh al-Ulim of Khwârizmi date from the 6th/12th century, and the _Abhâm al-Sulâmî_ of Mâwardî from the 5th/11th century. The
budgets studied by A. V. Kremer in his *Kulturgeschichte des Orients*, i, ch. VII and Das Einnahmenbudget ... vom Jahre 306 (Denkschr. d. k. Akad. d. W. Wien, Ph. Hist. Kl. 38, 1888 (the oldest one, now also accessible in Dijhaviyâr, K. al-Wusârî, ed. Mizik, 179-182, or Cairo 1938, 281-88)) are drawn from various chronicles. To the Bûydî period belong the didactic treatises on fiscal mathematics of al-Bûzâqânî (a study is being prepared by Saleh el-Alli, Baghdad) and of the anonymous author of the K. al-Ḥâlî (analysed and commented upon by myself in ABER, x, 1952). Much information can naturally be obtained from the Egyptian papyri, edited by A. Grohmann, see his commentaries in the articles in the *Archiv Oriental*., v-vi, 1933-1934, and by C. Leyerer in ZDMG, 1953. Among the historical chronicles and works the most valuable are evidently the *Taḏbardîb ‘Umam* of Ibn Miskawaih with their supplement by Rûdhrawarl, the K. al-Wusârî of Hîlal al-Ṣâhîr and the *Tawâkht Kumn* of Hasân b. M. Kûmî, much used in A. K. S. Lambton, *Landlord and Peasant in Persia*, Oxford 1953, especially chap. II. Certain official correspondence, such as that of the Bûydî vizir Ibn ‘Abbâd, ed. ‘Abbâd al-Wâhâb, ‘Azzâm and Shûkhî Da‘îl, 1947, may be consulted with advantage. For subsequent periods it will suffice to note certain recent publications: for the Ayyubids, in addition to the classical *Kawdnîn al-Dawdîn* of Ibn Mammati (ed. Atiya, 1943), the short works of ‘Ughmân b. Ibr. al-Nâbulusi (*Description of Fayyum*, see my analysis in *Arabica* 1956, and *Lam* al-Kawdnîn, edition prepared by myself); for the Mongols, the *Kesrâyî fâlakhiyya* of ‘Abbâd Allâh b. Kiyâm al-Mâzâdarânî ed. W. Hinz and studied by him in *Der Islam*, xxix, 1949; for the Yemen, R. B. Serjeant and myself will publish a valuable work of the 9th/10th century, the *Mula‘khhas al-fisân* (cf. *Arabica*, iv, 1957, 23 f.). For Egypt in general and the Mamlûks in particular the importance of Makrîzî, Khiyâtî, and of Kalkašhândî, ‘Ushb need not be emphasised.

There does not exist any financial history of the Muslim world; there are, however, certain useful partial studies. See particularly D. C. Dennett, *Conversion and the Poll-Tax in early Islam*, 1954; for the whole of the “classical” period, Fr. Lokkegaard, *Islamic taxation in the classic period*, 1953 (a great documentary and technical achievement, but not uniformly reliable) which refers to the works, important in their time but now superseded, of C. Becker, etc., and Chapter 8 (cf. 5) of *Mez in Renaissance*. Useful observations will be found in the Sorbonne thesis of D. Sourdol on *Le visirat abbâsîde*, when this is published. Among other more specialised studies, apart from those which are cited in the text of the article, see W. Fischel, *Origin of Banking in Medieval Islam*, in *JRAI*, 1933, and H. Gottschalk, *Die Mâlardîvîyya*. An exposition of the classical doctrine may be found, for example, in S. A. Siddiqi, *Public Finance in Islam*, Karachi 1948. (CL. CAREN)

In the Ottomân state the distinction was carefully maintained between the private treasury of the Sultan (*Khazine-i Endûrîn* or ‘îl Khazine) and the public treasury or treasuries of the state (*Khazine-i Emirîyye, Khazine-i Develî, Khazine-i Âmire*, etc. On the Ottoman treasury, and finances see further *Dâftarâs, Khazine, Mâliyya*). The term most commonly used to the state treasury was *Mîrî* (from *emirî*), which was also used in the more general sense of government property (cf. *beyâlîk*). In Ottoman administrative documents it is normally called *bayt al-mâl*, though the expression does occur, usually in the forms *bayt al-mâl-i Mûsîmîn or bayt al-mâl-i ʾîmâma* (as for example in some legal rulings of Abu ʿİ Suʿûd quoted by Ömer Lutfi Barkan in *Tanzimat*, Istanbul 1940, 333, 335, 343; and in a few *kânûnînâmes* published in Barkan, *Kanunlar*, 297, 300, 326. In all these the context is the rights of the *bayt al-mâl* over certain categories of land, called *ard-i mîrî or ard-i memleket*). In common Ottoman usage the term *bayt al-mâl* was normally restricted to a certain group of revenues belonging by law to the public treasury. These consisted of various categories of forfeited, escheated, and unclaimed property, and are enumerated and discussed in a number of documents. The most important were property belonging to missing and absent persons (*mîlî-i gâdîb* and *mîlî-i maḥbûb*); escheated property (mukaddasât, mabârad); runaway slaves and stray cattle (*‘abd-i ãbîb, kakhun, yasû*). The collection and care of these properties was the function of an official called the *Emin bayt al-mâl* or *bayt al-mâlîgî*. Most legal sources agree that unclaimed properties are to be held for a period of time, variously determined, as a trust, to give the heirs the opportunity to assert and establish their claim. Only after their failure to do so does the money or estate become the property of the treasury. There are frequent complaints that this rule was disregarded, and that property was seized too quickly and without proper verification (e.g., Lutfi Paşa, *Aşfâmîn*, ed. and tr. R. Tschudi, Berlin 1970, text 12, tr. 12; cf. Sarî Meşmûd Paşa, *Naşîbî al-Wusârâ* ed. and tr. W. L. Wright, Princeton 1935, 71).

The Ottoman *kânûnînâmes* contain elaborate instructions and safeguards concerning the claiming of these properties and the assigning of the proceeds. Properties claimed for the *bayt al-mâl* could be and frequently were assigned to *‘amîls*, to *sandjak-beys*, and even to *şâbîhs*. As early as 883/1479, a *ferman* of Mehmed II lays down a distinction between reversions worth less than 10,000 aspers, and those worth 10,000 and over. The former were to be paid to the *‘amîl*, or tax-farmer of the area; the latter were reserved to the Imperial treasury (*beyâlîk*) (Halil Inalcık, *Faith Sultan Mehmed’in Fermanlari*, Bell. no. 44, 1947, 699-700). A similar distinction is made in a late 15th century *kânûnînâme* (Anhegger-Inalcık 70-1), and is common in *kânûnînâmes* and registers from the 16th century onwards.

The normal rule was that these properties, or the fees payable if they were successfully reclaimed by their owners, belonged to the treasury. In fact the share of the treasury was limited to items worth 10,000 aspers or more, and to property left by the servants of the Sultan, a category including the *şâbîhs* and other persons in the Sultan’s employ. In the earlier period it also included the Janissaries. The remainder was part of the *khâs* of the *sandjak-beys*. There were some exceptions to this division. In the so-called ‘free’ *imalars* (*serbest imârs*), the *bayt al-mâl* revenues were assigned to the *imalar*-holder, and not, as in ordinary *imalars*, reserved to the Sultan’s or the governor’s *khâs*; in some *sâyi* lands too, notably those in favour of the *barameyn*, they were included in the *sâyi* revenues. From the 16th century the Janissaries had a special officer of their own, the *Ojâk bayt al-mâlîgî*, a kind of regimental
treasurer one of whose duties was to collect and assess the *mukhallafat* of heirless Janissaries, "şâqimi ohlâns", etc. These or their equivalent were placed in the regental chest (Isma'il Hakkû Uzunçarşılı, Ṭurşûs, Osmani Devletî teşkilâtîndan Kapulu Ocaklari I, Ankara, 1943, 311-320). Another interesting example of corporate privilege occurs in Jerusalem, where the *Zâviya* of Maqârib *muğâwirs* were collectively given the right of retaining the *mukhallafat* of any one of their number who died without heirs. This right was granted by Salâdîn, and confirmed by the Mâmrîdî and Ottoman Sultans (Basvekalet Arşivi, tapu register no. 427 of 352/1556; cf. A. S. Tritton, Materials on Muslim Education in the Middle Ages, London, 1957, 123). A similar privilege appears to have been given to the monks on Mount Athos (P. Lemerle and P. Wittêk, Recherches sur l'histoire et le statut des monastères orientaux sous la domination turque, Archives du droit oriental, iii, 1948, 443, 544, 453, 465).

### Bibliography:

The *Muslim* West. As long as the Maqârib and al-Andalus were under the direct administration of the Umayyâd or the *Abbâsid* Caliphate they posed no particular problems of financial organisation; the local *bayt al-mâl* was only a branch of the *bayt al-mâl* of Damascus or of Bagdad.

It was only when some part of the Muslim west slipped from the control of the eastern Caliphate that separate administrations were organised there.

Except for the chapters of Ibn Khaldûn devoted to administration (Masâddîmîn, Cairo ed., 269), one cannot point to any detailed concerning the administration of the public finances or even any systematic treatment of the situation at any given period or place. There is no alternative but to try to give some idea of what happened from the slight and scattered indications in the chronicles and diverse documents available.

1. Al-Andalus. The work of E. Lévi-Provençal has shown that in Muslim Spain the term *bayt al-mâl* was nearly always taken in a limited sense. In effect this expression, which is often found in the form *bayt mîl al-musulîmîn*, designates the treasury composed by the revenues of pious foundations (*awâkîf*) and clearly distinct from the public treasury properly speaking, which is commonly called *kânsûnîat al-mâl* and much more rarely *bayt al-mâl*. This treasure from pious foundations was quite naturally placed under the authority of the *kâdî* who looked after its administration, and was kept in a religious building, at Cordova in the *mâkhûra* of the Great Mosque (Ibn Əlînârî, Bayânî, iii, 98). The sums which constituted it originated for the most part from the revenues of pious foundations often assigned to strictly determined expenditure, but also from irregular deposits that could not be touched, in particular the goods of the "absentees" (mâhkûh), that is Muslims who, for one reason or another, had abandoned their possessions without designating a legal mandate for their administration.

The *kâdî* was assisted in the provinces by the inspectors of the pious foundations (nâṣîr al-*awâkîf*) and was only qualified to authorise expenditure. These funds could only be employed for the ends indicated by the donors, or if the objects were only expressed in vague terms, for works of public utility and religion like help for paupers, the upkeep of mosques and the payment of their staff, the building of institutions of learning and the payment of teachers, etc. The *kâdî* could authorise advances from the public Treasury for pious works like the organisation of a military campaign against the infidels or the restoration of a defence work on the frontier of the dâr al-îslâm.

This system still functioned at the beginning of the 6th/12th century during the Almoravid occupation, as is shown in Ibn ʿAbdûn’s discourse on the *bîšîa*, edited and translated by E. Lévi-Provençal (see bibliography).

II. Maqârib. Nothing leads us to believe that the term *bayt al-mâl* was used in the Maqârib in such a restricted sense. It seems to have been used in its wider meaning of the public Treasury and it designates at the same time the administration of public finances.

So far the financial organisation of the different states of the Muslim West has not been the object of a systematic study. It must be added that the information supplied by the Arabic chronicles is slight and very scrappy. We must be content with very general observations on the matter.

The Ṭâhlabîs of al-Ḵawwârîn do not appear to have been innovators in this respect and seem to have been content with the system they found when they came to power in 184/800. If the ʿAlînîms did not change much in the administration and nomenclature of the taxes, they obtained, according to the indications of Ibn Ḥawkâl (ed. De Goeje, 69) a remarkable return from the taxes, the annual total of which reached 7 to 8 million dinars. The Zîrîds could only maintain the system so well organised by their predecessors.

We know practically nothing about the financial organisation of the Almoravids except that their first ruler, Yûsûf b. Ṭâhâfûn felt obliged to content himself with "legal" taxes—an attitude which his successors did not keep up, and that they maintained in Spain the organisation that they found in force there.

The only precise indication that we have is the subject of the Almohads is the establishment by ʿAbd al-Mumanent in 555/1160 of a sort of cadaster intended to cover the whole Maqârib and to help in the assessment of a land tax (ṣûrûdîyâ) (Râvûd al-Kirûfîs, ed. Tornberg, 126; 174).

R. Brunswig’s study on the ʿHâṣîds contains all the details possible—and they are comparatively few—on the financial organisation of the eastern Maqârib from the 7th/13th to 9th/15th centuries. The official who directed it bore the name of Ŝâkîh al-asâbîkâl, a term also used by Ibn Khaldûn (*loc. cit.*), then of munâfîfîh. It was characterised by the fact that, in a number of instances, it renounced *Kûrânîc* "legality" but it was successful, for the Ḥâṣîd treasury was nearly always well filled.

Nothing precise is known about the Banû ʿAbd al-Wâd. It is possible that the thesis being prepared by M. Mounîn may clarify the subject.

The rare and scattered indications on the financial organisation of the Maqûïds can be found in the
**Masālik of Ibn Fadl Allāh-al ‘Umari (tr. M. Guade-froy-Demombynes, BGA, ii, Paris 1927) and in the Musnad of Ibn Marsūk (ed. and tr. E. Levi-Provençal, in Hesp., 1925). They all concern the reign of Abu ‘l-‘Uṣaybā’ī (the middle of the 14th century).**

A text of al-‘Irāfīr (Nuzhat al-‘Irāfīr, ed., Houdas, 38-40; tr. 70-75) provides interesting information on fiscal matters at the beginning of the Sa‘dīd period and on the establishment of a new land tax called nā‘īdā. Finally, the work of E. Michaux-Bellaire gives quite a clear picture of the financial system under the ‘Alawīd dynasty at the end of the 19th and beginning of the 20th centuries.

It may be hoped that the Turkish archives preserved in Tunis and Algiers contain the materials for a study of Turkish fiscal policy in the Maghrib, at least from the 18th century.

(R. Le Tourneau)

**AL-BAYT AL-MUQADDAS** [see al-Kuds]

**BAYT RĀS,** a village in Transjordania, was described by the Arab geographers, and situated about 3.5 km. N. of Irbid in the district of ‘Ajlūn [q.v.], on an eminence (389 m.) surrounded by ruins which mark the desert site of the ancient Capitolias. This town of the Decapolis, the name of which corresponds to the Arabic name which outlived it and doubtless relates to its dominant position in a less hilly region, was noted by the early itineraries along with Aṣhūr (Der‘a), Abila (Tall Abil) and Gadara (Umm ar-Rayb), which were neighbouring places. Formerly a Nabatean possession, it had maintained its importance as a Byzantine bishopric of Palestine Secunda. Occupied by Shu-rabīb b. Hasana at the beginning of the period of Arab conquest and incorporated in the jund of Urdunn, it enjoyed during the Umayyad period a position which is attested by various notices in the poets and chroniclers. These sing the praises of its wine, “already praised by the pre-Islamic poets Nābiğha Dhubyānī and Ḥassān b. ‘Abîl Ġhūfī (H. Lammens) and still known by Yākūt in the 6th/13th century, and mention it as the seat of the caliph Yazīd II, who lived there with his favourite Ḥabba (the tradition which makes it the birthplace of the caliph Yazīd I seems however more doubtful, and may be based on a confusion with the village of Bayt Rānūs in the Ghuta of Damascus, as has already been pointed out by H. Lammens, Études sur le règne du califique omayyade Mo‘awia le, Beirut 1908, 379 and n.). The fame of Bayt Rās, at a period when the Marwānīd rulers preferred to reside in the region of al-Balqā‘ [q.v.], which is rich in archaeological remains that can be attributed to them, was followed by a rapid decline, and the site was almost completely abandoned. It is a cause for regret, however, that the ruins which still exist, and which have been briefly described by travellers, have never formed the subject of a serious study which might enable one to distinguish the traces of an Umayyad establishment in the midst of the earlier buildings.

**BAYT AL-MĀL — BAYTAR**

**BAYṬAR** is the most frequently used form of the word which denotes the veterinary surgeon. It is an arabised form of ἰπποτρόχος, and, as a matter of fact, the more exact form ḵavār is to be found in ancient poetry, as well as baytar. The preservation of the original Greek form in Oriental languages is also proved by the 12th century Mīnārāt Numūrī, 9, where ḥayṭār is expressly written. However, the Greek hippiatric terminology does not seem to have been known in Islam, if the quotation of Heraclides in al-Bīrūnī, al-Andalus, 1350 does not mean Heracleides of Tarentum (ca. 75 B.C.), who wrote, amongst others, a hippiatric book, cf. M. J. Haschmi, Die Quellen des Steinbuches des Bīrūīnī, Thesis, Bonn 1935, 44. A pseudo-Hippocratic work on the subject bearing the title De Curationibus infirmitatum equorum, was translated by a Jew named Moses of Palermo for Charles I of Anjou (1266-1285), and printed in Bologna 1865, in P. Delprato, Trattati di <i>mascalia</i> attribuiti ad Ipocrate tradotti dall'arabo in latino.

The oldest Arabic work on <i>baytara</i> is ascribed to Ḥunayn b. Ṣa‘īdī by Ibn Abī ‘Uṣaybā‘ī, i, 200, 26; it is also the only work on the subject quoted by Taḥkūrīzāde, Miṣṭah al-sa‘ādā, i, 270, who calls it “sufficient” (ḥaflat). A work called Ḥabīr b. Ṣa‘īdī (Husayn) is the first author on hippiatrics whose works are preserved, namely, Abū Yūsuf Ya‘kūb b. Ḥabīr Ḥiṣām, stablemaster to al-’Uṯmān and al-Mu’taḍīd (second half of 3rd/9th century), cf. Brockelmann, S I, 432 ff., where further bibliography is quoted. A great many manuscripts of books by several authors were listed by H. Ritter in an annex to his review on ‘All b. ’Abd al-Rahmān b. Ḥudhayl al-Andalusī, La parure des cavaliers, ed. L. Mercier, 1922 (Der Islam, xviii, 1929, 119-126). The words baytar and baytara are still in use in modern Spanish (albestar and albestaria). An French article on the veterinary medicine of the Bedouins was translated into Arabic by Père Anastase, al-Machriq, i, 1898, 684, 942.

(M. Plessner)
**BAYYĀNA, Span. Baena**, a small town in the province of Córdoba, 59 kilometres from the capital. During the Muslim period it belonged to the district of Cabra; with al-Zahrāʾ, Ecija, Lucena and Cordova, it formed the ṭālim of al-Kambaniya (la Campana). Situated on a hill in the Campana of Cordova and watered by the Marbella, a tributary of the Guadajoz, it was surrounded by gardens, vineyards and olive groves, as at present, and enjoyed great prosperity during the Umayyad period. The town possessed a solid fortress, situated on the slope facing the river, a cathedral mosque built by the order of ʿAbd al-Raḥmān II, markets and baths. Ibn Ḥafsūn [q.v.] succeeded in conquering Bayyana during the period of the ʿamīr ʿAbd Allāh but, with the fall of the caliphate and the ensuing disorder of the fīna, it lost much of its rural tranquillity. Its present location dates back to the Muslim period, as no Roman traces have been found there nor in various parts of its environs, as far as the neighbouring ridge of Antigua. Alfonso the Warlike on his famous expedition into Andalusia, passed by Baena without taking it, shortly before the battle of Arnisol (Ṣafar 520/March 1126). When the town fell into the hands of Ferdinand III in 1240, it had a double enclosure, an internal wall which enclosed the alcazaba and the mudaina, and an external wall which encompassed the outskirts occupied by the civilian population. The mudejares who remained at Baena were transferred to Castile in 1571, but a royal charter authorised their establishment at Cordova until their final expulsion. The most important celebrity of the town was Kāsim b. Aḥṣāq b. Muḥammad b. Yūṣuf b. Nāṣr b. ʿAbd Allāh, a traditionalist and philologist who was born at Baena in 247/862 and died at Cordova in 340/951.

**BAYYĀSA, Span. Baeza**, a town in the province of Jaen, 48 kilometres from the capital. Its present population is about 17,000 and it is situated on a hill whose slopes descend to the valleys of the Guadajoz and the Guadajal. Of Iberian foundation, it was called Bistra, according to Ptolemy. Pliny calls its inhabitants Vindicenses, and the Goths made it the seat of the diocese biatensiōnis. Upon its fall to the Muslims it took the name Bayyāsa. Its corn and barley were praised, according to al-Idrisī, who did not however mention its olive groves which today cover half its area.

During the Umayyad caliphate Ibn Ḥafsūn [q.v.] conquered it, but it was retaken by ʿAbd al-Raḥmān III in 217/910. In 412/1021 the town belonged, with Jaen and Calatrava, to the sief of Zaid b. ʿAmīr. It was occupied by the Almoravids, whose last champion in al-Andalus, Ibn Ghanīya, surrendered it in 541/1146 to the emperor Alfonso VII; the latter kept it until he evacuated it in 552/1157 at the same time as Ubeda, shortly before his death and after the loss of Almería. For nearly a century it belonged to the Almohads, and in 609/1212 Al-Nāṣir on his way to Las Navas de Tolosa, moved his camp from Jaen to Baeza. After the rout, the inhabitants of Baeza fled to Ubeda, and on 18 Ṣafar 609/20 July 1212, the victors entered the deserted city and burned it. When the Christians had retired, it was rebuilt and repopulated. In the following year, Alfonso VIII beset it with difficulty during the winter of 1213-14, and was forced to retire without success.

A nephew of ʿAbd al-Muʿmin, Abū ʿAbd Allāh, who held the governorships of Bougie, the Balearics and Valencia, must have lived for a long time at Baeza, for his ten sons had the surname al-Bayyāṣ, and the eldest, ʿAbd Allāh revolted at Baeza against the caliphs al-ʿĀlid and al-Maʿmūn. He allied himself with Ferdinand III and received a Castilian garrison in the alcazaba of Baeza. When he was killed by the Cordovans in 623/1226, the inhabitants of Baeza again abandoned their city, and it was finally occupied by Ferdinand III on 19 Ḍuʿl-Hijja 2440 November 1247. During the 14th and 15th centuries, Baeza, as a stronghold of great strategic importance, owing to its situation on the frontier between Castile and the kingdom of Granada, played a major rôle in the struggles of the Reconquest between the Nasrids and the Marinids.

**BAYYINA** (plural bayyinā), etymologically the feminine adjective “clear, evident”, was already in use as a substantive with the meaning of “manifest proof” in numerous passages of the Kurʾān—in xxviii, 1 for example, whence it is that the Sūra itself is entitled al-Bayyina. In legal terminology the word denotes the proof per excellensiam—that established by oral testimony—, although from the classical era the term came to be applied not only to the fact of giving testimony at law but also to the witnesses themselves. There are other words to express other aspects or degrees of the notion of proof, notably ḫadīth (plural ḫadījāt) “argument, proof (in general or at law)”, “a document constituting proof”, dāll “conclusive indication” and ṣurban “demonstration”.

In the legal field the Kurʾān is concerned with proof in diverse matters, both civil and penal. It is at once noteworthy that it is fundamentally concerned with oral testimony (gāha [q.v.]) that the Kurʾān prescribes recourse. It recommends that certain legal acts should be established by witnesses—divorce by repudiation (lxv, 2), testamentary dispositions (v, 106-108), accounts of guardianship (iv, 7) and the contracting of debts (ii, 282). And while, in this last case, the Kurʾān strongly supports written evidence, this is closely tied up with the eye-witnesses who ought to corroborate, as soon as it is completed, the recognition of the debt dictated to the scribe by the debtor. Such are the modes of proof which the Kurʾān, albeit in a summary fashion, regulates. It notes, in addition, the need for a double number of witnesses (four in place of the ordinary number of two) to establish legal proof of fornication (iv, 19, xxiv, 4, 13); and, to provide for the case where the husband cannot produce this difficult standard of proof of his wife’s adultery, institutes the exceptional procedure of the mutual “oath of imprecation” (lādān) between the spouses (xxiv, 6-9). This procedure, although it does not, properly speaking, establish proof, has, nevertheless, important legal effects. On the other hand the sacred book has nothing to say about the primitive institutions of physical ordeal and oaths of compurgation.

Classical Islamic law consecrated the superiority of proof by testimony, requiring, for its validity,
the fulfilment of some fairly stringent theoretical conditions (see 'ADL and SHAHADA). And it was only in so far as written evidence could be construed as a *sahih* (i.e., the weight of Roman law) that it became generally and more widely accepted, though not without keen discussion, reservations and precautions, even in the case of notarial acts (see E. Tyan, *Le notariat et le régime de la preuve par écrit dans la pratique du droit musulman*, Annales École française de droit de Beyrouth, 1945, no. 2).

In the Kur'anic verses relating to testamentary dispositions (v. 169-170) the witnesses, in case of suspicion, or new substitute witnesses, were invited to take an oath by Allah; but traditional theory regards as abrogated the precept contained in this passage, which is the only one in the Kur'ān where third-party witnesses are required to support their own evidence by an oath. Occasional and exceptional instances can be adduced, under Islam, of kādīs subjecting suspect witnesses to the oath. The celebrated maxim declares: "The burden of proof (by testimony) lies upon the one who makes the allegation and the oath belongs to him who denies (al-bayyina 'alā l-mudda'ī wa-l-yamin 'alā l-mandār)" with the variant "to him against whom the allegation is made (alā l-muddāsī 'alayh)." It ought to be noted that in the process of the action "the one who makes the allegation is not necessarily the original plaintiff (and hence the burden of proof may fluctuate), and further that, in the view of the scholars, evidence can only normally be given to positive facts.

In principle the *bayyina* itself has a self-sufficient authority: where the legal conditions of validity are satisfied it is, as a general rule, binding upon the judge. Several early attempts to support testimony with an oath taken by the plaintiff wholly failed, apart from cases where the defendant defaults or suffers from some incapacity, to influence the classical law (Schacht, *Origins*, 187-188; see Ibn Kūnuma, *Mudāfā*, i, 77). Notwithstanding the assistance of the Fātimids, kādīs Na'mūn, Ibtidsar, Damascus 1557, 163). The Hanafi school held strictly to the letter of the maxim mentioned above, and indeed certainly contributed to the spread of its influence, if not to its very formulation; for, contrary to the doctrine of the other madhābi, Hanafi law does not allow the plaintiff to take the oath in order to complete an imperfect *bayyina* (a single witness) in disputes concerning property, nor does it allow the oath declined by the defendant to be returned to the plaintiff. In the mutual taking of the oath (tahdul) which the Hanafis, along with the other schools, upheld in certain cases where *bayyina* is lacking, each of the two parties stands in relation to other in the position of defendant. For other developments of the judicial oath see the article *yamin*. We will only observe here that the pre-Islamic oath of compurgation survives, in Islamic law, as a method of proof in a limited field of penal procedure (see *kāsamah*).

It is possible, especially in regard to property claims, that contradictory *bayyināt* may confront each other. The *fiqh* texts concern themselves with this *sa'dād al-bayyināt* and endeavour to destroy the conflict by officially declaring one of the proofs superior on the basis of criteria which differ considerably among the different schools and may result in diametrically opposite solutions. Should the proofs concerned nevertheless still prove equal, the solutions, even within the schools themselves, vary between their reciprocal postulates. Indeed the contrary is explicitly stated by the Zāhirī Ibn Ḥamza, *Muhallā*, i, 426. The doctrine requires less in the way of personal capacity for an acknowledgement than for testimony, by reason of the basic presumption of truthfulness on the part of the person making the acknowledgement. But the authors usually—and quite sensibly—distinguish in this regard between the acknowledgement whose only effect is to bind the one who makes it ('alā nafṣi) and the acknowledgement which affects the rights of third parties (*fi ḥabb ḍhuyūrīh), and their decisive force and their legal consequences differ considerably.

In addition it would be relevant, on the subject of *bayyina*, to enquire into the position, in relation to it, of the expert evidence which may be required by the judge. Further, if one were to attempt a general theory of proof in Islamic law, it would be fitting to take account of the discussions relating to the judge's personal knowledge of the facts of a case, to underline the considerable importance and the abundance of legal presumptions, and to note the role and the importance of certain auxiliary indications or initial steps in proof recognised by the law. In this field of proof at law two Islamic tendencies may be observed: the desire to establish, in a humane fashion, what is most probable by regulated means rather than to pursue the strict truth, the certain knowledge of which belongs only to God,—and a tendency towards rationalisation, which, though it does not prevail always and everywhere, is nevertheless latent in, for example, the position allotted to the oath in the field of personal capacity for an acknowledge-
Shubrawi, Rector of the Azhar, whose determination on this occasion contrasts favourably with his behaviour on others (Djabarti, i, 195). Bayyumi’s works include handbooks on the Demirdashiyya and Bayyumiyya and a commentary on Dhill’s Insâni al-Kâmîl. He seems to have been most at home in hâdîth, on which he lectured when Shubrawi invited him to the Taybarsiyya College at the Azhar. The mosque in which he is buried was built by Mustafa Pasha, a wâli of Egypt (probably between 1757-1760), when according to Djabarti he became grand vezir (probably sometime between 1763/1765). Bayyumi did not leave any ascetics, but his dhîkhr was still popular during the mawlid in Lane’s days.

**Bibliography:** To Brockelmann, II 462, S I 784, S II 146, 475 add: Risâdat al-Tanbihal Muâlîk li man lâhu al-Wâdîd al-Kâmîl (MS in writer’s possession); Sarkis 622; Djabarti, i, 339; Lane, Modern Egyptians, 249, 401.

**BAYZARA,** (Arabic), denotes “the art of the flying-hunt”, and is not restricted to the designation of “falconry”. (Its Persian origin from bâz: goshawk; see below) is more closely related to the notion of “orстing art”). Derived from bâyzâr, “orstinger”, an Arabised form of the Persian bâzyâr/badâdar, it was preferred to its dual form bâzarra; the words bâzya and bîyâwa were scarcely used in the Muslim Occident. The use of rapacious predators (bâsîr, pl. kawasîr) as “beasts of prey” (dâjîrîh, pl. dâjwarîh) was undoubtedly known to the Arabs before Islam, and Imru’ul-Kays sketches in his asyâym al-sayd, some descriptions of flying-sport. However, hawking only assumed importance with them after the great Muslim conquests which brought them into contact with the Persians and the Byzantines. It quickly won the favour of the new leaders who discovered in it the possibility of diversion and of satisfying peacefully their passion for riding. Caliphs and high Muslim dignitaries were zealous in elevating it, with venery, to the rank of an institution under the direction of a “master of chases” (amir al-sayd), and later (amir al-mulâk). The Umayyad caliph Yazid b. Mu’awiyah (680-83) was one of the first to show an unbridled enthusiasm for the flying-hunt. Historians, biographers and chroniclers in the Arabic language provide information, each according to his own period and country, on the current practice of hawking, and relate for the occasion lively anecdotes of the exploits of certain princes in this field. (see al-Tabari, Ibn al-Akhîr, al-Suyûtî, al-Makrizî-Quatre-mère, in J. Sauvaget, Introduction, à l’Hist. de l’Orient Musulman.) Much more valuable is the information concerning bayzara found in certain encyclopedic works, edited for the purpose of adab or philological learning, such as the K. al-Bayawînî of Al-Dihiq (Cairo 1947), the Al-Mubâjjasa of Ibn Sida (Alexandria 1904, vol. viii, and indices by M. Tahli, Tunis 1956), the K. Sûkh al-Áthdâ of Al-Kalkashandi (Cairo 1933, vol. ii), the K. Murûdî al-Dhâhabî of al-Mas’ûdî.

The Maghrib and Muslim Spain, as well as the Orient, had their enthusiasm for the hawking-sport. In Aghlabid Ifrikiya, the governor Muhammad II (864-75), called not without reason the “Cransman” (Abu ’l-’Gharânî), exhausted the state exchequer with his wild expenses on the “flying-play” (lakh) (see Ibn ’Idhârî, Bayân, trans. Fagman, Algiers 1900, 147-48). Later, the Hafsids, too, were smitten by hawking. Like a Sâsânî prince, Al-Mustansîr (1249-77) found his pleasure, with the hawk on his fist, in a vast “preserve” (masyad) near Birzarta (see Ibn Khalînî, K. al-Ihbar, trans. De Siane et Casanova, ii, 339). In the 15th century his descendant, Uthman ‘Ali (1433-88) spent several days a week in this entertainment (see R. Brunschvig, Deux récits de voyage inédits . . ., Paris 1936, 212). At the Umayyad court in Cordova, the Grand Falconer (Sâkhîb al-bayyâyîsra) enjoyed a high office, close to the ruler (see Ibn ’Idhârî, op.cit., in E. Lévi-Provençal, X° s., Paris 1932, 55). The fashion of hawking, widespread in the countries of Islam during the Middle Ages, was the livelihood of a great number of people, and its practice was not limited to the privileged classes, as it was in Christendom. The rural population and the nomads continued to devote themselves to it and preserved the tradition, down to the beginning of the 20th century. From this fact it is easy to evaluate the rôle played by the sporting-bird in Muslim economic life, especially during the medieval period, by the commerce it provoked and the people required for its maintenance (see A. Talas, La vie économique aux II° et III° siècles de l’Hégire, in Arabic in Madjalalt al-Madîmât-ir’âhî, 1952, ii, 271-301; al-Dîhiqî(7), K. al-tabâsuqur, bi ’l-I’djâra, ed. H. H. Abdul-Wahab, Cairo 1935 34-35, trans. Ch. Pellat, in Arabica, i, 2, 1935, 150-61).

Most often, in fact, the master of the hawk-keepers train was not a falconer in the strict sense of the term, and he only put on the glove (dastabâm; Maghrib: bûfâz) during the hunt. The care of the “hawk’s room” (bayt al-tuyur) was entrusted to hawkers’ assistants (ghulâm, pl. ghulâmân) who had besides the task of keeping the aviary well provided with pigeons and other game-birds, for the nourishment and training of the hawks. The latter, a technical term of the bayzara, necessitated, according to the kind of sporting-bird, the competence of the orstinger (bâzyâr pl. bayâsira). On the preference of bâzyâr to bayzâr see Ibn Sa’dî al-‘Akânî, Irghâd al-Mâhâsîd, 92; the terms bayyâzâ, bayyâzâ, biyâs, bîzây, bayânî in the general sense of hawk, are Spanish-Maghribî, and frequently give way to fâyyûr, or of the falconer (sâkhîr); both were often assisted by the kalldbâz, the master of the hawking pack who sets his greyhounds (sulâkîh, pl. sulâkîyya) to the gazelle or the hare, and the Goshawk, occasionally the Saker Falcon or even the eagle, flying “waiting on” (hâzîm), distances the pack and bends to the quarry.

The traditional classification in the Orient of predators worthy of training (dardâwa and dardâ’), based on the black or yellow colour of the iris denoting remarkable visual powers, corresponds exactly to the modern ornithological system. In fact the “dark-eyed birds” are found only in the genus Falco, “falcomidae”, who alone have a black iris. These are “long-winged sweeping birds, lured-birds, used to “highflying” (the flight of the heron: bâhshîn, of the crane: türkî or ghirnîk, of crows: ghirbân, from time to time the eagle: wâbl, the kite: kâdî, and the wild waterfowl: ayr al-ma’â). The Arabist is often puzzled by the abundance of terms designating sporting-birds, a such abundance not being due to the multiplicity of types, but to the great variety of adjectives qualifying the innumerable shades of plumage worn by the bird according to its sex, its age and habitat. The Arabs saw several different types when it was only a question of individual birds of the same family, whether immature, young or adult, male or female. One can discover, however, among that accumulation of names
the generic term, with the aid on the one hand of scientific inventories of the avifauna of each country, and on the other, of the descriptions provided by the great Muslim naturalists, such as al-Khwārizmi (1203-1283) in his K. ʿAǧāʾib al-Makhlūkāt, al-Damīrī (1341-1405) in his K. Ḥayāt al-Ḥayawān, and especially by the authors of cynegetic works (see below).

Thus the saḥkār, falconer, was occupied in training only: a) the Ger-Falcon, Falco rusticolus, (sunbūr, ḥunbūr, ḥunbār) which, unknown in the Arab countries, had to be imported at great expense from Siberia, and which often figured among the ceremonial gifts upon an exchange of ambassadors; b) the Saker Falcon, Falco cherrug, (sārḥ, sāḥr al-ghazāl, ṣḥār); c) the Peregrine Falcon, Falco peregrinus, under its three original sub-species: peregrinator, babylonicus and cailidus (either šāhīn or bahārī for the "Passage-Peregrine"); d) the Black-winged Kite, Elanus caeruleus (curraḥ, sāḥr ab-yāṭ, and Perā, ḫāṭ); e) the Merlin, Falco columbarius acaulo (yuʾyuʾ, ḡalām); f) the Hobby, Falco subbuteo (ḥawīnād); g) the Kestrel, Falco tinnunculus (ṭāsāḥ); h) the Lesser Kestrel, Falco naumanī (wawasīḥ); i) the Red-footed Falcon, Falco vespertinus (luṣayk) (see A. Maʿālikū, Muḍjam al-ḥayawān, Cairo 1932, to be consulted with great care in view of the numerous errors in a scientific apparatus so often outdated).

In the Muslim West highflight hawking knew only four falconidae: the Saker (nuḥūl or lublūl, derived from the name of the Andalusian town Nuéba, which points to a loanword); the Barbary Lanner Falcon, or the "Alphabet" of the Christian falconsers, Falco biarmicus (burnī); the Barbary Falcon, Falco peregrinus peregrinoides (turkhī); and Eleanor's Falcon, Falco eleonorae (bajirī); (see Leo Africanus. Il Viaggio, Venice 1837, 166; L. Mercier, La chasse et les sports des Arabes, Paris 1927, ch. V, La fauconnerie, 81-106, and bibli.; E. Daumas, Les chevaux du Sahara, Paris 1853, with the Réflexions de l'Emir Abdelkader, 359-372). These four falcons are described in the Ḥayāt as "noble" (ḥarr). As for the "yellow-eyed birds," raised only by the ḥāzār, ostragers, they are the class most used in the hawking sport. They are all "short-winged soaring birds" or "fist-hawks" trained for "low-flying". This category is composed largely of the genus Accipiter or accipitrinae and includes in some parts of Persia and Turkey the smaller aquilinae.

The birds which has enjoyed the greatest favour since remote antiquity and in every country of the Orient is undoubtedly the Goshawk, Accipiter gentilis, and its subspecies Accip. albidus (either bāzd, or ḍhāḥbāz) which, because they do not belong to the avifauna of the Arabic countries, were imported by merchants from Greece, Turkestan, Persia and India; the Maghribi scarcely knew of them. It was believed that the Goshawk was born to the flying art. Its Goshawk was born to the flying art. Its Hen (sāḥ) is still used at Cape Bon in Tunisia for flying at the passage-quail in spring (see D. M. Mathis, La chasse au faucon en Tunisie, in Bull. Société Sc. Natur. de Tunisie, ii, 3-4, Tunis 1949, 107-18 and illustrations; idem, in A. Boyer et M. Planiol, Traité de Fauconnerie et Autourserie, Paris 1948, 22-48; L. Lavudden, La chasse et la faune cynégetique en Tunisie, Tunis 1920, 20-21; al-Lalāʾī, in Arabic, Tunis, May 1955, 24-27 and illustrations).

As for eagles, they never have had in fact the rank of sporting-birds (ṭād al-fayr); however, Persians and Turks trained with success the Crested Hawk Eagle, Spizaetus cirrhatus (tughrāl), Bonelli's Eagle, Hieraetus fasciatus, and the Booted Eagle, Hieraetus pennatus (both called zumāmād). The Harriers (mazadā) and Buzzards (ṣāḥbād) were neglected owing to their untamable ferocity; the kite and the vulture (nāṣr) as well, because of their taste for carrion. The Persians carried the art of training as far as the Eagle Owl (bīḥa) which served to attract the other predators. All of the "yellow-eyed birds" were earmarked for the lowflying at the quail (zumānā, sabād), the partridge (ḥaḍḍ), the Chukar partridge (ḥaḍḍ) and the See-See (laṭyākūd), the sandgrouse (ḥāṭā), the Bustard (būḥārā), the Little Bustard (raʾād), the Francolin (durādād), the Ruddy Sheldrake (ṣāḥkūd) and other game-birds of the steppe and desert.

The techniques proper to ṣāḥbāzd were early in Islam the objects of numerous treatises which, for the most part, have not survived; Ibn al-Nadīm mentions ten of them in his Fīrāzī. On the other hand a large number of the manuscripts in the public and private libraries in Europe and the Orient have yet to be studied (cf. Brockelmann, chapters on "Naturwissenschaft" and "Jaqād"). Nevertheless these techniques are comparatively well known to us thanks to several works already edited. The oldest of these texts, treating falconry, might be the treatise of the Latin-Roman versions not yet identified but attributed to the two authors Moamin and Ghattrī (see the excellent critical edition of these texts by H. Tjerneld, Stockholm-Paris 1945). Recently, the Syrian Kurd ʿAlī had the happy idea of publishing (Damascus 1953) a treatise Al-Ṣāḥbāzd devoted to the falconry of the Fāṭimid caliph Al-ʿAzīz bī-l-lāh (975-996); the anonymous author offers us the profit of his own long experience and that of the specialists in hawking (luʿād) in a style stripped of extraneous erudition: poetical citations are arranged in a special chapter. This work is by far the most valuable of those we possess in Arabic on the training methods. At almost the same time Asād ʿĪlās (Baghdād 1954) the oldest known Arabic text, K. al-Masāqīd wa l-Matlārīd, the work of the famous poet Al-Kushāḏīm (d. 961 or 971) (cf. Brockelmann, I, 85, and S I, 137; ʿĪlās, Madjallā . . . op. cit., with an analysis of the work). This complete treatise on venery and falconry was one of the sources most exploited by later authors of cynegetic works; there emanates from it unfortunately too great a preoccupation with adab which relieves it of any practical significance. Very different and far more lively and useful are the "hawking-sport memories" of Usāma Ibn Munkīd (d. 1288) in his K. al-Ṣāḥbāzd (ed. P. Hitti, Princeton 1930, ch. iii,
BAYZARA

192-229) composed during the period of the Crusades (see Derenbourg, *Vie d'Ousma...*), and texts, Paris 1885 and 1893. The work of the Mamluk Muhammad al-Mangil, *K. Uus al-Malā* bi-Wāhā al-Fādā, written in 1371 (cf. Brockelmann, II, 135 and S II, 167) and published (Paris 1880) with a mediocre French translation by Florian Pharaon, has lost much of its value since the treaty of Al-Medija. These compositions deserve publication, though they have already been exploited by L. Mercier (op. cit.) who has in addition used the manuscripts of Al-Fākhi (d. 1541) and Al-Asfārī (1444) (MSS. Paris, B.N. nos. 2831 and 2834). Ţalās (*Maqal...*) has restored to its original version the beautiful *ardjūsara* on the flying-sport by Ibn Nūbātā (1287-1366) entitled *Fārād al-Sulāık ji Māsāyid al-Mulāh.*

From all these texts it results that snaring and training methods were nearly the same for all species of sporting-birds. The young hawk was caught "eyes" or "yellow beak" (*khiṣrī, khīṣrī*) or "branchiers"-*rockers*, i.e., the nest-forsakers (*nūhād*) from her eyrie; when "red-falcon" (*farkh*) or "haggar" (*wākkāh* "native" or "passage-hawk") (*kalādāli* or *rādāji*), she was limed or snared by means of nets, of nooses and chiefly of "flying-decoys" (*bīrah*) (cf. the system of the hut in Ibn Munkiḫ, *op. cit.,* 200-01; M. Planiol, *op. cit.,* 154-56). When captured, she was "reclaimed", i.e., made tame (*laʾbīr, lahīdī*); her eyelids were "sealed" (*khayt*) and she was "abated" (*kāṣirī, ṭankī*) by fasting and then, progressively unsealed, she was induced to step, of her own accord, on the fist by offering her some "beakfuls" (*ṣabbī*). When become tame and stepping on to the fist at call, she was tied to the "creance" (*Missing*) and it was now the beginning of her training to stoop at such and such game. When estimated "ensued" (*mustuṣī* li-i-ṭirās), the pupil was lifted with "jesses" (* Missing*) and "belts" (*ṣārīfī*, *kāhīfūlī*) and then she was accustomed to wear on her head the "hood" (*būrāh, ḫumma, ḫumra*), Maghribi: *kanbīl* and to be "mailed in the sock" (*kabābī*), gaining some "manning" (*uns*) by long hours spent among the crowds of the streets and markets. Once familiarised with people, horses, dogs and domestic animals, she was taken to the hunting places where she was flown "for good" (*ṣāda ṭalīm*) at waterfowl and sparrows. She returned at the sound of a drum (ṭanbāl) attached to the saddle of the falconer (see L. Mercier, *op. cit.,* 98), and she was allowed to "take her pleasure" (*ṣābīb*) on one of her takes. In the Maghrib training was never carried to such a degree of refinement: always taken in adulthood, the bird was released in the autumn and underwent only a rudimentary training (cf. L. Mercier, *op. cit.,* 96-104). Being set down to rest, the hawk was placed on the "block" (*karnasa, ṭalhrī*) and then she was kept apart, from any noise, and her "mutes" (*ḥārk, ṭamūdī*) were carefully controlled. By this means her good health was restored. The treatises on *bayzara* devote long chapters to the diagnosis of diseases particular to sporting-birds and their cure, revealing most often a barbaric empiricism combined with hygienic superstitions.

From the time of the Prophet the question has been posed, with regard to Kur'ānic law, of the legality of eating a game-bird caught by means of a trained (hawk) predatory; it was a question of whether the bird ought to be slaughtered in accordance with the rites. Averroes, in his *Bidīyat al-Mugājāh...*, (cf. Averroes, *Le livre de la chasse*, ext. of the *Bidīya*, text and trans.; annotated by F. Viré, in *Revue Tunisienne de Droit*, nos 3-4, Tunis 1954, 228-59), gives a clear account of the different positions adopted by each of the four schools of law. This same question constitutes the introductory part of all of the works dealing with falconry and venery.

The *bayzara* on the other hand did not fail to inspire poets and, from the time of the Umayyad period, it became with the coursing hunt one of the principal themes of popular poetry in *rādājār.* In fact the *ardjūsara,* more supple and lively than the rigid classical *kaṣida,* soon became, with al-Schāmmākī (d. 22/643), al-ʾAbīdī (d. 69/708), his son Ruβbā (d. 145/1662) and several others, the typical form of the cynegetic poem (*tarādisyya*). The latter, very much in fashion under the ʿAbbāsids, was adopted by the great masters of verse such as Abū Nuwās, Ibn al-Muʿṭazz, Kushādjm and Al-Nāṣīḥī, and afforded them, through research into rare terms (*ghitrīfl, ghitrīf*), the occasion of displaying their learning (*Ch. Pellat, *Langue et Littérature Arabes, Paris* 1952, 108-09) (on the *tarādisyya* see idem, *Le mot du basrîen*, 160 ff. and notes. *Tarādisyya* are found in the *šaâ"ins* of the poets; those of Abû Nuwâs are for the most part cited by Al-Djâhīz, *Bayazâdîn*). It is regrettable to note that this pedantic erudition led the use, by those who took pleasure in it, of a language which has very little in common with that employed by the lovers of the flying sport. In Muslim Spain the poets, especially from the 11th century, developed, by releasing before her training-birds (*kasira*) selected from the species for which she was being trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance. When trained to hunt. These exercises were patiently repeated, each time at a greater distance.
and embroidery, owe to the "hawk motif" a great deal of their inestimable accomplishments. Indeed, it is from this motif, in its innumerable interpretations that Muslim art of East and West has borrowed many of its characteristics (cf. A. U. Pope, A Survey of Persian Art, Oxford 1939; G. Migeon, Art Musulman, Paris 1956; G. Maçarès, L'Art de l'Islam, Paris 1946). We add in conclusion that this same motif was vastly exploited by Mamluk heraldry (cont. a l'étude du blason en Orient, Londres 1902).

Bâz [see BAYZARA].

BÁZ BAHÁDUR, The last ruler of independent Mâlwa before the Mughal conquest in the time of Akbar, Bâz Bahâdur was the son of Shûdja' Khân, a relative of Shir Shâh Sûr, whom the latter appointed governor of Mâlwa after its conquest by Shir Shâh's forces in 949/1542. On the death of Shûdja' Khân in 962/1554, Bâz Bahâdur murdered his brother Dawlat Khân, governor of Ujjain (Udijâin) and had himself proclaimed as sultan in 963/1555. He then brought most of Mâlwa under his rule by forcing his youngest brother Mustâfâ Khân to give up Râsin and Bhilsa. In 968/1560-1, a Mughal army under Adham Khân advanced to conquer Mâlwa. Bâz Bahâdur was forced to relinquish his capital Mandû and was forced to retire to his refuge there. Five years later he made several guerilla attacks upon the Mughal forces, he grew tired of the trouble and in 978/1570 submitted to Akbar eventually to receive a mansâb of 200. He died not long after and is probably buried at Ağra.

Bâz Bahâdur is celebrated in popular legend for his love for his mistress Rûmânat for whom he is said to have composed love-songs and verses. He is also an eponymous figure in the development of a new passionate style of central Indian painting, in which the twin cultures of Mâlwa, Hindu and Muslim, were blended.

BAZA [see BASTA].

BÁZÁHR, Bezoar, a remedy against all kinds of poisons, highly esteemed and paid for throughout the Middle Ages up to the 18th century, and in the Orient even up to this very day. The genuine (Oriental) Bezoar-stone is obtained from the bezoar-goat (Capra aegagrus Gm.) and, according to the investigations of Friedrich Wöhler, the famous chemist (1800-1882), and others, it is a gall-stone.

The stone seems to have been unknown to ancient Arabs, for neither in the lexica nor in A. Siddiqi, Studien über die persischen Fremdwörter im klassischen Arabisch, 1919, is the word mentioned. The generally accepted etymology is Persian (pl)zd-zahr "against poison" (P. Horn, in Geiger-Kuhn, Grundr. d. ir. Phil., i/2, 159). The Arabic books of stones and drugs present various spellings and etymologies that do not always correspond with each other, nor are the etymologies themselves throughout correct (see later).

For the first time in Islamic literature the Bazahr seems to appear in some of the Hermetic writings (none of them printed), and in the (partly edited) pseudo-Aristotelian writings inspired by the Oriental translations of the Alexander Romance. In the Lapidary ascribed to Aristotle (J. Ruska, Das Steinbuch des Aristoteles, 1932, 104 f.), Bazahr is erroneously stated to be Greek, while the explanation is the usual al-natf il-'samî. The poisons coagulate the blood; this effect is prevented by the stone which frees the body of the poison by strongly sweating. Aristotle also registers the different colours of the Bazahr and the places where it is found, namely, China, India, the "East" and Khurasân. Also as amulet and sealing-stone the Bazahr is useful, as well as against the sting of poisonous insects (see below).

Some MSS. of the pseudo-Aristotelian Sûr al-Asdr (Secretum secretorum) offer a chapter on precious stones, namely, Oxon. Laud 210 and Paris 2418. The text of the former was translated in Opera hactenus inedita Rogeri Bacoñi (1): V. Secretorum secretorum, ed. R. Steele, 1920, 233; the latter has only been noted by Abdurrahmân Badawî, Fontes Graecae Osce, doctores series xi, London 1922, 156.

Some MSS. of the pseudo-Aristotelian Sûr al-Asdr (Secretum secretorum) offer a chapter on precious stones, namely, Oxon. Laud 210 and Paris 2418. The text of the former was translated in Opera hactenus inedita Rogeri Bacoñi (1): V. Secretorum secretorum, ed. R. points to the Hebrew text (ed. and transl. by M. Gaster, JRAS, 1907-8, para 130). The name of the stone rendered al-naf† al-dur§r in Grčmish al-r구r (Hebrew ґשְרֵי הָרַעַר) (?). Its action is described similarly to that in the above-mentioned stone-book. The Ḥik̲h̲wān al-Sāf̲r̲i, ii, 81 Bombay = 104 Cairo explain the action of the stone in an elaborate theoretical way. It is worth noting that they use the name also as an appellative in the plural, along with summāt̲i and taryāq̲i. In the K. al-Summ̲m wa-Daft̲f ̲mad̲r̲s̲a by Ḍābib b. Ḥayyān, Bāz̲i̲r̲sh is, according to A. Siggel, Das Buch etc., 1958, 213 mostly used in the sense of "antidote" in general; only on 186 Siggel translates "Bezoar." The stone is only called one of the major remedies. Ḍābib is one of the sources quotes by al-Br̲i̲r̲sh in his elaborate article, al-D̲i̲zm̲āh̲r̲ fi Ma^rafi/al-D̲i̲wāw̲āh̲r, 1355, 200-202; cf. M. J. Haensch, Die Quellen des Stein-buches des Berūnī, Thesis, Bonn 1935, 19, who does not realise that the numerous quotations from Dā′ibī's K. al-Nukhab mean his K. al-Bahir, extant in MS. Istanbul Diārūll̲āh 1721. Al-Br̲i̲r̲sh's account, deriving from various sources, although opening with the statement that the stone is a mineral, offers also descriptions which make its being an organic material possible. He also teaches methods of examining its genuineness, and concludes with anecdotes.

The next author according to chronology is al-Ḥāfīk̲i, for the time being accessible only in Barhebraeus' abridgment, ed. M. Meyerhof and G. P. Sobhy, 98, para 185 (English translation 356-58 with elaborate commentary, where later sources are quoted in extenso). Al-Ḥafrīk̲i's rendering of the name is mād̲s̲i̲w̲m̲ al-samm. For al-Tīf̲s̲ī̲, see also the long chapter on Bāzar in Clément-Mullet, J.A., vi, 1868, 143-50. Later sources not quoted by Meyerhof-Sobhy: the Arabic text of Ibn al-Baytār, 1291, i, 81 f.; the German version of al-Kawāzin (J. Ruska, Das Steinbuch aus der Kosmographie des al-Kawāzin, Kirchhain, 1896). Al-Tīf̲s̲ī̲ and also al-Anṭāk̲i, Taq̲h̲irat ʿu̲l̲i̲ ʿl-alb̲āb̲, i, 60 call the stone ṭāk̲h̲-ẓ̲ahr "cleaning from poison," cf. F. Anastase-Marie de St.-Elie's commentary on Ibn al-Akhārī, Nukhab al-D̲i̲zm̲āh̲r̲, 1939, 75 ff.; para 13. A story of a lad struck unresponsive by a drink of incense sealed with a seal of Bāz̲i̲r̲sh is preserved in Ahmad b. Yūsuf ibn al-D̲i̲āyā's commentary on Ps.-Ptolemy's K. al-Th̲a̲m̲ara (Centloquium), aphorism 9, and was reproduced in Gḥyāṣ al-bāk̲h̲ (Picatrix), ed. Ritter, 1933, 55 (in the forthcoming German translation 56).

On the later history of the Bāz̲i̲r̲sh, also in Europe, and its high esteem in contemporary Persia see C. Elgood, Medical History of Persia, 1951, 369-71 who also describes modern methods of examining its genuineness.

Bāz̲a̲r̲ [see ១ុ១ខ].

Bāz̲a̲r̲g̲ān [see ឃុំ].

Bāz̲i̲g̲h̲ b. Mūṣ̲a, called al-Ḥāṭ̲ik̲, Shī'ite heretic. A disciple of Abu ʿl-Khaṭ̲ṭ̲āb [q.v.], he was, like his master, denounced by the Imām Dī̲j̲̲̲ra̲r̲ al-Sād̲ik̲ as a heretic and was even, according to Nāwbaḵšī, disowned by Abu ʿl-Khaṭ̲ṭ̲āb himself. Kash̲a̲l̲ reports a tradition that when Dī̲j̲̲̲r̲̲̲̲r̲ al-Sād̲ik̲ was told that Bāz̲i̲g̲h̲ had been killed, he expressed satisfaction. This would place Bāz̲i̲g̲h̲'s death before that of Dī̲j̲̲̲r̲ al-Sād̲ik̲ in 148/765. Like many of the early extremist Shī'ites, Bāz̲i̲g̲h̲ was an artisan—a weaver of Kōfa, and some amusement was expressed at the religious pretensions of one of such lowly status. His followers were known as Bāz̲i̲gh̲iy̲a.
BAZINKIR — BEDJA

state in the Sudan, Oxford 1958; 52, 56, 94, 196). After the defeat of Sulayman b. al-Zubayr (1879), a group of his bdzinkir, commanded by Rābiḥ Fadl Allāh (Rābiḥ al-Zubayr), escaped westwards, and Rābiḥ made himself ruler of a territory in the Chad region, where he was defeated by the French and killed in 1900 (Richard Hill, op. cit., 312-13: Max v. Oppenheim, Rabeh und das Tchadseengebiet, Berlin 1902). Of the bdzinkir who remained in the Egyptian Sudan many were probably incorporated in the djihādiyya, the Mahdist professional soldiery, or in the Sudanese battalions of the new Egyptian army. 'Arabī Dafā' Allāh, the Mahdist governor of al-Radjīdīf (upper White Nile) raised new bdzinkir, sending 600 as tribute to the Khalīfa ʿAbd Allāh in Shawaṭāl 1312/March 1896 (Sudan Government Archives, Khartoum; Mahdīa 1/32, 18/1, 75/1; 1/32, 18; 76; 1/34, 1, 10).

(P. M. Holt)

BAZİRGAN, Bezirgan, Turkish forms of the Persian Bāzārγān, a merchant. In Ottoman Turkish usage the term Bāzirγan was applied to Christian and more especially Jewish merchants. Some of these held official appointments in the Ottoman palace or armed forces; such were the Bastırγan-bahāği, the chief purveyor of textiles to the Imperial household (D’Ohsson, Tableau général, vii, Paris 1824, 22; Gibb-Bowen, 1/1, 359), and the Öğüz Bāzirγanlū, the stewards, usually Greek or Jewish, who handled the pay and supplies of the corps of Janissaries. This office tended to become hereditary in certain families (D’Ohsson, 318; I. H. Uzunçarşılı, Kapukulu Ocakları, i, Ankara 1943, 407 ff.).

(B. Lewis)

BAZİKYYUN (Pazāki), a tribe settled, according to M. A. Zaki (Taʿrīkh, 370-71) either in Persia or in Turkey (having relations with the tribe of Suwayd). The tribe was divided in two parts: Khālid Bekbū and Shaker Bekbū, of which the former was more important. Its places of habitation were Khnis, Malāzgird and to some extent Māsh. The latter was subject to the amir of Bizāl. The founder of the Khālid Bekbū was Husayn ʿAll Bek. His descendant, Khālid b. Shāhsuwar Bek b. Husayn ʿAll Bek, a fellow warrior of ʿAlī Bek. One of his battles in which he won fame but lost an arm, whence his sobriquet. One armed Khālid (like Ahmad Khan of Baradust [q.v.]: Khālid Dhuʾl-yad al-Wāhidā). As a reward for his valour, the Shāh gave him Khnis, Malāzgird and the nādīya of Ukhān (Udākān) at Māsh. Later he declared his independence of the Shāh and allied himself with Sultān Selim Yāwūz. This submission was, on the other hand, of short duration; he was finally arrested and executed, though his family continued for a long time to exercise power. During the time of his son amir Kūlidj Bek, a part of the tribe emigrated to the Donboll (q.v.), though remaining subject to the Ottoman sultan. The existence of a tribe of this name is, on the other hand, mentioned by M. A. Zaki (Khuldsat Ta’rīkh) in the region of Tہīr (15), in the south of Persia (465) and in the neighbourhood of Ervān (466). A Pāseguī tribe is mentioned by Lerch (i, 96) at Tarow.

(B. Nikitine)

BĀZĂZĪSTĀN [see Қўшариyya].

BEČ (Begov), the Ottoman name for the town of Vienna. The Turks (as also the Serbs and Croats) took this word from the Hungarian word meaning of “suburb, outer city” (Hungarian: külsős; hence it is explained as kultar by Ewlyía Celebi, vii, 251), where the word probably goes back to the Kuman-Pečenek (perhaps also Avar.) beć (Gombóc-Melich, Magyar Etymológiai Szótár, Budapest 1914 s.v.). There is only scanty and superficial information on the town in Ottoman geographical literature and diplomatic reports (cf. Hammer-Purgstall’s translation from Ebū Bekir b. Behrām in the Archiv f. Geographie, Historie, Staats und Kriegskunst, 1828, 28 ff.; also; hammer-Purgstall, viii, 215; Fr. Kraeßlitz, Bericht über den Zung des Grossbotschafters Ibrahim Pascha nach Wien im Jahre 1719, in SBA Wien, 1907), although in the 16th and 17th centuries, Vienna was the immediate goal of two large campaigns under sultan Suleyman the Magnificent and under the Grand Vizier Kara Mustafā Pasca (cf. Sturminger, Bibliographie und Iconographie der beiden Türkenbelagerungen Wiens 1529 und 1683; Vienna 1955; comments on this in WZKM 52; and R. Kreuel, Kara Mustafa vor Wien, Graz 1955); Ewlyía Celebi is an interesting exception. He claims to have visited Vienna (cf. WZKM, 31, 188 ff.) in 1665 in the entourage of the Ambassador Kara Mehmed Pascha. His extensive description of the town (Siyāhat-nāme, vii, 247-292; translation: R. Kreuel, Im Reiche des Goldenen Apfels, Graz 1957) contains numerous absurdities, as well as many correct observations. In the first half of the 19th century (lanzimāt), the name Beć was replaced by Vyiana (from Vienna) in Ottoman writing, and today this is the usual form.

BEDEL-J ʿASKERI [see BADAL].

BEDEL-J NAKDI [see BADAL].

BEDEL [see BADIL].

BEDJA (usual Ar. form, Budja), nomadic tribes, living between the Nile and Red Sea, from the Kina-Kusayr route to the angle formed by the ʿAtbarā and the hills of the Eritrean-Sudanese frontier. The principal modern tribes are the ʿAbbāda (q.v.), Bīghārīn (q.v.), Ummarār, Hadanduwa and Bānil (q.v.): The ʿAbbāda now speak Arabic; the others (except the Tigre-speaking sections of B. ʿAmīr) speak tu-Bedawiyeh, a Hamitic language. The Beđja subsist mainly on their herds of camels, cattle, sheep and goats. Since grazing is sparse, they move usually very small groups. Beđja origins are obscure but Hamitic-speaking groups have inhabited the region from ancient times. The usual identification with the pre-Islamic Blennymes was rejected by Becker (see Beđja in EI).

Relations with Muslim Egypt. ʿAbd Allāh b. Saʿd encountered some Beđja on his return from Nubia (31/651-2) but regarded them as politically insignificant. The first Beđja-Arab treaty, made with ʿUbayy Allāh b. ʿAbīḥāb in the reign of Highān, regulated Beđja trade with Egypt and safeguarded the Muslims from their depredations. The Arabs penetrated Beđja territory in search of emeralds (mined in the desert of Kīft) and gold, found in the Wādī al-ʿAllāḥ (q.v.). The dominant northern Beđja tribe was the Hadārīr, traditionally descended from pre-Islamic immigrants from Ḥadhramawt. They were dismuted but there are occasional indications of a supreme chief, living in a village named Hadjar. Some of the Ambassadors Ṣanāʿīfī, acted as herdmens. Muslim immigration resulted in a superficial islamisation of the Ḥadhārīr and Arab-Beđja intermarriage. Beđja raids on
Upper Egypt led to a Muslim expedition, which defeated the chief, Kanun, and imposed a treaty (216/831). The caliph was acknowledged as sultan, mosques in Bedja territory were to be respected, Muslim merchants and pilgrims were to pass in safety, and collectors of zakat from converts were to be allowed entry. Other provisions sought to prevent an alliance of the Bedja with Christian Nubia. Further raids and the withholding of tribute from the gold-mines ensued. A cavalry expedition, sent by sea, defeated the Bedja camel-men, whose chief went to Samarra in 241/855-6 to make his personal submission to al-Mutawakkil. Soon however the Bedja began to raid al-Fustat itself. After a particularly severe attack, a force mustered by 'Abd al-Rahmān al-'Umarl intercepted a raiding-party and killed its chief. Supported by the Rabīya and Diushayna, al-'Umarl established control over the mining districts (c. 253/868-9) and, after his death, Rabīya, who intermarried with the Ḥādrīb, came to dominate the area. Al-Mas'ūdī describes the chief of Rabīya in 332/943-4 as the owner of the mines; he commanded 3,000 Arabs and 30,000 Bedja camel-men. The ratio is probably more significant than the numbers. The rise of 'Ayyūsbah in the mid-9th century increased the importance of the Ḥādrīb, whose territory was crossed by the route from the Nile valley to the port. A chief, called Ibn Baṣṭāṭa al-Ḥadraḥī, shared in the customs of 'Ayyūsbah. Information about the southern Bedja is sparse. Al-Yaṣirī lists six Bedja “kingdoms”.

Uswān depicts the further Bedja as a fragmented, pagan society, in which each group had its own khdin to give guidance on grazing and raids.

Decline of the Ḥādrīb and formation of the tribes. By the 8th/14th century the gold-mines had been abandoned and 'Ayyūsbah was in decline. These economic factors may explain the disappearance of the Ḥādrīb, who appear to have migrated southwards, perhaps becoming the Balaw ruling-caste which dominated the Bedja of the Suakin-Massawa hinterland. The spread of Arab tribes up the Nile and the establishment of the Muslim Fundji sultanate (c. 910/1504) resulted ultimately in the general, if imperfect, this was a time of pacification and development.

BEG or BEY, a Turkish title, "lord", used in a number of different ways. The various dialect forms (bâg, bâk, bek, bey, biy, biy, bag, etc.) all derive from the old Turkish bag as seen from the Orkhon inscriptions (8th Century) and the Chinese transcriptions concerning the Turks of Mongolia of the same period. The word has no Altaic origin (Mongol beg meaning a later loanword from Turkish; the series Turkish bârka, bâk/bâk/bāk "strong, sound", etc., owes nothing to the old Turkish bâg and should be dissociated from it; the same is true of the series: Turkish bâgâ, bâg "wise-man, sorcerer", Mongol bâg, hê "Shaman"). Like many other titles, bâg is a loan-word possibly deriving from the Iranian bag, viz. the title of the Sâsânid kings ("divine", from an older form baga "God", cf. Bag-dâd).

In the Orkhon inscriptions the compound term bâg-lâr refers to the "nobility", "the order of beys", as opposed to the bodun "people, masses". The word bâg also appears in these texts to denote the second rank in the hierarchy of high dignitaries. Finally, there is the evidence of a Bars Bâg who becomes Khan and brother-in-law of the Turkish Grand Khan. These different usages show that the title bâg (as later with beg or bey) does not imply a specific position or duty but is essentially honorific. Hence among many Turkish peoples it is joined to the name of the "eldest brother", aghâ (bâg aghâ, or agha bâg = old Ottoman aghabey "lord elder brother"). Some Turkish societies have reserved the title for personages of high rank; others have given it an extended general meaning of "chief", "master", "husband" or "Mr.". It can only assume a precise connotation in a given social and administrative context, often as the second part of a compound (on begi "chief of ten", corporal", Golden Horde; Ott. sandjak beyleri; etc.); or as a title when used with a proper name which it usually follows: Bars Bâg, Mehmèd Bey. The feminine title of Begum [q.v.] is simply a possessive form of the 1st pers. sing. of beg (= bâg-im "my lord", thence "my lady"); cf. khan-um, a similar possessive formation which has assumed a feminine connotation.

(L. Bazin)

ii. In Islamic times we find the word applied under the Karâkhanids to at least one high official; and it was the title first borne by Tughrul and his brother Câghrâl, the founders of the Seljûk empire. Under the Seljûks and other subsequent Turkish régimes, as Turkish terms began to be used officially side by side with the traditional Arabic and Persian, beg came to be employed as the equivalent of the Arabic amir, as in the titles beglerbegi or beylerbeyi, equivalent to amir al-umârât; and sandjak beyleri, equivalent to amir al-lîsad. Under these régimes, again, whereas the great monarch would be entitled khârîm, khan, or sultan, lesser sovereigns, such as those of the Anatolian states successor to the Seljûks, the Kara-koyunlu, and the Akkoyunlu, were entitled beg, as indeed was the great Timûr himself.

Under the Ilkhânids beg was sometimes used for women, and under the Moguls of India the feminine form, begam, was common. Under the Safawids, since the ruler went by the title shâh, beg lost ground for lesser personages to khan and even sultan. Under the Ottomans, on the other hand, it remained in wide use for tribal leaders, high civil and military functionaries, and the sons of the great, particularly pashas.

BEGDILI, a tribe of the Boz-ol branch of the Oghuz (Turkmen) peoples. Anqštâgan, ancestor of the Khârâmâyînama dynasty, is sometimes believed to be of this tribe, but this is probably not so. A large Begdili community was found among the Turkmen tribes in Syria in the 9th/10th century. At that time they were led by Tashkun (Tashkun) Oghullari. They were regarded as one of the most important Turkmen tribes in Syria in the 9th/10th century. Another important branch of this tribe lived in the 14 villages of the Gîlân district of the Îlî province in the same century; their leaders were in possession of fiêfs (dirîk). The Begdili of Syria were the largest of the Turkish tribes in the Aleppo region in the 10th/11th century; they had 40 clans during the first half of the same century. The Syrian Begdili also had important clans in the Yeni Îl and among the Boz Ulus in the Diyarbakr region. Another branch of these Begdili went to Iran together with the khan of the Shâmilî tribe. The great garrisons between Diyarbakr and Aleppo were, in the 11th/17th century, in their possession. They were, however, punished by Khosrow Pasha during his Baghdad expedition (1039/1630), for refusing to pay taxes and for allowing their cattle to destroy the crops of the local people. They are estimated to have had 12,000 tents during the second half of the same century. Like many other tribes, the Begdili were called to take part in the Austrian campaign in 1101/1690. A few years later the government made an attempt to settle the Begdili and other Turkmen tribes among them near, in the Rakka region. Consequently some Begdili settled in Rakka and the rest in the Aleppo and Ayntâb region. As already mentioned a branch of the Syrian Begdili went to Iran together with the Shâmilî. Many important Şafawi commanders and governors were of this tribe. A branch of Begdili is seen among the Göklen Îli in the Astârâbîd region.

(Faruk Sûmer)

BEGLERBEGI, beylerbeyi, Turkish title meaning 'beg of the begs', 'commander of the commanders'. Like other titles it suffers progressive debasement, having originally designated 'commander-in-chief of the army' it came to mean 'provincial governor' and finally was no more than an honorary rank. In the first sense it was used by the Seljûks of Rûm as an alternative title for the malik al-umârât and by the Ilkhânsids as the title of the chief of the four umârât al-ulûs. In the empire of the Golden Horde the title was used for all the umârât al-ulûs. In Mamlûk Egypt it was perhaps used for the alâsîb al-as-sâbîr. (For references to the sources see M. F. Köprüçüzâde, Bizans Müesselerinin Osmanlı Müesselerine Te'siri, Istanbul 1931, 190-5; Italian translation, Alcune osservazioni... Pubblicazioni dell'Instituto per l'Oriente di Roma, 1944, and I. H. Uzunçarşî, Osmanlı Dedalet Tarihîlinden Medehal. Ist. 1944, index; also D. Ayalon in BSOAS XVII, 1954, 253-266.)

Among the Ottomans too the title seems to have meant originally 'commander-in-chief' (in which sense it is used by Sa'd al-Din, i, 69). It is said to have been first bestowed on Lala Shahin by Murad I when, after the capture of Edirne, he himself returned to Brusa (Giese's Anon. 22, = Urdâd 22). Lala Shahin was succeeded by Timurtash, still apparently the sole beýlerbêgi, who was left to guard Anadolu
when Bâyezid I marched against Mirce (Nezâr [Taeschner] i 86). When Mûsâ, during the 'time of troubles', had seized the European territories he appointed a vezir, a hâkkâsh pashazâde [Giese § 69]. By the end of the reign of Mehmed I at the latest there existed two beglerbegis, with territorial designations, one of Rumeli' and one of Anadolu' [cf. 'ÅPz. § 81, 'beglerbegi of Anadolu' and § 83, 'beglerbegi of Rumeli'; such references for earlier periods in later historians may be anachronisms). This was clearly the case under Murad II, by which time the beglerbegis of Rumeli and Anadolu were the governors-general of the two provinces, their main responsibility being the supervision, through the sandjak-begis [q.v.], of the feudal sipâlâhs, whom in time of war they led into battle. As Ottoman territory expanded, new provinces were created, so that by the end of the 16th/17th century the beglerbegis numbered nearly forty. The beglerbegi of Rumeli (who from 942/1536 onwards was admitted to the divân, i.e. Feridûnî i 595) always took precedence, the others, if of the same rank (see below), taking precedence according to the dates of the conquest of their provinces. It was not unknown for the Grand Vizier to hold also the office of beglerbegi of Rumeli.

It is clear from a Rûmân-name of Mehemmed II that already in his reign beglerbegis had come to be also an honorary rank (as it had perhaps been under the Saljûqs of Rûm, cf. Kprüûtûzade, op. cit., 192), holders of which took precedence immediately after westirs. By the end of the 11th/12th century Rumelî beglerbegisi too had become an honorary rank, besides denoting the actual governor-general. Conversely, from the 16th/17th century onwards, the office of beglerbegi of important provinces was often bestowed on holders of the rank of vezir, who had authority over beglerbegis of neighbouring provinces. The vezir was entitled to three tughâs, the beglerbegi to two. Both westirs and beglerbegis bore the title pasha, whence the sandjak in which the beglerbegi resided was known as pasha sandjak. The beglerbegis were regarded as 'viceroys', sañânat usbîlî; he had a miniature court and presided at his own divân. At first succession of timârs and ziâmets, his appointments being automatically ratified, but after 95/1350 he could grant his own berât only the smaller (tekbiresi) timârs.

In the 12th/13th century the terminology became further confused, for (1) the name wâli [q.v.] was increasingly given to the governor-general, and beglerbegi in this sense fell into desuetude (except for the office of beglerbegis of Rumeli and Anadolu, to judge from D'OYsson, Tableau général, vii, 278); (2) the Persian mir-i mîrân, mîrîmîrân [q.v.], which had earlier been used indiscriminately (together with Ar. amir al-umara [q.v.]) as a synonym for beglerbegi, was increasingly used to denote the honorary rank of beglerbegi, and bestowed as such even on governors of sandijaks. With the thorough re-organisation of provincial administration by the law of 1251/1864 the term wâli became the official designation of the provincial governor (cf. A. Heidborn, Droit public et administratif de l'Empire Ottoman, Vienna-Leipzig, 1908, 157 ff.). Thenceforth only the terms Rumelî beglerbegisi, mîrîmîrân and mir-i umara survived, and they only as honorary titles.

In the Şafawid state the beglerbegis formed the second of four classes of provincial governors (Tadžkirit al-Mulûk, tr. and comm. V. Minorsky, GMS New Series xvi, London 1943, 25, 43, 163).

Bibliography: Hammer-Purgstall, Staats...
time among the various rulers of Upper Mesopotamia, supporting first the Ayyubids against the Zengids, and later the weakened Zengids, to whom he married two daughters, against the sons of al-'Adil. Finally he set himself to opposing the ambitions of Badr al-Din Lu'tu', the lieutenant and successor of the Zengids, who was an ally of the Ayyubid al-Ashraf. At the end of his life, having no son and fearing the intervention of his different neighbours, Gökburhani bequeathed his principality to the Caliph, who brought it under effective occupation (630/1233).

Apart from diplomatic and military matters Gökburhani was concerned with various enterprises of social value, especially at Irbil, though their influence extended beyond the town itself. He instituted madrasas, khanaqahs, hospitals and almshouses, and public services in aid of pilgrims, as well as contributing to the ransom of prisoners of the Franks, etc. He seems to have been the first prince to celebrate formally the Mawlid festival, perhaps as a reaction to the Shi'i nativity festivals or Christmas as kept by the Irbil Christians. He was a devout and a well-read man, much visited by scholars and writers from foreign lands. In governing he was assisted, particularly on such occasions, by his vizier, who was known by reason of his former activities as Mustawfi of Irbil, and compiled the history of the town. Ibn Khalilikân and his family were among their most famous protégés. Around the town of Irbil, which had always remained Christian and somewhat aside from the current of Muslim history, there grew up a new lower town, and the whole became transformed into a Muslim centre of some standing. This advance, which was attended by a rather severe fiscal policy, was set at naught by the Mongol sack of 634/1237.

BEGTIMUR [see ŞAH L-ARMAN].

BEGUM (Indo-Persian Begam, Turkish Bâqum), feminine of Beg (q.v.). During the Mughal period of Indian history its use, as an honorific, was confined to the royal princesses only. Djâhânârâ Begam [q.v.] the unmarried daughter of Şâhdjâhân [q.v.], bore the official title of Pâşâh Begam during the reign of her father. She retained it even after the dethronement and subsequent incarceration of Şâhdjâhân. During Akbar's rule the Begams (queens and princesses) received from 1028 to 1610 rupees per annum as privy purse. After the death of Djâhânârâ, his widow Nûr Djâhân, received 200,000 rupees per annum allowed her by Şâhdjâhân. Mumtâz Mahall, the consort of Şâhdjâhân, drew 1,000,000 rupees annually from the Imperial Exchequer while Pâşâh Begam enjoyed an allowance of 600,000 rupees per annum, half in cash and half in lands. Awrangzib gave the latter 1,200,000 rupees per annum. Before the establishment of Pakistan (1947), Indian Muslim ladies of high and noble birth were designated as "begams". Now all married women in Pakistan, with the exception of those belonging to the poorer classes, are called "begams", the equivalent of khanım or Madame. In this sense the word is practically unknown to the Arabic and Persian speaking countries. Husbands, in public and private, not infrequently, address their wives as begam, scrupulously avoiding pronouncing their given names. Domestics and menials, as a rule, address their mistresses, in India and Pakistan, as begams. Conventionally, every newborn girl bears this word as a suffix to her name, but the practice is now fast disappearing.

BEKRI MUŞTAFA ÂĞHÎ, the name of a drunkard, who lived in the reign of Sultan Murâd IV (1623-1640) and is said to have led him into habits of drunkenness; the name bekri therefore in Turkish still commonly means a drunkard. In the popular literature and in the Karâgöz plays the drunkard Bekri Muṣṭafa Âğhî is a well-known figure, characterised by his sharp and ready wit and his Bohemian way of life. Ewliya even gives the title of a Tabîlûd: Bekri Muṣṭafa and the Blind Arab Beggar (Seyhhat-nâma, i, 654).

BEKTÂSHI, a Dervish order in Turkey. The patron of the order is Hâdîdî Bektaş Wallı, whose biography as given in the order's traditional writings, (the first version of which goes back about the beginning of the 9th/15th century) is legendary, its purpose being manifestly to bring together the saint with famous religious personalities and to account for the later political importance of the Bektâshiyâya by insisting on the activity of its alleged founder. It is quite out of the question that Bektaş was ever in relation with 'Oghmân or Orkha'n or that he consecrated the Janissary corps (established for the first time under Murâd I), as is maintained by the Bektaşhi tradition and by some historical sources written under its influence.

We can however consider as certain the appearance in the 7th/13th century, among the dervishes of Anatolia, of Hâdîdî Bektaş from Khurâsân. He was probably a disciple of Bâbâ İshâq [see BAYRAM], whose revolt had taken place in 638/1240. The aristocratic entourage of the rival Mawlawîyyâa order later laid emphasis on this. According to the researches of M. Fuad Koprulu, the order originated from the circle of his disciples. However, in the Mubâdid of Hâdîdî Bektaş, originally written in Arabic and translated into Turkish verse by Khâtiboglu and afterwards rendered also into Turkish prose, the secret rites and doctrines characteristic

Bibliography: Jacob, Traditionen über Bekri Mustafa Âga, in Kelelo Szemle, v (1904), 271; T. Menzel, Bekri Mustafa bei Mehmed Teyfik, ibid., vii (1906), 83; H. Ritter, Karâgööz, Wiesbaden 1953, index. (F. GIESE*)
of the Bektashiyya are not particularly emphasised. At all events, the order, whose immediate predecessors of the Bektashiyya are not particularly emphasised. At all events, the order, whose immediate predecessors appear to have been the Abdallah-i Rüm, already existed in the 8th/14th century; it was at the beginning of the 10th/16th century that the grand master Bâllin Sultan, the "second Pir", gave it its definite form.

Turkish dervish institutions had received their characteristic features in western Turkestan from Abûmad Yasawî (d. 562/1160); they had acquired an ever increasing expansion in Anatolia, but at the same time they had adopted heretical tendencies. The Bektashiyya was able to conserve a good deal of pre-Islamic and heretical elements. In those regions where the order absorbed Muslim as well as Christian sects it came to include a large part of the population, as for instance in southern Anatolia and particularly in Albania, where there arose a kind of mixed religion, composed of Islamic and Christian elements. Also other communities with closely related dogmas and rites, and especially the groups comprised under the denomination of Kütlbâsh, stood in certain relations to it.

The attitude of the Bektâshis towards Islam is marked both by the general features of popular mysticism, and by their far-reaching disregard for Muslim ritual and worship, even including the salah. In their secret doctrines they are Shî'îs, acknowledging the twelve imams and, in particular, holding Dâ'ûr al-Sâ'dik in high esteem. The centre of their worship is 'Ali; they unite 'Ali with Allah and Muhammad into a trinity. From 1 till 10 Muharram they celebrate the nights of mourning (müsleml ehgereler); also the other 'Alid martyrs and especially the ma'sûm-i pîk (those who perished in infancy) are highly venerated by them. In the 9th/15th century the cabbalistic number speculations of the Hurâfs spread among them, while the Dîwûdân of Faîl Allah Hurûfî in its Persian reduction, and the Turkish exposition of the doctrines of the sect written by Ferîşte-oghlu under the title 'Aşkî namâs, have canonical authority with them. Furthermore they believe in the migration of souls.

The Christian elements may already partly have belonged to the Anatolian predecessors of the Bektâshîs; other parts were perhaps taken over from Christian groups in the region. The occasions of the reception of new members there is a distribution of wine, bread and cheese, which is probably a survival of the Holy Communion as practised by the Arctoyrites. Moreover the Bektâshîs make a confession of sins before their spiritual chiefs, who grant them absolution. Women take part in their rites without veiling their faces. A narrower group vow themselves to celibacy, the celibates wearing earrings as a distinctive mark. It is not yet made clear whether celibacy existed already in early times among the Bektâshîs; probably it was introduced for the first time by Bâllin Sultan.

The Bektâshîs not seldom settled in famous places of pilgrimage, explaining the sanctity of the shrines or the holy places which are also the twelve-fluted tasîlm taşhi, which is in Tirana; according to certain documents, there were still 30,000 Bektashis in Turkey in 1952 (cf. C.O.C., 1952, 206).

The celibates have their own grand master or dede. The head of one single monastery (tekke) is called baba; the fully initiated member derwâsh, the member who has only taken the first vow musâhib, the not yet governed adherent eşâsh. The discipline is chiefly governed by the relation of the muğrûd to his disciples and novices.

The Bektâshîs wear a white cap, consisting of four or twelve folds. The number four symbolises the "four gates": şahrî, tarîba, ma'dîra, hakîka, and the four corresponding classes of people: şubûd, şâhid, derwâsh, musâhib; the number twelve points to the number of the imams. Particularly characteristic are also the twelve-fluted tasîlîî taşhi, which is worn round the neck, and the teber (double-axe). Illustrations are to be found in the work of J. K. Birge (see bibliography).

The big tekkes comprise the following parts maydam evi, the monastery proper with the oratory, ask evi, the bakehouse and the women's quarters, ahk evi, the kitchens, mihamd evi, the guest quarters.

Among the many earlier settlements of the order the following should be mentioned. In Rumelia: Dimetoka and Kalkandelen; in Anatolia: 'Olmândîjîk north-west of Amasya and Elmalı in Lycia; near Cairo first at Kâşr al-'Ayn and soon afterwards also on the Muşåam slope (already as early as the 9th/15th century); there are others in Bağhdad and at Karbalâ?.

The Bektâshî form of the dervish religion deeply influenced the pious attitude of the Turkish people. Next to the mystical writings proper of the order there flourished also a rich and fervent lyric poetry of Bektâshî poets.

The order's political importance was due to its connexion with the Janissaries; the latter had been from the beginning, in the same way as all other early political institutions of the Ottomans, under the influence of religious corporations. In the second half of the 9th/15th century at the latest the Bektâshîs acquired exclusive authority amongst them. The receptivity of the Janissaries to Bektâshî beliefs may perhaps be explained by their Christian origin. Their connexion with this strictly organised order gave the Janissary corps the character of a closed corporation. The Bektâshîs also took part in several dervish rebellions against the Ottoman power, e.g., the revolt of Kalender-oghlu (933/1526-1527). The destruction of the Janissaries in 1241/1826 by Mahmûd II affected also the order to which they were linked; many monasteries were destroyed at the time. Towards the middle of the 19th century began the renewal of the order and the rebuilding of the monasteries; the Bektâshîs experienced a revival which found expression in its literary activity at the end of the 19th century and even after 1908.

In the autumn of 1925 the Bektâshîs, like all dervish orders in Turkey, were dissolved; it was, however, precisely the Bektâshîs who had opened the way for many measures inaugurated by the Turkish republic (relation to Islamic orthodoxy; position of women). To-day the Bektâshîs continue their existence in the Balkan peninsula, particularly in Albania where their chief monastery is in Tirana; according to certain documents, there were still 30,000 Bektashis in Turkey in 1952 (cf. C.O.C., 1952, 206).

**Bélén [see Belén].**

**Béleyn.** The name of a tribe-group of herdsmen and cultivators in the southern part of the Keren province of Eritrea. Known to themselves as Bogos, and numbering some 30,000 souls, they are organised in two main tribes, the Bayt Tarké and Bayt Tawké, strictly similar in culture and habit, though claiming distinct (mainly mythical) origins. A characteristic master-and-serf relationship has long been traditional in their tribal and folk-lore, indicate that their presence in Eritrea is due to the immigration of little-diluted Agau elements from northern Ethiopia in the 10th and 11th (16th and 17th) centuries into territory previously occupied by folk of lower culture and energy.

**Belgrade** (in modern Serbian: Beograd = White City), capital of the Federal People's Republic of Yugoslavia and of the People's Republic of Serbia, at the confluence of the Sava and the Danube. It comprises Belgrad, the old town on the right bank of the Sava and the Danube, Novi Beograd (= New Belgrade), a new settlement still under construction, on the left bank of the Sava, and Zemun, the old town on the Danube. A number of smaller places on both banks of the Sava and the Danube also belong to Belgrade. It has more than 500,000 inhabitants.

Since Belgrade became the capital of Yugoslavia in 1918, it has begun to spread to the far side of the Sava and the Danube. In former times it covered only the area along the right bank of the Sava and the right bank of the Danube below the confluence. It was here that the Celtic Scordici founded a settlement and named it Singidunum, a name which the town retained in the days of Roman rule (Singidunum). During the Bulgar rule in the 9th century, the town received its Slavonic name, which it retained, despite frequent changes of rulers (including Byzantine and, later, Hungarian ones). It was, however, frequently translated (Alba Bulgarica, Nándor Alba, Nándor Fejérvár, Alba Graeca, Griechisch Weissenburg). In their day, the Turks referred to it as Belgrad (Belgrade).

In order to distinguish it from other towns in Albania, Hungary, and Transylvania which also bore the name of Belgrade, the Turkish occupation called it Belgrad Ungürüs (in the 9th/10th century), Ashaghl Belgrad, Tuna Belgrad, Belgrad-i Semendire, or similar names. In some Turkish documents, and in contemporary geographical and historical works, Belgrade is sometimes designated by names applied in the Islamic world to border towns and strategically important fortresses. Thus the name dâr al-dhiyâdî is found frequently, and this has led some of the earlier Serbian historians to state that this was the Turkish name for Belgrade. Prof. F. Bajraktareviç has proved that such a statement is unfounded.

Up to the First World War, Belgrade was an important fortress on the road from Central Europe to the Near East. Thanks to its strategic importance, Belgrade has had a stormy past. After it had changed rulers frequently in the Middle Ages (Byzantines, Bulgars, Hungarians, and Serbs), Belgrade was ceded to the Hungarians after the death of the Serbian despot Stevan Lazarevíc (1427). For nearly a century, it was the most important base for the defence of the southern borders of Hungary against Turkish raids.

If we disregard some uncertain reports concerning a siege of Belgrade by Bâyezîd I, the Turks twice attacked Belgrade prior to 863/1459: in 843/1440, when the town resisted a six months' siege, and under Mehemmed II the Conqueror, who in 860/1456, arrived with a great army, a fleet, and strong artillery. Encircled on the landward side, with the Turkish fleet blocking the Danube, and heavily bombarded, Belgrade none the less held out. Assistance reached the town, and under the leadership of János Hunyady, who took over the defence after the break-through, the garrison of Belgrade resisted successfully, despite the fact that the Turks had penetrated into the lower fortress. After a premature assault, the Turks gave up the siege on July 23rd. This was the second occasion on which Belgrade won fame as "The outer wall of Christendom." In 845/1441-2, the Turks built a fortress opposite Belgrade, on the mountain Avala (Havala). This fortress played an important part in the Turkish raids on Belgrade after Serbia finally fell under Turkish rule (863/1459). The defensive power of Belgrade decreased during the first decades of the 10th/11th century in the clashes with the Turks. Broken by financial and political crises, Hungary was not able to give regular pay to the garrison; still less could it improve its defences.

During Sultan Sulayman's first campaign (927/1521), the Turkish army entered Belgrade on 29 August 1521, after a long siege. The Hungarian troops were sent home, the Serbian population was settled in Constantinople, and some of the Serbian crews of the warships in the Danube became sailors in Turkish service. At that time, the seat of the sandja of Smederevo (Semendire) was moved to Belgrade, and Bali-bey (died 933/1527) the son of Vahyá Pasha, was made governor. In order to make Belgrade secure, Bali Bey destroyed all settlements in the neighbouring areas of Syria, and he used the building materials of these destroyed Syrian towns for Belgrade's new fortifications.
which now became the most important fortifications against Hungary. After the battle near Mohács (932/1526) the towns in eastern and central Syria came under the rule of the sandjak-beg in Belgrade. After Bali Bey's death, his brother Mehmed-Bey (who died in 955/1548 as Paşa of Buda) continued the policy of conquest. Until 944/1538, the conquered regions of Syria, Slavonia, and southern Hungary remained under the rule of the sandjak-beg in Belgrade. After that, the sandjak of Pozega was founded in Slavonia. After the conquest of Buda (948/1541), and the foundation of the eyalet of Buda, the sandjak of Smederevo, with its seat in Belgrade, fell to this eyalet. The representative (kâsim-mahâkim) of the Paşa of Buda resided in Belgrade, as this town had lost none of its great military importance as a marshalling-place for Turkish troops before their wars against the west, even after the conquest of Buda. Together with the Turkish armies, sultans and Grand Viziers passed through Belgrade and paused there for varying periods. There are many events in Turkish history connected with Belgrade. Diplomatic missions, too, which came down the Danube from the west on their way to the Turkish Sultan, stayed in Belgrade for a short time, for this is where the overland route began.

Immediately after the conquest of Belgrade, the Turks began to consider the fortifications there. As during the Hungarian rule, these consisted of the lower and the upper fortress, which were now, however, well equipped with artillery. Each of these two fortresses had its own commander (düdâr). The Turks equipped Belgrade with a garrison and a fleet. The fleet on the Danube was particularly necessary because of the wars with Hungary, and in the first half of the 16th century, Serbian-Martolos were stationed there (in 943/1536-7 there were 385 Martolos in 40 oda with 39 odabâşî, under the command of the vojvoda Vuk). In the second half of the 16th century, there was also a considerable garrison in Belgrade (in 1560 there were 223 müstâfaşî, 9 zikrêli, 41 topâşi with 5 bolişebâşî, 4 kumbârâşî, 101 azâb, 96 Martolos with one Ağâ and 8 odabâşî; the Martolos, with the exception of the Ağâ and one boliş of the topâşi, were Serbs).

Whilst Belgrade, on one the one hand, developed quickly as a fortress after coming under Turkish rule, the same could not be said for its economic and commercial recovery. In 943/1536-7, there were in Belgrade 4 Muslim mahâalles with 79 households around four mosques. Nearly half of the non-military Muslim population was registered as craftsmen. There were 68 Christian households in the 12 mahâalles of the town. These inhabitants did not have to pay taxes, but their duty was to maintain the fortress. At that time there were 72 households of settled âfâlak (here used for semi-nomadic herdsmen, and not to be taken in the ethnical sense) in Belgrade, and not to be taken in the ethnical sense) in Belgrade, who guarded the imperial powder magazines, and there were 20 households of gypsies, whose duty it was to repair the ships in the harbour. In the thirties of the 16th century, a colony of Dubrovnik merchants from Smederevo settled in Belgrade.

After the middle of the 16th century, Belgrade took on the character of an oriental town. The Muslim population was recruited in three ways: from the arrival of the whole administrative machinery and the military garrison, from the settling of merchants and craftsmen from other parts of Turkey and from the islamisation of the local population. After Buda (948/1541) and Temesvar (950/1552) came under Turkish rule, Belgrade became very important as an entrepôt. By 967/1560, there were already 16 Muslim mahâalles with more than 350 households, and more than 60 Christian households in Belgrade. Craftsmanship developed considerably, and new, more delicate crafts appeared. Details from the Defter of 980/1572-3 bear witness to the rapid rise of Belgrade. At that date, there were over 200 Christian households, and over 500 Muslim (in 21 mahâalles), 133 gypsy, and 20 Jewish.

The end of the 16th/17th century, and the first half of the 17th century in particular, were times of great prosperity for Belgrade. According to a statement made by a Papal visitor to the archbishop of Bar, Peter Masarechi, Belgrade had 8,000 households with some 60,000 inhabitants (in 1632). According to Ewliya Čelebi, there were 38 Muslim mahâalles, and 11 others (Serbs, Greeks, Gypsies, Armenians and Jews), and 98,000 permanent residents in the year 1070/1660. The town had a large garrison and was the seat of the commander (hâfudân) of the Danube fleet. There were large storehouses for food for military purposes, workshops for the repair of cannons and nearby a powder factory. According to Ewliya Čelebi, Belgrade had 277 mihrâbî (Kâthî Čelebi mentions only up to 100 mosques there). The mosques of Sultan Sulaymân in the fortress (according to the title of Vezir. Northern Serbia began to be neglected and sank to a mere border garrison for janissaries. It became the seat of a Paşa with the title of Veizir. Northern Serbia began to be referred to as the Belgrade paşâlik, although it was still called the Smederevo sandjak or (Semendire sandjak) in official documents. From 1789 to 1794, Belgrade was once again under Austrian rule. By
the end of the 18th century, it had about 25,000 inhabitants.

After the Peace of Svishtov (1791), the janissaries were driven from Belgrade, though Sultan Selim III had to agree to their return not long afterwards. The rule of terror which they introduced gave rise to the first Serbian revolt in 1804; the rebels surrounded Belgrade immediately, but only succeeded in taking it towards the end of 1806. Belgrade remained the capital until the collapse of the rebel Serbian state in 1813. After the outbreak of the second Serbian revolt (1815) and the Turkish compromise to which it led, established dual rule in Serbia, Turkish authorities and garrison remained in Belgrade. As the vassal state of Serbia grew stronger, Belgrade, too, began to change more and more into a Serbian town. After a bloody clash there between Serbs and Turks, the Turkish garrison bombarded the town (1862). This was followed by lengthy diplomatic negotiations. In 1867, fortified towns were handed over to Serbia, and Belgrade then became the capital of Serbia.

Only a few buildings of the earlier periods were preserved in Belgrade, and similarly there are but few monuments of the Turkish rule left. A few of them are in the older fortress (now a park). In the town itself there are only two, a mosque and a tiwbe. More obvious traces of Turkish rule can be found in the names of parts of the town and of places in the neighbourhood, such as Kalemegdan (halis meydani), Karaburma, Tašmajdan (taš ma’demi), Dorcol (dorf yol), Rospicuprija (rospi köprüsü), Topcider (topçu dere’si), Avala (havale) etc.

Muslims living in Belgrade at the present time are not the descendants of the earlier Muslim population of Turkish times. The last Muslim families of old Belgrade emigrated in 1867 (many of these settled in northern Bosnia) The Muslim population found in Belgrade to day came after 1918, the rule of terror which they introduced gave rise to the first Serbian revolt in 1804; the rebels surround Belgrade, though Sultan Selim III had to agree to their return not long afterwards. Belgrade — Benares was captured by Muḥammad b. Sam. in 590/1193, and many of the idols decorating the small Bursa mosque. He also served as a minor government official in various departments in that town, except for a short appointment in a Tokat court. He died in 1142/1729 in Bursa where he is buried. According to Şafâî’s Tedhikire, Beligh composed a dinâdî which has so far not come down to us. His known poetical works consist of a number of poems quoted in various contemporary medjmu’as and tedhikires and two medjmu’as, i.e., Serguzesht-ndme, which relates his journey to Tokat and his adventures there, with vivid descriptions of his colleagues in court and the provincial town, and a Şehrensiz which is a description of the beauties of Bursa. Beligh’s most important work is his well known book of biographies, Güldeste-i riyaḍ-i ’r-fāl we wafyâ-i dânehwerîn-i nüshêdana. The Güldeste consists of five parts and deals with the biographies of Ottoman sultans, princes, wârîs and notables of Bursa such as poets, scholars, musicians, physicians, story-tellers, etc. (printed in Bursa 1302/1885). Beligh also wrote a supplement to Kâf-zade Fâhîd’s Tedhikire, Zübâdet al-ashâr, and called it Nuhbâat al-Âkhir lî pâyâl Zübâdet al-Âshâr. It covers the period between 1020 to 1726 (autograph MS, Unive 1182). Two works, both in verse, have not come down to us: Gülî-i Şadberk, a commentary of 100 hadîths, and Seba’i Seyyâr, a collection of seven tawhîds.

Bibliography: Şafâî, Tedhikire, s.v.; Faṭîn, Tedhikire, 28; Gibb, Ottoman Poetry, iv, 117; Sadeddin Nüzhet Ergun, Türk Şairleri, Istanbul 1936, ii, 809-817; IA, s.v. (by F. A. Tansal). (Fahir Iez)

Benigh, Mehmed Emin of Yenisehir, Turkish poet. Little is known of his life. He belonged to the ‘ulama? and served as hâdî in various Balkan towns. He does not seem to have been appreciated by his contemporaries as most biographers do not mention his name. He died in 1174/1760 in Eski Zaghra after a hard life, according to his writings. His small dinâdî was printed in Istanbul in 1258/1842. His hadîths are of mediocre quality. Some of his ghâsals show a certain power of description, but his most original work is his four poems in tardi’dhîn form: Keifgerémne, Hammadnâme, Berhernéme, Khayyândnâme, written in a fluent and unadorned style, which contain vivid descriptions of craftsmen and their trades.

Bibliography: Râmi, Tedhikire, s.v.; Faṭîn, Tedhikire, 28; Gibb, Ottoman Poetry, iv, 117-133; IA, s.v. (by F. A. Tansal); Sadeddin Nüzhet Ergun, Türk Şairleri, Istanbul 1936, ii, 817-820. (Fahir Iez)

Benares (or Banâras), also known as Kâshî, derives its name from two tiny monsoon streams, Varûna and Assî, that flow through the northern and southern parts of the town. Situated on the left bank of the Ganges, this ancient city, said to have been founded by Kâshîyâ, son of Subhôtîrâ, about 1200 B.C., is a centre of the Hindu faith and is also revered by the Buddhists. Pop. (1951) 341,811.

Benares was captured by Muḥizz al-Dîn Muḥammad b. Sâm in 590/1193, and many of the idols decorating its numerous temples were destroyed and the town reduced to ruins. In 757/1356 Firûz Şâh Tughluk, while on his return journey from Bengal, gave battle to the ruler of Benares and forced him into submission. In 797/1394 the town and the pargana were bestowed by Muḥammad b. Tughluk.
BENARES — BENDER

on his minister Ḥṣāḏa Ḥaḥān. It was captured by Bābur in 936/1529. During the reign of Akbar, Rādža Ḍjay Singh Sawāʾī built many a temple and an observatory here, the latter is now in ruins. Shāhdjahan appointed his eldest son, Dār̤ Shukoh, as the governor of the town when he came into close contact with Brahmans and imbibed Hindu learning. Awrangzīb, enraged at Muslim students also being taught by Brahmans, ordered the closure of its madrasas. He also built a mosque on the site of an ancient Hindu temple which he destroyed on the plea that it was being used as a seat of conspiracy. The name of the city was also changed to Muhammadābād but it never gained popularity, although it appears on his coins struck here. Muhammad Shāh "Rangālī" (1132/1720-1162/1748) bestowed the pargana of Benares on Manṣārām, a Rādāpūt zamindār, whose son Balwant Singh sided with the British during the Battle of Buxar, (1764) when he became independent of the Nawāb of Awadh. It was ceded to the British in 1765. In 1950 the estate was merged into the Indian Union forming part of the Banaras Division (Uttar Pradesh).

Kabhī, the Indian sūfī-poet, came of a weaver family of this place. All Ḥazīn, the Persian poet, lies buried here. It is also the birth-place of Agha A1I Hazīn, the Persian poet, whose son Balwant Mānsārām, a Radjput zamindār, gained popularity, although it appears on his coins.

Shahdadhajan appointed his eldest son, Dara Shukoh, whose son Balwant Mānsārām, a Radjput zamindār, was under an emin [q.v.]. Ewliya Celebi reported that its "varosh" lying on the west and the morning at Benares, like the evening at Lucknow, has become proverbial in Urdu literature.

BENAVENT, (in al-Ibrīsī b.m.b.m.t.), Benevento, never captured by the Muslims, even for a short period as were Bari and Taranto. However, in the 3rd/9th and 4th/10th centuries the Muslims became involved in the history of the town and the principality of Benevento, having frequently been both enemies and allies of its princes in their domestic struggles, as well as often plundering and threatening its territory. The period on which we are best informed, thanks to the Latin sources, is the middle portion of the 3rd/9th century (the Arab sources are silent in this regard or give only very vague information). We know that in 228/843 a Saracen amīr Apoalaffar or Apoiaffar (Abū Ḥanīfār), who had come from Taranto, became the ally of prince Siconulph against his rival Radelchis, but eventually quarrelled with Siconulph and was killed defending Benevento. In 237/851 we find a certain Massar (Abū Maʾṣḥar), with a troop of Saracens, allied to this same Radelchis. Massar was later treacherously seized by Radelchis and executed together with his family. Some years after this Benevento was again threatened by Sawdān, the enir of Bari. It was only during the 4th/10th century that the Muslim danger receded, to disappear in the 5th/11th century with the Norman conquest of Sicily. According to the testimony of al-Ibrīsī the town of Benevento is very old (azalīyya), and its population large.

(F. GABRIELI)

BENAVERT, a Muslim leader who inspired Arab resistance to the Normans in eastern Sicily from 464/1072 until 479/1086. His name figures as Benaventi or Benavent in the account of the historian of the Normans, Malaterra. This person, of whom the Muslim sources make no mention, defeated the son of Count Roger in 467/1075 near Catania, captured this town in 474/1081, and in 478/1085 led expeditions from it into Calabria. In the following year he was besieged by Roger in Syracuse, and made a supreme effort to free this stronghold, which seems to have been the centre of his power. He was killed in the ensuing naval battle in the port, on 8 Šafār 479/25 May 1086. The real Arab name of this champion of Islam in Sicily was Ibn Abīḍ̣āb. His memory has been handed down only by his enemies, who admired his courage. Almost certainly he was a forbear of the Muhammad b. Abīḍ̣āb who a century and a half later led the last great revolt of the Sicilian Muslims against Frederick II, by whom he was put to death.

(F. GABRIELI)

BENDER, a town in Bessarabia; the name appears on a coin of Mengli Gerey dated 905/1499-1500. It is found in the Tatar documents as Bender Kerman (V. Zernov, Materiali, 16). Bender, from Persian Bandar, was called earhly your bandar, which may have a Kuman origin. That the town was first established by the Genoese is a legend (Chronique d’Ureche, ed. Giurescu). Its rise as a trading town with important customs revenue was due to its being on the “Tatar-route” on which an active trade was carried on between Lvov and the Crimea and Ak Kirmān [q.v.] in the 14th century. The place seems to pass from under the rule of the Tatars to that of the Moldavian princes around 1400. The Tatars tried to reconquer it (Ulugh Muhammad in 1428 and Iminek Mirzā in 1476), and, finally Mengli Gerey in cooperation with the Ottomans took it with Kavşan and Tambasar in 1484. When in 945/1538 Süleyman II invaded Moldavia and formed the new sândjak of Ak Kirmān with the incorporation of the south Bessarabia he ordered the erection of a strong castle on the new border at Bender. A good description of the castle was given by Ewliya Celebi (v, 116-120) in 1067/1656-57. It became the seat of a sândjak-begi toward 1570 and later it was attached to the newly formed eydlet of Özü. The kâşi of Bender had 40 nābīye [q.v.] under his jurisdiction and the customs house, always active, was under an ēmin [q.v.]. Ewliya Celebi reported that its “warōgh” lying on the west and

(F. GABRIELI)
the south of the castle consisted of 7 Muslim and 7 non-Muslim districts with 1700 houses and about 200 shops. Bender was, Ethylja adds, "the key of the empire" in the north, a stronghold especially against the Cossacks of Dnieper.

Bender was also famous as the refuge of Charles XII of Sweden between 3 August 1709 and 17 February 1713 and of Potocki in 1768. The Russians captured it first on 27 September 1770, in 1789 and on 8 November 1806 keeping it only with the treaty of Bucharest, 28 May 1812.

BENGAL [see bangala].

BENGALI.

(i) Muslim Bengali Language.

Bengali belongs to the Indo-European family of languages. It may have begun to evolve as a separate language with a distinct identity, out of Gaur languages. It may have begun to evolve as a separate language about three hundred years before Muslim rule in Bengal and flourished as a regional literature a century and a half after the Muslim conquest. But it did not exist either as a language or as a literature before Bengal came in contact with Islam and the

Persian contributed as many as 2,500 words to Bengali vocabulary in general, and nearly another 2,000 words to the vocabulary of the Muslims inhabiting the south-eastern part of East Pakistan in particular. In addition, Persian suffixes like i, dâin, dâini, dâr, khâwur, bâdî, giri, are used to form Bengali adjectives, abstract nouns etc., e.g., desh + i = deshi (country-made), phul + dâini = phuldâini (flower-vase), dokhân + dâr = dokhândar (shopkeeper), guli + khâwur = gulhâkhor (drunkard) mamlâ + bîd = memlâyâbîdî (litigant), bâb + giri = bâbégiri (interested in fashion), etc. Persian words like nar and mūdā denote gender in Bengali, e.g., pîrâ (pigeon), narpârâ (male pigeon), mūdâ pîrâ (female pigeon). Similarly mardâ and mūdâ before a Bengali word of common gender denote the male and the female of the species respectively, e.g., mardâ kûkur (dog), mūdâ kûkur (bitch).

Arab merchants developed commercial relations with the people of the south-eastern coastal regions of Bengal long before the political conquest of the country by the Muslims. The Muslim conquest in later times strengthened the religious and cultural ties of the people of this area with the Islamic way of life, and resulted in an increase in the numbers of the Muslim population. It left its mark on the pronunciation of words in this part of Bengal. For example, in the districts of Noakhali, Cittagong and Sylien the use of the Arabic voiceless velar fricative kh ≤ in place of the Bengali plosive k and k̆ of the same category, e.g., khâbâr ≤ kâbâr (cloth), khâs ≤ khâs (I eat), etc., and the Arabic voiced alveolar fricative z ≤ in place of the Bengali voiced plosive-like affricate dj of the standard Bengali dialect, e.g., sāi ≤ djāi (I go), sānd ≤ djâns (to know) etc.

Since the handing over of power in 1947 there has been in East Pakistan a growing tendency to absorb words of Perso-Arabic origin in large numbers through Urdu, as a result of cultural and political contact with West Pakistan.

(ii) Muslim Bengali literature.

Formative Period (900-1200 A.D.). Bengali sprang up as a distinct branch of the Indo-Aryan language about three hundred years before Muslim rule in Bengal and flourished as a regional literature a century and a half after the Muslim conquest. But it did not exist either as a language or as a literature before Bengali came in contact with Islam and the
Muslims. Archaeological excavations at Paharpur (Rajshahi) and at Mainamati (Tripura), which led to the discovery of a few Abbasid coins of the period from the 8th to the 13th centuries, and the history of Muslim saints like Bayazid Bistami (d. 874) at Madanpur Mymensingh, Baba Ahmad (1119) at Vikrampura, Dacca, prove that there was constant maritime and missionary communication between the Muslim world and Bengal while the Bengali language was being formed.

Turki Period (1200-1350 A.D.). The Turks conquered Bengal in 1202 and took 150 years to establish their administration all over the country. This was the period of creation of an Islamic atmosphere through administrative, religious and social machinery. Sanskrit, the fountainhead of Hindu culture, fell into desuetude; Persian, the official and cultural language of the Muslims, came into prominence; and Bengali, the language of the masses, developed rapidly. Shek Sabhadaya, a Sanskrit hagiography on Shaykh Djalal al-Din Tabrizi (d. 1225), and Niranjaner Ruskami, a Bengali ballad by Ramai Pandit, contain sufficient materials indicative of the growing Islamic atmosphere in Bengal.

Period of Independence (1351-1575 A.D.). Bengal became independent under Sultan Ilyas Shah (1342-1357) and preserved her independence for 225 years. The Sultans of Pandua and Gaud identified themselves with the people and extended their patronage liberally to Bengali literature irrespective of caste and creed. The Bhagavata, Ramayana and Mahabharaata were translated into Bengali under their direct patronage; the great poets Vidyapati and Candidas flourished; and Muslims, participating with their Hindu neighbours, opened up new avenues of literary themes primarily derived from Perso-Arabic culture.

The first attempt at popularising Bengali among Muslim scholars was perhaps made by the saint-poet Nuru Kuthi-i 'Alam (d. 1416) of Pandua, who introduced the 'Rikhia Style' in Bengali, in which half the hemistich was composed in pure Persian and the other half in unmixed Bengali. The saint was a classmate of Chyakh al-Din A'ram Shihab (1398-1410) and a life-long friend of the Sultan, under whose patronage Vidyapati of Mithilakhand and Muhammad Saqir of Bengal, the author of the first Bengali romance Yusuf-Zulaykha, flourished. Other writers of romances, like Bahram Khan with his Layli-Madamin, Sahir Khan with his Rumi-Kaydarfiri, Donaghazi with his Sayyid al-Mulk and Muhammad Kabir with his Madhumadhati (1651), followed Saqir in quick succession.

Historical tales too were introduced in Bengali by a few poets. Zayn al-Din wrote Rasul Vijay on the exploits of the Prophet, under the patronage of Yusuf Shihab (1478-1481), who also helped Malaghur Basu to compose Shikshiksha Vijay. Sahir Khan also wrote a Rasul Vijay, while Shyakh Fayd Allah (1545-1575) composed Gasidi Vijay and Goraksha Vijay.

The earliest Muslim poet introducing Islamic precepts in Bengali literature, was 'Ali. His book of admonition, Nasikal-nama, was written on the tenets of Islam. He was also a composer of songs, in one of which he mentions the name of Firuz Shihab (1532-1533). Positive literary evidence on the fusion of Hindu and Muslim culture is found in Shyakh Fayd Allah's Saptapiri (1575). He described in it the beliefs and practices of a new cult aiming at a common platform of worship for Hindus and Muslims alike. Cauda Kaidi and Shyakh Kabir, two composers of songs on the common ideals of Sufis and Vaishnavs, flourished during the time of Husayn Shihab (1493-1519) and his son Nusrat Shihab (1519-1531).

Mughal Period (1576-1757 A.D.). Bengal came under the Mughals in 1576, to whom the country was a 'hell full of the bounty of heavens'. They introduced their own culture with more stress on Persian and neglected the provincial literature. Notwithstanding this, Hindu literature developed on the themes of Candl, Manas, Dharma, Anand and Gangad; Vaishnav literature reached its climax and Muslim Bengali literature, deeply influenced by Indo-Persian literature, flourished as never before.

Among Muslim literary figures, two major poets deserve special mention, namely, Sayyid Sultan (1550-1648) and Aliwal (1607-1680). The former was the saint-poet of Cittagong; Nabi Vamgga, his magnum opus, rivalled the Bengali Ramayana and Mahabharat in all respects; the latter, who was a scholar-poet of the Arakanese Court, adopted the theme of Padmavati (1651), from Hindi. Both of them exerted a wide and abiding influence on successive generations of poets, who not only improved upon the old themes, but also discovered new ones.

In the field of religion, the Nasihat-nama of Shyakh Farid (1550-1615) and Kitab al-Muwallid of Muttalib (1575-1600) are outstanding. Nasr Allah Khan (1560-1625), a prolific writer on religious subjects, wrote the Shari'at-nama, Masar Sawali and Hidayat al-Islam. The Bayyinaat of Nawazish Khan (1638), Hasar Mas'udil of 'Abd al-Karim (1698), Nasihat-nama and Shikhd al-Din-nama of 'Abd al-Hakim (1620-1690), Sarsalr Niti of Kamar 'Ali (1675) also deserve notice.

In the realm of Muslim tales, the Nabi Vamgga, Rasul Vijay and Shabi Mirdad of Sayyid Sultan; Djang-nama of Nasr Allah Khan (1560-1625), Amir Hamza (1684) of Gulam Nabbi and Amriyat Vangi (1758) of Hayat Mahmud narrate many legends about the Prophet and his uncle Hamza. Sayyid Sultan's Iblis-nama, Muhammad Khan's Kiydmainama, Shyakh Parin's Nari-nama and Muhammad Shah's Naur Kandil were built up with the Muslim concepts of Satan, Doomsday and Cosmogony respectively.

Romances introduced earlier were developed by 'Abd al-Hakim in his Yusuf Zulaykha and Lai'mati Sayf al-Mulk, Nawazish Khan in his Gul-i Bahawali (1638), Ghurib Allah in his Yusuf Zulaykha and Muhammad Akbar in his Zeb al-Mulk (1673). When pure romances became monotonous, Sherbaz in his Fakhr-nama and Shyakh Sadiq in his Gadda Mulkaha (1712) introduced moral instruction in romances.

A good elegiac literature developed centring round the tragedy of Karbala. Muhammad Khan in his Maktal Husayn (1645), 'Abd al-Hakim in his Karbala, Hayat Mahmud in his Djang-nama (1723), and Muhammad Ya'kub in his Maktal Husayn (1654) contributed largely to the wide popularity of this theme.

British Period (1757-1947). The Hindus took advantage of Western education at least half a century before the Muslims, and revolutionised Bengali literature by the introduction of a new prose and a new poetry embodying Western ideas, thoughts and forms. Iswar Chandra Vidyasagar (1820-1891), Bankim Chandra Chatterji (1835-1894) and Madhu-
sudan Datta (1824-1873) played a great rôle in this literary regeneration.

The Muslims entered the field half a century later. Mr. Muhammad Husayn (1848-1931), Pandit Riyâd al-Din Mashhadi (1850-1919) Shaykh 'Abd al-Rahîm (1859-1911), Kaykobâd (1858-1951), Muzammil Hâkî (1860-1933) and Dr. Abu 'l-Husayn (1860-1916) took to this new Bengal to lay the foundation of modern Muslim Bengal literature and a host of others came in their wake. Among them Ismâ'il Husayn Shîrâzî (1870-1931) was the most illustrious.

Meanwhile, Rabindranâth Tagore (1860-1941), the Rebel Poet of modern Bengal, ushered in a new school of realistic poetry full of life, light and vigour. He shared the sorrows and sufferings of his countrymen in particular and of oppressed humanity in general. He was the only singing bard to herald a new era of common men and women in search of independence of their motherland, a struggle which culminated later in the creation of Pakistan. In his wake, the poet Dâjîsm al-Dîn (b. 1902) came forward to sing the songs of rural Bengal, particularly of its east portion, now known as East Pakistan.

**BENGHÂZI,** the principal town of Cyrenaica, formerly the district of Barka [q.v.], situated on the western plain on a strip of shore partly cut off from dry land by lagoons. Its position is not advantageous, as seaward by lagoons. Its position is not advantageous, as there is no land, the hinterland is a strip of land about 63,000, all Muslims except for a very few Egyptians, Jews and Greeks, some of whom were tax-paying residents.

Benghazi suffered much from the bombing of late 1942, and from the departure of the Italian population, who evacuated it and the whole of Cyrenaica on the arrival of the British 8th Army. It became the capital and seat of the sovereign of the Federal Union of Libya (1951), and the principal town of Cyrenaica, but lost its industries and much of its importance as a port. The value of its airfield is primarily strategic. Its population in 1954 was about 63,000, all Muslims except for a very small number of Jews and Europeans.

**BENGHÂZI**, the principal town of Cyrenaica.

**BENGHÂZI,** the principal town of Cyrenaica, formerly the district of Barka [q.v.], situated on the western plain on a strip of shore partly cut off from dry land by lagoons. Its position is not advantageous, as its harbour is exposed to winds from the north and east, while the neighbouring regions are arid and the fertile districts on the al-Mârîdî and Djâbl Alghdâr plateaux are some way off. The town is built on the site of the former Euhesperides, a colony founded by the Greeks in the fifth century B.C. During the reign of the Egyptian Ptolemy III Euergetes the settlement became known by the name of his wife Berenike, and retained this name, as Bernik, in the Middle Ages. It was always a town of secondary importance, and declined in the Middle Ages, possibly vanishing completely.

The modern town dates from the immigration at the end of the 19th century of Tripolitians from Zliten and Mesrata who had commercial connexions with Teke, 859/1455) it was only 5 akka. In later times it was usually 9 for djâbl benndk and 12 for chînîlî benndk and when the chîf resmi system was extended to eastern Anatolia in 1540 the rate there was 18 for chînîlî and 12 or 13 for djâbl benndk.

**BENJAMIN** [see BINYÂMÎN].

**BENN nâk,** also called benndk in the 9th/15th century, an Ottoman "çâfi (çâfi)" tax paid by married peasants (muzawwâdî re'dîyâ) possessing a piece of land less than half a çâfi [q.v.] or no land, the former being called chînîlî benndk or simply benndk and the latter djâbl benndk or djâbl. The word benndk might possibly be derived from the Arabic verb benâka.

Actually the benndk resmi made part of the çâfi resmi [q.v.] system and can be considered originally as consisting of two or three of the seven services (sullûk, khidmat) included in the çâfi resmi. The rate of benndk was 6 or 9 akka in Mehemmed II's basânamâme [q.v.], but in some areas (Teke, 859/1455) it was only 5 akka. In later times it was usually 9 for djâbl benndk and 12 for chînîlî benndk and when the çâfi resmi system was extended to eastern Anatolia in 1540 the rate there was 18 for chînîlî and 12 or 13 for djâbl benndk.

In principle benndk resmi was paid by the Muslim peasants directly to the timâr-holders for whom they were recorded as ra'îyyât in the defter [q.v.]. In the defters the term benndk shows the peasants themselves paying benndk resmi. If a bachelor was married he was immediately subject to this tax. If later divorced he paid only the bachelor tax (mudjfer-red resmi). If married, the nomad re'dîyâ without stock animals paid also benndk. Thus this tax was considered essentially as a poll-tax and called also ra'îyyât resmi.

BERÄR, formerly a province of British India consisting of the four districts of Amraoti, Akola, Buldana, and Yeotmal; area: 17,809 sq.m.; population: 3,604,866 of whom 335,169 were Muslims (1941 Census). Under British rule it was administrated as part of the Central Provinces. It has recently been incorporated in the Bombay State.

The territories of the Vakataka, contemporaries of the Guptas, roughly corresponded to modern Berär. It was first invaded by Muslims in 1294 but was not permanently occupied until 1318. It formed the northernmost province (taraq) of the Bahmani kingdom of the Dakhan but towards the end of the 9th/10th century became an independent sultanate under the ‘Imad Shâhs until annexed by the Nizâm Shâhs of Ahmadnagar in 1574. It was conquered by Akbar towards the end of his reign and remained a salât of the Mughal empire until 1724 when Asaf Djiâh Nizâm al-Mulk became independent in Haydârabâb. Until the defeat of the Marâthас by Arthur Wellesley at Assaye in 1803 it was frequently overrun by Marâthâ forces [see NAGPUR]. In 1804 the Berär territories ceded by the Bhonsla Raja of Nagpur were handed over to the Nizâm. During the governor-generalship of Lord Hastings, Berär was for a time controlled by the banking firm of Palmer and Company (vide Preliminary Report on the Russell Correspondence relating to Hyderabad, C. Collin Davies, The Indian Archives, vol. viii, no. i, 1954 ff.). In 1853 Berär was assigned to the East India Company and its revenues were partly employed in the payment of the Nizâm’s debts and partly in maintaining the Haydârabâb Contingent. By a fresh agreement in 1902 Lord Curzon reaffirmed the rights of the Nizâm over Berär but the province was leased in perpetuity to the Government of India at an annual rental of 25 lakhs of rupees. During the viceroyalty of Lord Reading a demand by the Nizâm for the restoration of Berär met with no success. Later under Lords Willingdon and Linlithgow a number of gestures were made to the Nizâm, but Berär continued to be administered as part of the Central Provinces until 1956.

BERÄT, A word of Arabic origin (for the Arabic meaning see BERÁRA which in Ottoman Turkish denotes a type of order issued by the Sultan. Several words of Turkish or other origin were used with the same meaning: the Turkish biti, yarîlîg, buyuruldu, the Arabic berät, emr, ículos, tevêkî, menshur, misbâh; in the Persian fermân, nîşâdan. Some of these words were used during the entire Ottoman epoch, others were used only during certain periods; some of them had only a general meaning, others had also a more special, limited meaning. In the same document several words could be used to designate the ‘sultan’s order’; they could denote an order in the wider sense and also in a narrower, more limited sense. Biti meaning a sultan’s order was not much used after 1500. Emr (amr), in use for 400 years, did not only mean a general order issued in the name of the sultan, but also a special order which decreed the issue of a berät; hence the expression in the preambles of the berät: âdi emrî ‘he who has the order concerning the issue of the berät in hand’. Nîşâdan (fethâm) always occurs in the sense of general order; but also meant a special type of order, the documents of which used to be separately dealt with by the administration and which, at present, are registered in the Turkish archives as a separate archival unity (akhâm defterleri). The nîşâdan meant all orders, without any restriction of subject, that were provided with the tuzhrah (nîşâdan), but (since the 10th/11th century) especially those which were drawn up by the highest financial department of the empire, the defterkhânâ, and were concerned with financial matters. Synonymous with the term nîşâdan was tevêkî (lawî) which could be used, without further limitation, to designate any document which was provided with the tevêkî. (Their identical meaning is proved by the derivatives of both words, the tevêkî-i nişâdan, which are synonymous). An order of more limited scope was provided with the more rarely used menshur, the misbâh and the sîvade (in use only since the 19th century). The berät had a more limited meaning, that of a “deed of grant”, “a writ for the appointment to hold an office”; the documents belonging to this group were also handled separately by the administration; the memory of this is preserved in the designation of some public records: rumdar berät defteri “the defter of the berâtis issued in matters concerning the Orthodox Greek Church”, katolik berät defteri etc. (Midhat Şertoğlu, Mukteva bâkimdan Bayzeeddî Arşivi, 29, 32).

As all grants in the Ottoman empire derived from the sultan, the berât was always issued in the sultan’s name and its constant attribute was: şerîf or humdâyûn (“imperial berât”).

In the Ottoman empire all appointments were made by “grants”, those which were paid by a temporary tenure of estates as well as those paid in ready money; thus all appointments to the civil service, whether that of a high-ranking pasha or that of a low-ranking employee of a mosque, were effected by a berât. The bishops of Syria also received their licences from the sultan in the form of a berât. E17, 678, s.v. Bard’a). Even the vassals of the empire, e.g., the princes of Transylvania, received their recognition in their principality in the form of a berât, with the difference that in the diploma issued to them the expression in question was complemented the following way: bu berât-i humdâyûn un ‘ahdâm-i sîvade menshûr verdüm” I have issued the imperial berât and the treaty full of faith”. Thus under the name of berât an exceedingly great number of orders were issued and these could be grouped according to their contents: şerîf berât, simdâr berât, mülkâname berât, illsâd berât, and, if issued for the benefit of a corporation, ojabâk berât etc.

The word berât became especially part of many of the expressions used in connexion with the administration of the simdâr-estates, e.g., berât-i illsâd-i simdâr teşhir berâtı “the instruction (or warrant) called téşhir given for issuing a high berât”, berât-i şerîfîm verdîm fermânîm olmâgân “since my imperial order has been given for issuing a high berât”, teşhirî oilmâgân “to exchange the written order called teşhirere for a berât”, teşhirî oilmâgân “as the sultan’s order has been issued for the renewal of the berât” (such procedure was usually ordered
after the sultan’s accession to the throne), eli berât “having a berât in hand” (corresponding to this expression is the above quoted eli emirât, eli-i berât “who has a berât”, and in official documents there is often reference to issued berâtis. The word berât, however, often does not occur in the deeds of grant and it has to be inferred from the contents of the document whether it is at the same time a berât or not.

According to the dimension of the grant, the berât has simpler or more elaborate variants, but the word berât “having a berât in hand” (corresponding to berâts) is always written in the same style and the tughra, however, often does not occur in the deeds of grant, and in Persian, it has not the same meaning as in Turkish (see also barât). The number who availed themselves of this offer was, however, very limited. Both terms and guilds fell into desuetude after the Tanzimat.

BERBER (Barbar): (1) Tribal territory. The name originally signified the territory of the Mirâfâb (Mayrâfâb), an Arabic-speaking tribe claiming kinship with the Dâlîyin. It extended on both banks of the Nile from the Fifth Cataract (lat. 18° 23' N.) to the river Aţâbara. The Mirâfâb included both riverain cultivators and semi-nomads. The ruler (makk) was a vassal of the Fundži sultan of Sinnâr. On the death of a makk, the sultan nominated his successor from the ruling family of Timsâb. He also levied, at intervals of four or five years, a tribute of gold, horses and camels. Burckhardt (1814) describes the southernmost portion of Mirâfâb territory as forming a small separate kingdom, known as Râ‘al-Wâlî, under a member of the Timsâb family. Berber was an important trading-centre. A route from Upper Egypt across the Nubian Desert here reached the Nile, and caravans going to...
Egypt from Sinnar and Shandl passed through Berber. The trade of Dongola found an outlet through Berber but by the early 19th century the Dongola-Berber route across the Bayuda Desert was dangerous and little used. Trade with Suakin and al-Taka (the region around modern Kasala) was slight owing to the predatory Bedja and Bisharim tribes. The transit dues levied on Egyptian caravans provided most of the makk’s revenues; the Mirafabi paid him no taxes on land or produce, although they provided the tribute levied by Sinnar. Caravans coming from the south paid no dues, although they made presents to the makk. The trading-connections of Berber resulted in the settlement of Danakil, ‘Ababda and other strangers. The ‘Ababda served as guides and protectors of caravans crossing the Nubian Desert. The last makk, Naṣr al-Dīn, is reported to have sought the assistance of Muhammad ‘Ali Pasha to regain his throne; certainly he welcomed the arrival of the Turco-Egyptian army on 5 March 1821.

(2) Province. During the Turco-Egyptian period the Mirafabi territory formed part of the province of Berber, which extended from Ḥadjar al-‘Asal (lat. 16° 24’ N.) northwards to Abū Ḥamad on the right bank and Kurdi on the left bank, and included the adjacent deserts and their nomads. The extension of Muhammad ‘Ali’s rule over the Begia, resulting in the opening of a permanent trade-route with Suakin, increased the prosperity of the provincial capital. The last khedivial governor was the ‘Abbādī notable, Husayn Pasha Khalīfa, who was endeavouring to repress Mahdist activities when Gordon arrived as governor-general in February 1884. Gordon’s attempts to establish friendly relations with the Mahdī and his indiscreet disclosure of the intended evacuation of the Sudan weakened resistance. In April 1884 the Mahdī commissioned Muhammad al-Khayr ‘Abd Allāh Khudjali to lead the djihād in Berber, and in May the provincial capital was taken, leaving Gordon isolated in Khartoum.

Mahdist Berber was administered by a military governor and had a provincial garrison and treasury. The decline of commerce irritated the inhabitants but a precarious trade continued with Upper Egypt and Suakin, the customs dues from which formed a source of provincial revenue. The last Mahdist governor, Muhammad al-Zakī ‘Uṯmān, after appealing in vain for help against the Anglo-Egyptian advance, evacuated the provincial capital which was occupied by Anglo-Egyptian forces in September 1897. After the reconquest, Berber was reconstituted within narrower boundaries than the pre-Mahdist province and was subsequently combined with Dongola and Halfa to form the present Northern Province.

(3) Town. Berber as the name of a town was apparently unknown before the Turco-Egyptian period. Bruce (1772) speaks of “Gooz” (i.e., Kūz al-Funqūl) as the capital of Berber. This place was much decayed at the time of Burckhardt’s visit (1814), when the capital was a more northerly village called by him “Ankheyre”. This may be an error for al-Mikhayrif, (“El Mekheyr” in Cailliaud), a name used for the provincial capital under the Turco-Egyptians. Al-Mikhayrif was abandoned after the Mahdist conquest and the modern town of Berber lies further north, on the site of the Mahdist camp. Since the Reconquest Berber has declined in importance. The provincial head-quarters was transferred in 1905 to al-Dāmir, while the modern railway-town of ‘Aṭbarā has superseded it as a centre of communications.

Berber, the port and former capital of the British Somaliland Protectorate, lying in 10°26’ North lat. and 45°02’ Long. The Periplus, Ptolemy, and Cosmas give the name βαβαπραξης ἑγγόρως or βαβαπραξία to the coast of the Land of Frankincense. The town itself may be Μαλκά ὑμηρόν. The older Arab geographers write of the land of Berberā, the Gulf of ‘Aden being Bahr Berber or al-Khalidj al-Berberī. The inhabitants are known as βαβαπραξοι, Berbera, or Berabīr. They are Somali [q.v.] and the people whom Yākūṭ (iv, 602) describes as barbarous negroes, amongst whom Islam had penetrated, living between the Zanj and the Ḥabash. Ibn Sa’d (died 1256) who seems to be first to mention the town of Berber, describes them as Muslims, and Ibn Battūta records that they are Shafi’ī which they are today. The name Soomalī first occurs in an Ethiopian hymn in the reign of the Negus Yeshāq (1414-29) and frequently in the Futuḥ al-Habashi (1540-50).

Berberā’s original site is Bandar ‘Abbās now a burial ground to the East of the present town. Amongst its tombs are those of three sayyids said to have been concerned with the foundation of Bandar ‘Abbās as other Arabian proselytisers founded Zayla’ and Makdish. Traditionally the town was contemporary with ‘Amūd and Aw Barre further to the West. It formed part of the Muslim state of Adal (sometimes based on Zayla’, [q.v.]) which, founded in the 9th/10th centuries, reached its zenith in the 14th century and rapidly declined after Imam Aḥmad Ibrāhīm al-Shāhz (1506-43)’s 16th century conquest of Abyssinia. While the Abyssinian armies were recovering their losses with Portuguese aid, Berberā was sacked in 1518 by Saldanha. In the 17th century, with Zayla’, it became a dependency of the sharīfs of Muḥāj. The first British-Soomalī treaty was signed in 1827, two years after the Mary Ann had been plundered off Berberā. With ‘Ali Sharmarke (Soomalī Habar Yānis), governor of Zayla’, Britain signed a treaty in 1845 to secure harbouring rights for vessels of the East India Company. He was British Agent at Berberā when Burton was attacked in 1855. Travellers in the 19th century describe Berberā as a poverty-stricken collection of huts with a population, in the hot months, of as little as 8,000. From October to March, however, during the north-east Monsoon, the port was open to vessels from Arabia, the Persian Gulf, and India, bringing imports of dates, cloth, rice, and metals etc., and exporting slaves, livestock, ghee and skins, and the town sometimes contained as many as 40,000 persons.

Berberā was occupied in 1875 by the Egyptians who withdrew nine years later during the Mahdist rebellion in the Sudan when Britain acquired Zayla’ and Berberā. Treaties were signed with the Gada-bursi (1884) and the Habar Awal (1884 and 1886) clans. In 1901 Sayyīḥ Muḥammad ‘Abdullā hai Ḥassān [q.v.], the ‘Mad Mullah’, of the Shāliḥiyah family began his djihād against the colonial powers. The administration of the interior was abandoned in 1908, and gradually resumed about 1912.
In Burton's time Berbera was dominated by the Habar Awal tribe who were still in 1912 receiving a subsidy of 10,000 Rs. annually. With a population today rarely less than 30,000, most of whom are Habar Awal, the town is the headquarters of Berbera District. It is the centre for the Protectorate of the Kadjiriyah (French: afarakeh) with a markam for Sayyid Abd Al-Kadir al-Dilani, and of the Somali Youth League nationalist party. A local Government Council was started in 1953, and the harbour is being developed.

BERBERI, name given to the eastern Hazāra inhabiting the mountainous region of central Afghanistan between Kābul and Harāt; in Iran, the region of Mašhad, Bālūcistān (near Quetta), and in the S.S.R. of Turkmenistān, the oasis of Kuşkha (district of Makī) [see haṣāra].

BERBERS, the name by which are commonly designated the populations, who, from the Egyptian frontier (Swā [q.v.]) to the shores of the Atlantic Ocean and the great bend of the Niger, speak—or used to speak before their arabisation—dialects (or rather local forms) of a single language, Berber. This term is probably an abusive or contemptuous epithet, used in Greek (Barbaroi) and in Latin (Barbāri) as well as in Arabic (Barbar, singular Barbar, pl. Barāber, Barābira), and does not constitute a national name, as some people (cf. P. H. Antichan, _La Tunisie_, 1884, 3) maintain (cf. the toponymics Berber in Nubia and Berbera in Somaliland; see G. S. Colin, _Appellations données par les Arabes aux peuples hétérogènes_, in GLECS, vii, 93-6). The term amāṣiḫ (and var.), pl. amāṣiḫ (and var.) may be considered as designating the Berbers in general, though they themselves, lacking as they do all sense of community, usually employ their tribal names when referring to themselves or have otherwise more or less willingly accepted foreign designations (Kabyles, Chauoua, etc.). The term amāṣiḫ has the meaning of "free man" (see however T. Sarnelli, _Sull'origine del nome imazigton/, in Memoriai André Basset, Paris 1957, 131-138) and is still employed over a fairly extensive area. The feminine tamāṣiḫt (tamāṣiḫt) (and var.) is used there to designate the Berber language.

The only general work on the Berbers is the small but excellent popular account by G. H. Bousquet, _Les Berbères_, Paris 1937.

I. — History

a) Origins

The language is at present the only criterion which will serve to distinguish the Berbers, who, from the anthropological point of view, reveal morphological characteristics which are too varied, indeed too irreconcilably opposed, to permit us to speak of a homogeneous Berber race, whilst, from the political point of view, they have always been too divided to constitute a truly distinct nation. In spite of the relative abundance of prehistoric remains discovered in the immense territory conveniently called "Barbary", in spite of the epigraphic documents and the works of Greek, Latin and Arab authors, a whole portion of the history of this obviously composite people is still unknown to us. It would be useless to deny that the origin of the Berber language—the unity of which, moreover, is a relative matter (see section V below)—remains a mystery for us and that to locate, therefore, the cradle of the men who speak it remains an impossible task. However, on this absorbing subject, bibliography is by no means lacking, and, many hypotheses, sometimes presented as certainties, have been put forward concerning the origins of the Berbers. Classical authors consider them about variously as autochthonous, oriental or Aegean. The Arabs usually consider them as orientals, Canaanites or Himyariotes, and this latter hypothesis has recently been supported by cogent arguments (Helfritz). The Canaanite origin has been revived by some modern authors (Antichan, Daumas, Slouschz), whilst for others the Berbers are autochthonous (Carette), with an admixture of Asian blood, especially Phoenician (Fournel, Mercier); some people, usually amateurs, even go so far as to reconstruct the ancient population of Barbary in all its elements (Rinn, _Les origines berbères_, Algiers 1889; Col. de Lartigue, _Monographie de l'Aurès, Constantine 1904_) and to establish bold relationships with the Celts, Basques and Caucasian peoples (Comm. Cauvet, _Les Origines caucasiques des Touareg_, in Bull. Soc. Géogr. Alger 1925; idem, _La Formation celtique de la nation tarquie_, ibid., 1926), or even with the indigenous populations on the other side of the Atlantic (idem, _Les Berbères en Amérique_, Algiers 1930). Anthropology is at a loss and the problem is not simplified by the existence of fair Berbers. The best qualified scholars are reserved in their opinion and generally consider that various elements coming from the south, the East and perhaps the north were added to a basic population rather similar to that which occupied the northern shores of the Mediterranean, but that this occurred at too remote a period for us to be able to date the various migrations. In any event, all these are no more than hypotheses; only linguistic data may perhaps enable us to solve the mystery of Berber origins, which, in the middle of the 20th century, remains complete.

b) Before Islam

All that can be said for certain is that the Berbers had been established in Northern Africa from a remote period. The classical historians and geographers refer to them under different names, which have not persisted as they were certainly not used by the peoples concerned: Nasamonians and Psylli occupying Cyrenaica and Tripolitania; Garamantians leading a nomadic existence in the Sahara; Machlyans, Maxyans populating the Tunisian Sahel; Numidians living in the eastern Maghrib; Getulians defending the desert borders and the high plateaux; and lastly Moors, spread over the central Maghrib and the furthest Maghrib. The establishment of foreign colonies, Phoenician, Carthaginian, and Greek, only had a limited influence on all these populations, except perhaps in the immediate vicinity of Carthage. They were divided into numerous rival tribes, which were, however, capable of uniting briefly against the foreigners, though never to the point of forming powerful and lasting states. At the time of the Punic wars, however, whilst anarchy persisted in the East, the beginnings of political organisation (creation of the kingdoms of the Massylae, the Masaesylae and of Mauritania) can be observed in the centre and the west. The genius of Masinissa, bolstered by the support of Rome, permitted this prince to unite the whole of Numidia under his rule and to create, in a few years, a kingdom comprising all the Berber populations from the Moulouya to the Syrtes. But this kingdom had but an ephemeral existence; it disappeared in 46 B.C. and Eastern Numidia became a Roman province. A few years later the kingdom of Numidia was reconstituted and became a simple Roman protectorate. Still shorter was the life of the kingdom of Mauritania, created by Augustus in 17 A.D. in favour of Juba II, and transformed into a Roman province as from the year 42.

Rome's domination in Africa lasted until the 5th century of the Christian era. In this period of time, the Berbers, whilst assimilated in the Province of Africa and in Numidia, were hardly changed in the mountainous areas, on the high plateaux, on the confines of the Sahara and in Mauritania. For the most part the Romans were content to impose on them the obligation of paying tribute and providing auxiliary troops, leaving the administration of the tribes to the local chieftains (principes, praefecti, reguli). The Berber spirit of independence was by no means extinguished; it showed itself at times in risings, led by more or less romanised natives, such as Tadfarinas (17-25 A.D.), and at times in attacks by the desert peoples or by the barely civilised tribes of the interior. Such were the attacks led by the Nasamonians and the Garamantians during the reigns of Augustus and Domitian; the insurrections of the Moors during the reigns of Hadrian, Antoninus and Commodus; of the Getulians during the period of military anarchy; the rising of the Quinquegentians (Kabyles of the Djurdjura) at the end of the 3rd century. As Roman authority progressively declined, there was an increasingly energetic reaction on the part of the Berbers, who affirmed their particularism by the adoption of heterodox doctrines, as for example Donatism, so that the religious quarrels which desolated Africa in the 4th century are, from many points of view, racial wars. The rising of the "Circumcelliones" appears to have been a kind of Berber Jacquerie. Revolts, such as those of Firmus (372-73) and Gildon (398) provide further testimony of the effervescence of the native populations. But, as previously, the Berbers were unable to ally themselves against the common enemy and to take their place. Their hostility to the Romans merely made the Vandal conquest easier. Like the Romans, these Germanic invaders were obliged to take the Berbers into account. Though Gaiseric succeeded in restraining them by enrolling them in his armies, his successors had to maintain a constant struggle against them. Mauritania, Kabylia, the Aurès and Tripolitania retained their independence. The Byzantines who, after defeating the Vandals, remained the masters of North Africa for a century (533-642), were no more fortunate. Indigenous chieftains such as Antalas in Byzacene and Yabdas in the Aurès, offered such resistance to Solomon, the governor sent by Justinian, that he had great difficulty in surmounting it. After the death of this general, killed in an expedition organised against the Levatians (Luwata [q.v.]) of Tripolitania, the situation in Byzantine Africa became very critical. John Trogilita was only able to stop the invasion of the Luwata with the assistance of the Berbers of the Aurès. But Byzantine authority was not recognised by all the indigenous populations. Outside Byzacene, the former Province of Africa (Tunisia) and the northern part of the province of Constantine, the coastal towns and some strongholds in the interior, the Berbers were everywhere independent. At that time they formed three groups: 1—in the East, the Luwata (Hawwâra, Awrlgha, Nafzâwa, Awraba) extending over Tripolitania, Cyrenaica, the Djarid, the Aurès; 2—in the West, the Šanhâja scattered throughout the central Maghrib and the furthest Maghrib (Kutâma in Little Kabylia, Zâwâ in Great Kabylia, Zankûta on the Algerian littoral between Kabylia and Chelif, Iferen from Chelîf to Moulouya, Ghûmûra in the Rif, Mašmûda on the Atlantic coast of Morocco, Gezûla (Djazula [q.v.]) in the High Atlas, Leûma in Southern Morocco, Šanhâja “with the ithâm” leading a nomadic existence in the western Sahara); 3—the Zanûta spaced out along the borders of the plateaux, from Tripolitania to the Djabâl Šamûr, and extending progressively towards the central Maghrib and the furthest Maghrib.

(G. Yver*)

Bibliography: The basic work is that of S. Gsell, Histoire ancienne de l’Afrique du Nord, Paris 1913-28; see also the historical works quoted in the bibliography of the articles Algeria, Morocco, Tunisia, as well as the bibliography of the preceding section, and Dureau de la Malle, L’Algérie, Paris 1852; Diehl, L’Afrique byzantine, Paris 1896; S. Gsell, Textes relatifs à l’Afrique du Nord: Hérodote, Alger-Paris 1916; P. Monceaux, Histoire...
The arrival of the Berbers scarcely changed the previous situation. Their first expeditions were, in reality, no more than raiding expeditions and left no traces other than the havoc wrought by the Muslim bands. It is true that the founding of al-Kayrawan (50/670) provided the Arabs with a permanent base of operations, but the expeditions of `Uqba b. Nafi` across the Maghrib were more like raids than an actual conquest. The towns still occupied by the Byzantines remained inaccessible to the Muslim leader, as did the mountain massifs, where he would have been unable to overcome the inhabitants. In fact so little were they under control that one of their leaders, Kusayla (q.v.), having surprised and killed `Uqba at Tabukhah, expelled the Arabs from Idrilkiya and formed a Berber kingdom comprising the Aurès, the Southern part of the present-day Department of Constantine and most of Tunisia (68-71/687-90). However Kusayla was unable to hold his position for long and, in spite of the resistance of the Berbers of the Aurès, symbolised by the legendary personage of the “Kāhinā” (q.v.), the Muslims finally emerged victorious at the end of the 1st/7th century. The conversion of the Berbers to Islam, initiated by `Uqba without great success, took place at the beginning of the following century. This was accomplished less by conviction than by interest, for the Arab generals had the idea that the natives would enrol in their armies in hopes of booty and thus be won over to their religion. The Berbers formed the nucleus of the armies which, under the command of Arab or even Berber leaders like Tāriq (q.v.), in a few years completed the subjugation of the Maghrib and, in less than half a century, brought about the conquest of Spain.

Harmonious relations, however, did not long prevail between Arabs and Berbers. The latter complained of having been poorly rewarded for their services and, in spite of the fact that they were Muslims, of being treated more like inferiors than equals. And so, having first broken away from orthodox Islam and embraced Khāridjī doctrines (see below, section III), they rose against the Arabs. The movement began in the West (122/740), at the instigation of a man of the Mātghāra, Maysara (q.v.), and subsequently, in spite of his death at the hands of his own followers, prevailed throughout the whole Maghrib and even spread into Spain. The Arabs suffered disastrous defeats, like that of Killūjām b. `Iyād (q.v.) in 123/741; they were expelled from al-Kayrawān, which was sacked by the Warfaddijīmā, followers of the Sufīre doctrines (139/756); then the Nawwāra (Ibadīs), led by Abu `l-Khattāb (q.v.), defeated the Warfaddijīmā and formed an Ibadī state extending over Tripolitania, Tunisia and the eastern part of Algeria. For a while the authority of the `Abbādī Caliph was abolished in Africa. But the Berbers, continuously divided amongst themselves, were incapable of profiting from their success.

The destruction of Abu `l-Khattāb’s army by troops from Syria restored Idrilkiya to the Arabs (144/761). Forty years of sanguinary struggles and innumerable engagements (300 according to Ibn Khaldūn) enabled them to re-establish their control over the eastern Maghrib. The rest of the country eluded them. A number of states, governed by chieftains of Arab origin, but inhabited by Berbers, for the most part heretics, not recognising the authority of the `Abbāsīs Caliph, came into being in various places. Such were the kingdom of Tāhurt (144-296/761-908) founded by the Imām Ibn Rustam with the survivors of the Ibadites from the East who had taken refuge in the central Maghrib [see RUSTAMIDS]; that of Sādarāta [q.v.] where the Banū Midrār reigned (155-366/771-977); that of Tlemcen [q.v.] in the Rif; the state of the Barghawātī [q.v.] on the Atlantic coast; finally, at the beginning of the 3rd/9th century, the kingdom of Fās, founded by Idrīs I, a descendant of `All b. Abī Tālib, with the help of Berber tribes (Miknāsa, Sadrāta, Zwāgha). Only the semi-independent dynasty of the Aghlabīs (184-296/800-909) recognised the sovereignty of the `Abbāsīs; they found among the Berbers soldiers for the conquest of Sicily, but had to suppress many revolts by the indigenous populations of Tripoliāntia, southern Tunisia, the Zāb and the Hodna.

Berber opposition to the Arabs remained, in fact, as inveterate as ever; it was even sufficiently strong to ensure the triumph of Shī`ī doctrines in the Maghrib, in spite of the fact that they were radically opposed to the Khāridjī doctrines embraced by the Berbers in the preceding century. The Kutāma provided the dā`ī Abī `Abbāl Allāh al-Shī`ī (q.v.) with the soldiers who fought the Aghlabīs and founded the Fātimid power for the benefit of the mahdī `Ubayd Allāh (297/910). The Fātimids, it is true, did not succeed in imposing their rule on the whole of the Berbers. Though they succeeded in suppressing the Imāmate of Tāhurt, they were unable to prevent the Idrīsids from maintaining themselves in the furthest Maghrib; they did obtain the submission of the Mafrāwā and the Zanāta who, out of hatred for the Fātimids, had placed themselves under the patronage of the Umayyads of Spain; finally, they had to combat the revolt of the Khāridjīs led by Abū Yazīd (q.v.) “the man with the donkey” (332-36/943-47), a revolt which endangered their power and which they only succeeded in suppressing with the help of the Ṣanḥādja of the central Maghrib. In addition, at an early date, the Fātimids turned their attention towards the East and, once the Caliph al-Mu`izzī had established himself in Egypt (362/973), they lost interest in the Maghrib. North Africa was once again disputed between the various Berber tribes, none of which was sufficiently strong to dominate the others. In the East, the Ṣanḥādja, taking the place of the Kutāma, upheld the authority of the Zirīds [q.v.], governors of Idrilkiya and Tripoliāntia (362-563/973-1167); in the West, following the disappearance of the Idrīsids, power passed into the hands of the Zanāta, at first nothing more than local governors on behalf of the Umayyads of Spain, but later independent princes at Fas until the advent of the Almoravids (455/1063). At the beginning of the 5th/11th century, the Zirīd state disintegrated; in the centre of the Maghrib there was founded the
Hammadid kingdom [q.v.], the rulers of which recognised the authority of the Caliph of Baghdad and took as their capital firstly the Kaifa and then Bougie (Bdijâya, 405/457-1014-1152). The anarchy resulting from the internecine Berber struggles was further complicated, in the middle of the century, by the invasion of the Hilâlî tribes, which had as an immediate result the devastation of Irikiya and part of the Maghrib, and which entailed, as a long-term consequence, a profound modification of the ethnography of North Africa.

However, just as the disorder seemed to reach its climax, two Berber dynasties, that of the Almoravids [see AL-MURABITUN] and that of the Almohads [see AL-MUWAHHIDUN], both proclaiming reforming religious doctrines, succeeded in establishing their temporary supremacy in North Africa. The triumph of the Almoravids was that of the Lantûna, who until then had led a nomadic existence between southern Morocco and the banks of the Senegal and the Niger. Converted to Islam in the 3rd/9th century, they had for a long time been only nominal Murabites. They had been instructed in orthodox doctrine and practices by 'Abd Allâh b. Yânûn (d. 451/1060) and resolved to carry the faith to the Blacks of the Sudân and to the ignorant populations of southern Morocco. Their conquests speedily passed beyond these limits. Abû Bakr b. Umar founded Marrâkush (462/1070) and Yûsuf b. Tashfîn (Tâshfünin) within a few years subdued the whole of Morocco and the central Maghrib as far as the borders of the Hammadid kingdom, halted the progress of the Christians of the Iberian Peninsula by the victory of Zallâka [q.v.] (479/1086), dethroned the Andalusian amirs, and became the sole master of the whole of Muslim Spain. The decline of the Almoravids was as rapid as their success. Exhausted by their own victories and by contact with a higher civilisation, the Berbers of the Sahara rapidly disappeared. To replace them, the Almoravid Caliphs were obliged to have recourse to the use of Christian mercenaries, whilst they themselves, unmindful of Islamic orthodoxy, scandalised strict Muslims by their conduct. Won over to the unitarian doctrine (muwâhidûn) by the preaching of Ibn Tûmart [q.v.], the Masmûda of the Atlas rose against them. Under the command of a man of genius, a Berber of the Kûmîya, 'Abd al-Mu'min [q.v.], they overcame the Almoravids without great difficulty (541/1147). The Empire founded by the Almohads was still more extensive than that of their predecessors. Though it is true that 'Abd al-Mu'min did not succeed in subduing the whole of Spain, on the other hand he destroyed the Hammadid kingdom of Bougie and the Zirid kingdom of Irikiya, expelled the Christians from the ports which they had occupied, and made himself master of all the country between Syrte and the Atlantic. Thus a great Berber Empire extended over the whole of North Africa; however it was not long before it began to crumble. The Almohad Caliphs were not more successful than the Almoravids in remaining faithful to orthodoxy; one of them, al-Ma'mûn [q.v.], even went so far as publicly to curse the memory of Ibn Tûmart, and dealt rigorously with the faithful. The rivalries of the various Berber splinter groups was an additional factor which contributed to the disintegration of the empire created by 'Abd al-Mu'min. The quarrels of the Masmûda and the Kûmîya led to constant bloodshed at the Moroccan court; the tribes of the central Maghrib supported the enterprises of the Banû Ghâniya [q.v.], or attempted to make themselves independent. A century after the death of 'Abd al-Mu'min, the last of his line, Abû Dabbûs, reduced to the role of bandit-chief, met his end in obscurity (668/1269).

The Maghrib was already divided among the powers, the Marinids [q.v.] installed at Fas, the 'Abc Al-Wâdid [q.v.] at Tlemcen (Tilmûsân), the Hafsids [q.v.] at Tunis. Not one of these new dynasties was capable of imposing its supremacy on the others, or even of making its own subjects respect it. In Morocco, the tribes of the mountain regions were in a state of constant revolt against the Marinids; in the central Maghrib, the Banû Wâmana of the Ouarsenis, the Zwâwa of the Wadids, the Kabyles of the province of Constantine, and the populations of the Zâb and Djarid, remained outside the authority of the sovereigns of Constantine, Bougie and Tunis; the same was true of the oasis of the Jebel Nafusâ and the Aurès. The inability of the Berbers to organise themselves in a large State is conclusively demonstrated. It therefore becomes impossible to follow their history except by making a historical assessment of the various tribes. They had been instructed in orthodox doctrine and practices by 'Abd Allâh b. Yânûn (d. 451/1060) and resolved to carry the faith to the Blacks of the Sudân and to the ignorant populations of southern Morocco. Their conquests speedily passed beyond these limits. Abû Bakr b. Umar founded Marrâkush (462/1070) and Yûsuf b. Tashfîn (Tâshfünin) within a few years subdued the whole of Morocco and the central Maghrib as far as the borders of the Hammadid kingdom, halted the progress of the Christians of the Iberian Peninsula by the victory of Zallâka [q.v.] (479/1086), dethroned the Andalusian amirs, and became the sole master of the whole of Muslim Spain. The decline of the Almoravids was as rapid as their success. Exhausted by their own victories and by contact with a higher civilisation, the Berbers of the Sahara rapidly disappeared. To replace them, the Almoravid Caliphs were obliged to have recourse to the use of Christian mercenaries, whilst they themselves, unmindful of Islamic orthodoxy, scandalised strict Muslims by their conduct. Won over to the unitarian doctrine (muwâhidûn) by the preaching of Ibn Tûmart [q.v.], the Masmûda of the Atlas rose against them. Under the command of a man of genius, a Berber of the Kûmîya, 'Abd al-Mu'min [q.v.], they overcame the Almoravids without great difficulty (541/1147). The Empire founded by the Almohads was still more extensive than that of their predecessors. Though it is true that 'Abd al-Mu'min did not succeed in subduing the whole of Spain, on the other hand he destroyed the Hammadid kingdom of Bougie and the Zirid kingdom of Irikiya, expelled the Christians from the ports which they had occupied, and made himself master of all the country between Syrte and the Atlantic. Thus a great Berber Empire extended over the whole of North Africa; however it was not long before it began to crumble. The Almohad Caliphs were not more successful than the Almoravids in remaining faithful to orthodoxy; one of them, al-Ma'mûn [q.v.], even went so far as publicly to curse the memory of Ibn Tûmart, and dealt rigorously with the faithful. The rivalries of the various Berber splinter groups was an additional factor which contributed to the disintegration of the empire created by 'Abd al-Mu'min. The quarrels of the Masmûda and the Kûmîya led to constant bloodshed at the Moroccan court; the tribes of the central Maghrib supported the enterprises of the Banû Ghâniya [q.v.], or attempted to make themselves independent. A century after the death of 'Abd al-Mu'min, the last of his line, Abû Dabbûs, reduced to the role of bandit-chief, met his end in obscurity (668/1269).
Distribution at present

At the present day, the Berbers, although without doubt constituting the basis of the population of North Africa, no longer form a homogeneous mass and one can at most take into account those of them who have retained the use of the Berber language; they would appear to amount to over 5,000,000 individuals. Many of them are in fact bilingual—even trilingual—but still more numerous are those who have lost—often deliberately—all memory of their origins as well as their customs and language, frequently providing themselves expressly with an Arab genealogy; in contrast, a few elements here and there lay claim to a Berber origin, though they have ceased to speak the language of their ancestors. Generally speaking, Berber has in fact always receded before the advance of Arabic, and recent events or those of the present day have tended to accentuate the narrowing of the area in which the old language is used; the disappearance of various Berber speaking pockets, especially in eastern Barbary, is a contemporary phenomenon, and it seems likely that the political situation in North Africa will continue in the immediate future to favour the extension of the domain of Arabic.

However, several considerable groups have persisted in the mountain massifs and in the desert, that is to say in those regions only superficially penetrated by the Arabs. They are linked together by pockets more or less close to one another, which remain as evidence of the old ethnic and linguistic pattern. In general terms, it may be said that the density of Berber groups increases from east to west. They are scattered over a vast area which extends from the Egyptian frontier (with Siwa and the oasis of Gharyan) to the Atlantic Ocean, from the cliff of Hombori, south of the Niger, to the Mediterranean.

Libya.—Various groups subsist in the mountains of the country of Barqa, in the Djabal Ghurýán, Iren, Nafta; they are also to be found in the oases of Awdjila, Sokna, Timisá and, on the coast, at Zwara; some of the elements of the population of Awdjila and of Urfella, in the neighbourhood of Tripoli, say they are Berbers although they speak Arabic (about 23% of the population in all).

Tunisia.—Six villages in the island of Djerba: Adjim, Guellala, Sedoukhe, Elmá, Mahboub and Sedghjane, to which must be added seven on the mainland: Tmangourt, Sened, Zraoua, Taoujdjout, Tamerzet, Chnini and Douiret, which are still partly Berber-speaking; these Berbers, many of whom spend a long time in the towns of the North, especially in Tunis, where they occupy positions of trust, are much attached to their dialect, which moreover serves them as a secret language (1% Berber-speaking in all).

Algeria.—Kabylia in the north and the Aurás in the south-east have been the two poles of Berber resistance; these regions are now only separated by a fairly narrow Arabic-speaking zone, up to Sétif. In the Algerian and Oranian Telí country, the groups only reach some importance in the mountain region of Blida and the Chéf (Ouarsenis, Djendel, Bent Menacer, Chenoua); finally, several groups appear along the Algero-Moroccan frontier (Bent Snous, near Tiemcen) (about 30% Berber speaking in all).

Morocco.—The geographical configuration of Morocco has been especially favourable to the survival of the Berber populations; though a number of tribes have relinquished the use of Berber, it nevertheless remains the language of the great groups of the Zanata, Masmúda and Sanház in the Rif, the Middle, High and Anti-Atlas, as well as in the Sous. R. Montagne, Vie Sociale, 17, has estimated that the Arabs constitute from 10 to 15% of the population in Morocco, Arabised Berbers from 40 to 45%, the remaining 40 to 45% being Berbers who cannot disclaim their origin.

Sahara.—In the Algerian and Moroccan Sahara, the oases of Oued Righ, Ouargla, Nouaga, the seven towns of the Mzaá, the “ksoures” of the Gourara, the Touat, the Tidikelt, of Figuig, of the Tafillalt, of the Dades; then in a very extensive zone in the shape of a triangle, between Ghadames in the North, Tombouctou in the south-west and Zinder in the south-east, including Ghat, Dj Janet and the Ahaggar, we have the various groups of Touareg (q.v.).

Berber is also spoken in Mauritania (Zenaga) by about 25,000 inhabitants (especially the Trárâ); the Wada pocket uses Azer, a Soninke dialect mixed with Berber.

Diaspora.—Outside those zones roughly indicated above, attention must be drawn to the influx of the Berbers into the large towns of Morocco (Casablanca) and Algeria (Algiers), where, “detrubalised” and lacking the control of their natural social group (see below section IV), they tend to form an impoverished proletariat, ready for anything. Outside Barbary, there are to be found in the Lebanon descendants of the Kutâma who arrived with the Fātimids and, in Damascus, Algerian Berbers who emigrated at the beginning of the conquest, or who rejoined the amīr ʿAbd al-Kûdár [q.v.] or his descendants. Some elements remained in various European countries after the second world war, and a few are even reported in America, but as yet all Metropolitan France has the largest number of Berbers; the majority of them are Kabyles, who have temporarily—or in some cases permanently—abandoned the barren soil of their homeland, seeking to find more fruitful means of livelihood abroad; these displaced persons also form a proletariat which finds it difficult to adapt itself to the conditions of life in the Metropolis.

In ancient times, the religion of the Berbers appears to have been divided into a multitude of local cults, corresponding to the tribal divisions. The objects of this cult, concerning which we only possess scanty and incomplete information, were doubtless natural objects: grottos, rocks, springs, rivers and mountains, to which must be added the celestial bodies, at least the sun, moon and some of the stars. The veneration accorded them still persists in some of the legends, beliefs, rites and religious ceremonies. In spite of their conversion to Islam and their deep feeling of belonging to the Islamic community, the Berbers have in fact retained a host of pagan practices, some of which have more or less been adapted to Islam, whilst others remain in direct opposition to Islamic precepts; these survivals are particularly apparent in agricultural rites and festivals (practices for obtaining rain, harvest rites, lighting bonfires, *anfisa* [*q.v.*]), the concept of baraka [*q.v.*], the cult of saints etc.

It cannot be denied that from Punic times, various foreign divinities were not only borrowed, but were in fact assimilated to the national divinities (see H. Basset, *Influences puniques chez les Berbères*, in *RAfr.*, 1921). Judaism also obtained numerous proselytes, and even if it did not play the rôle which some claim for it, it was disseminated over the whole of North Africa; in fact, with the exception of the descendents of Jews expelled from Spain in the 9th/10th century, the majority of indigenous Jews are descended from proselytes pre-dating the appearance of Islam (see Slouschz, *Hebraeo-Ptichimici et Judico-Berbères*, Paris 1909; M. A. Simon, *Le Judaïsme berbère dans l'Afrique ancienne*, in *Rev. Hist. et Philos. Fac. thêol. protestante de Strasbourg*, 1946; L. Voinot, *Pèlerinages judéo-musulmans du Maroc*, Paris 1948; P. Flamand, *Population isldiste du Sud marocain*, in *Hesp.*, 1950, 365 ff.; idem, *Un Mellah en pays berbère: Demnate*, Paris 1952; idem, *Les Communautés isldistes du Sud marocain*, thesis, Sorbonne 1957).

Judaism paved the way for Christianity which prospered in spite of the bitter struggle which it had to conduct against paganism and the internal quarrels which soon beset it; it will be sufficient to note that it afforded the Berbers an opportunity of grouping together against Roman rule and that they enthusiastically embraced heresies (Arianism, Donatism, etc.) opposed to the doctrine of the Church of Rome (see P. S. Mesnage, *Etude sur l'influence du Christianisme sur les Berbères*, Paris 1902; idem, *Le Christianisme en Afrique*, Algiers 1915; E. Albertini, *L'Afrique romaine*, 15 ff.; Dom Ledercq, *L'Afrique chrétienne*, Paris 1900; Monceaux, *Histoire littéraire de l'Afrique chrétienne*, Paris 1900-23).

The same thing happened at the time of the Muslim conquest: it was only the name of their adversaries which had changed. We do not know in detail the history of the conversion of the Berbers to Islam, but tradition has it that they succeeded twelve times and Islam only finally triumphed in the 6th/7th century; it was at this date that the last indigenous Christians disappeared, whilst Jewish communities survived down to our own day. At the beginning of the conquest, the converted Berbers professed the orthodox doctrines, the only one known to them; but their spirit of independence soon showed itself by their adoption of Khâridjî doctrines which put forward the most egalitarian ideas (see *Ibadyya*, *Khâwarîd* and the works of T. Lewicki, especially *Etudes isldîtes nord-africaines*, Warsaw 1955, and *Là répartition géographique des groupements isldîes dans l'Afrique du Nord au moyen âge*, in *Rocznik Orientalistyczny*, 1957; see also Chikh Bekri, *Le Kharijisme berbère*, in *AEEO*, Alger 1957, 55-108). The clearest indication that religious doctrine little concerned them fundamentally is given by the fact that one party espoused the cause of the *Shî'îs*, not only that of the Idrîsîs of Fâs, but even of those who had come under the influence of the Persian outlook and saw in the *imâm* an incarnation of the Divinity. Thus it came about that alongside the Khâridjîs (Sufrîs and Ibađîs) there were the Fâmînîs, and that the Kutâmîs provided the main support for the *mâkî* ʿUbayd Allâh. This tendency to turn to extremes was again in evidence when a puritan reaction brought about the triumph of Sunnî doctrines with the Lamtûnî (Almoravids) of the Sahara, recently converted in the 5th/10th century; it was further emphasised with the Maṣûmîn of the Atlas who founded the Almohad Empire and destroyed the remaining dissidents, Christians or Shî'îs, with the exception of a few Khâridjî communities who were protected by mountains, the desert or the sea; it again made its appearance with the formation of the small Marabout states which arose in Morocco from the 5th/11th century onwards (see R. Montagne, *Nie sociale*, 22 ff.).

Among reactions against official Islam, two further attempts must be cited which aimed at creating a new religion in Morocco: in the Rif, in the 4th/10th century, the attempt of Há-Mîn al-Muftari [*q.v.*] and, on the Atlantic coast, that of *Ṣâlih b. Ṭârîf* [*q.v.*].

After having provided a Father of the Church, Saint Augustine, born at Thagaste (Souk-Ahras), the Berbers under Islam only produced theologians who were adept in disputation, but no great intellects. Wherever Sunnî Islam triumphed, it was Maṣûmî which was adopted, and it continues to prevail in Barbary, though some Khâridjî communities (Ibâđî) survive in the Djabal Nafusa, at Djerba, in southern Tunisia and in the Mzab.

BERBERS 1179

IV. — Customs, Social and Political Organisation

Observers have all been struck by the character and usages of the Berbers, which differ in many respects from those of the Arabs, particularly as regards women, who, in general, enjoy a greater degree of freedom (see for example the 'courts of love' among the Touareg (ahal), H. Lhote, Touaregs du Hoggar, 288 ff.) and to a certain extent, greater respect (on women, see M. Gaudry, La femme chaouia de l'Aurès, Paris 1929; A. M. Goichon, La vie féminine au Maab, Paris 1927-31; L. Bousquet-Lelivre, La femme kabyle, Paris 1939; on matriarchy: G. Marcy, Les vestiges de la parenté maternelle en droit coutumier berbère, in RAfr., 1941(3-4). As a rapid synthesis is made impossible by the great diversity which appears from one group to another, we shall limit ourselves to giving references to the large number of monographs and works of ethnography which have been devoted to North Africa.

The Berbers (except in the Maab) are basically a rural population, leading a nomadic or sedentary existence. The nomads live in tents, of which the different types have been frequently described (see H. Lhote, Touaregs du Hoggar, 221 ff.; E. Laoust, L' HABitation chez les transhumants du Maroc central, in Hesp., 1930 ff.;) the sedentary population live in houses (see E. Laoust, op. cit.; A. Adam, La Maison et le village dans quelques tribus de l'Ait-Atlas, in Hesp., 1950, 289 ff.) or even in majestic kasbas (kasaba) which in some respects recall the style of South Arabia (see H. Terrasse, Kasbas berbères de l'Atlas et des oasis. Les Grandes architectures du Sud marocain, Paris 1938; A. Paris, Documents d'architecture berbère, Paris 1945; K. C. Creswell, A Bibliog. of Muslim Arch. in North Africa, Paris 1954, passim).

One of the peculiarities of Muslim Barbary is the retention of customary law, which continues to be applied, either officially or unofficially (see 'dād), both in Algeria and Morocco (for Tunisia, see G. H. Bousquet, Note sur la survivance du droit coutumier berbère en Tunisie, in Hesp., 1952(1-2, 246-9). This custom ('dād, 'urf, târif, tāfādi) is essentially oral, but of recent years some have felt the need to record in writing in Arabic and even in French, though rarely in Berber (see below section VI) some ḫānūns, simple lists of offences, with the scale of appropriate fines (imprisonment is unknown). Justice, based on custom, is dispensed, in civil and criminal matters, either by a kind of (indigenous) arbitrator, or by judicial djāmādūs which set themselves up as clandestine tribunals (for example in the Aurès subject to French law) or which in contrast have had a legal existence (as in Morocco since the famous dahir (pahir) of May 16th 1930, called the 'Berber dahir', which gave rise to numerous protests because it established customary tribunals). Needless to say, this law is not uniform and varies quite considerably from group to group; as a result of its lay origin and oral transmission it is subject to modification (see Hacoun-Campredon, Étude sur l'évolution des coutumes kabyles, Algiers 1921).

The social organisation of the Berbers also differs in many respects from that of the Arabs; it is based on the ties of blood, real or fictitious. The smallest social unit is the "hearth", a number of hearths opposed, but not incompatible, systems, which seems a further proof of the diversity of the ethnic elements combined under the name Berber: on the one hand, an aristocratic type, having a warrior nobility, a religious caste, a class of tributaries and finally the serfs; this is the régime prevailing among the Touareg, who are governed by an amdokal [q.v.], each tribe being placed under the authority of an amghar [q.v.]; on the other hand, in the rest of Barbary, we find a democratic type, with an elected assembly (djāmādā, infas, ašt arḥān) in which all power resides (legislative, judicial and executive); each assembly of a lower group delegates members to higher assemblies, but generally speaking, it is the djāmādā of the division which has most political weight. This democratic system usually results in a de facto oligarchy and does not impede the development of personal power, at least in those regions where the internal leagues (leff [q.v.]) group independent divisions together (and not just villages or parts of villages, as in Kabylia, the joffs [q.v.]; R. Montagne (Vie sociale, 91 ft.) has pertinently analysed the stages in the development of this power of the temporal leaders, who have been called the "Lords of the Atlas".

BERBERS

V. — LANGUAGE

One cannot but envy the assurance with which René Basset, fifty years ago, painted a picture of the Berber language in this *Encyclopædia*. By an inevitable process, research has produced questions in greater number than answers; some illusions have vanished. However, the balance-sheet of this half century is not negative: a mass of materials has been collected, their classification and analysis has been undertaken and sometimes fairly extensively developed; an attempt at a synthesis has even been made by André Basset, but he is cautious and is at pains to avoid taking hypothesis for established fact.

A. The historical problem

1. — History of the language: Berber is almost exclusively a spoken language, and its history, even in the recent period, is almost unknown owing to the lack of written documents. It is only in the 19th century that the texts collected orally from Berbers by Europeans start to become numerous. Indigenous documents are rare and of limited scope. Southern Morocco has produced manuscripts in Arabic script (cf. section VI) of which we only possess partial and out-of-date editions; moreover, the language of these works of religious edification, in spite of its undeniable interest, seems somewhat artificial. The Berber words and expressions cited by Arab authors have not received a systematic treatment. The best known and also the oldest are the phrases of the 12th century published by E. Lévi-Provençal in his *Documents inédits d'histoire almohade*, Paris 1928 (cf. G. Marcy, in *Hesp.*, 1932, 61-77) and which appear to confirm the relative stability of the language. The Arabic texts have also preserved a number of Berber ethnic names, anthroponymics and toponyms which still remain to be studied.

The remains of Guanche, which was spoken in the Canary Islands up to the 17th century, are generally considered a Berber language. However, after a very detailed investigation, J.-D. Wölflé openly relates a part of the Guanche forms to Berber.

Further back than the Almohad period, the linguist finds no Berber documents properly so-called. The early centuries after the Arab conquest are even more "obscure" for him than for the historian. Antiquity confronts us with a number of very difficult problems. It has bequeathed us a documentation as mysterious as it is abundant on African dialects:

a) Over a thousand Libyan inscriptions have been published (cf. section VI). The alphabet used is known with fair accuracy, at least for the bilinguals, but the proposed interpretations show serious divergencies and are not convincing: Libyan has not been deciphered.

b) In the east and particularly in Tripolitania, a series of inscriptions in Latin characters has been discovered, whose meaning is unknown. One or two words are Latin, others can be explained by Punic, but the remainder has not been identified.

c) A host of African words, mostly proper names, are to be found scattered throughout the Punic, Greek and especially Latin inscriptions, as well as in the classical authors. Some of these words have been identified as Punic; the majority have only given rise to nebulous explanations.

Thus, little has been made of these old materials. Why is this the case? Very few research workers venture into this field and if they do so, it is generally in the course of other investigations or in the service of a different discipline. Moreover, the unity of the documents, scattered both in space and time, is problematical. The inscriptions of Tripolitania are of an early period. The Libyan ones come from Tunisia, Algeria and Morocco and cover several centuries: the only one which is dated goes back to 139 B.C.; some appear to be contemporary with the Roman Empire; the majority cannot be dated at all. The onomastic material is even more dispersed: provided by texts ranging from Herodotus to the latest antiquity, it concerns the whole territory comprised between Egypt and the Atlantic. Such diverse evidence inevitably represents several stages of linguistic development, or even several languages. Its interpretation assumes that preliminary work has been done in listing and subjecting them to a critical examination; however, a general onomastic index is still awaited. In spite of the extraordinary diversity of this ancient material, the modern Berber dialects are frequently thought of as providing a miraculous key capable of unlocking all doors. Extensive use is made of the glossaries, but only in order to adduce isolated comparisons or erect a superstructure of conjectures, whereas a system of well established correspondences alone could afford proof. A direct connexion is postulated between Libyan and Berber, considered as two stages of the same language. This assumption is based on history, which discovers Berber populations in Africa from ancient times and concludes that the Berber language was already spoken there: but was it the only language? Is it really Berber that is concealed in the Libyan inscriptions? The parallels which are certain are rare; the similarity of the Libyan and Touareg scripts (cf. section VI) does not demonstrate that the languages are related: the difficulties encountered call for criticism. A. Basset has drawn
BERBERS

attention to the fact that the argument taken from
history is negative. A. Picard is still more sceptical.
This example of caution, little imitated as yet, is
thus provided by his conciliatory attitude. A comparison
of phonological systems would be more interesting,
than the argument taken from history is negative. A. Picard is still more sceptical.
This example of caution, little imitated as yet, is
thus provided by his conciliatory attitude. A comparison
of phonological systems would be more interesting,
than the argument taken from history is negative. A. Picard is still more sceptical.
This example of caution, little imitated as yet, is
thus provided by his conciliatory attitude. A comparison
of phonological systems would be more interesting,
systems rest. Here, only slightly modified, is the table proposed by A. Basset:

Consonants  labials  b  f  m
dentals  t  d  n  l  r
sibilants  s  z
palatal sibilants  š  ž
velars  k  g
uvular  γ
Semi-vowels  γ  w
Vowels  i  u  [ə]

The tendency for short occlusives to become sprirant in numerous dialects (Rif, Middle Atlas of Morocco, Kabylia, etc.) has already been mentioned. This may lead locally to the introduction of new phonemes and to modification of the phonological system. Almost everywhere this system has been complicated and distorted by large-scale borrowing from Arabic, to which the presence particularly of the pharyngals h and e and the laryngal k in the majority of dialects appears to be due.

A remarkable fact is the presence in Berber of emphatic consonants. Apart from d and t there are attested: [ð], [l], [l] and even [h], [l], but they cannot be accorded phonological status a priori. Emphasis does not always belong exclusively to the phoneme concerned. On [l], cf. below.

y and w are sometimes pronounced as consonants [y], [w], and sometimes as vowels [i], [u], according to their position; quality varies with syllable pattern, which is not everywhere the same. Furthermore, besides these occurrences of phonetic [i] and [u], morphology suggests the need to recognise separate vowels i and u: which is not devoid of difficulties.

Each of the three vowels a, i, u comprises a range of gradations conditioned by the articulation of the neighbouring consonants and devoid of phonological value. As regards [ə], it is in principle a purely phonetic element, the occurrence of which is subject to the laws, as yet not very well known, which govern the syllabication and structure of words. Very unstable in central and southern Morocco, it perhaps presents a greater consistency in Kabylia; in spite of certain indications by Foucauld which does not always belong exclusively to the phoneme concerned. On [l], cf. below.

An important rôle is played by the quantitative value of consonants. Every consonant or semi-vowel may be “short" or “long," thus creating a type of opposition widely exploited by the vocabulary and to a still greater extent by the morphology: Chleuh ḫi "tongue"; ḥi "he has soiled"; ḥa-ti "he has given it (masc.)"; ḥa-hi "he has given it (fem.)."

The long consonant seems to be less characterised by its duration than by the tenseness of its articulation; lengthening sometimes results in transition from sprirant to occlusive and from voiced to voiceless: thus it comes about that the most frequent realisation of γγ is [ŋg], and that of ḥd [k]; we may be represented by [ggy] on one occasion even [kk] or [h], and γγ by [gg].

Not all vowels always have the same duration; their length, however, is not pertinent, except perhaps in Touareg.

Accentuation of a word, where the accent is one of intensity, is not recognised as fulfilling a distinctive function.

a. — Forms and their functions.

a. — The Berber word. Words are made up of a theme and inflexions. The theme is produced by the combination of a root with a schema. The root is bound to a minimum concept beyond any kind of grammatical categorisation. It is always consonantal, containing one or four, most frequently two or three consonants, being characterised by their number and order. The term schema, borrowed from the Arabists (J. Cantineau), indicates the structure of the theme; the schema gives the word part of its grammatical identity: thus, to a degree which varies with cases, it may indicate the nominal or verbal nature of the word, the number of the noun, the form of the verb, etc. The schema itself is defined by the presence or absence of formative consonants, by short or long quantity of formative consonants or radicals, by the presence or absence, the place and quality of the vowels. The inflexions complete the grammatical description of the word; as prefixes and/or suffixes, they appear fundamentally to be consonants; in certain cases, it is convenient to recognise a zero inflexion. Examples: Touareg təbras "she ties" = theme -əbras- (root KRS, schema i 2 a i 3) + inflexion -t-; takarrissi "knot" = theme -akarris- (root K RS, schema a 1 2 i 3) + inflexion -t-t. The system on the whole closely resembles that of Arabic, though it is more difficult in Berber to isolate the roots and establish the precise value of the schemas.

Berber distinguishes two genders, masculine and feminine, and two numbers, singular and plural.

b. — The verb. The forms (simple and derived, Verbs appear either in a simple form or a derived form. The simple form is constructed in principle with or without an object and is at times translated by our active voice and at other times by our passive. Derivation is achieved mainly by means of prefixes. There are three primary derived forms, which sometimes combine among themselves. They have frequently been referred to as the causative, passive and reciprocal forms, according to their most apparent significance; these designations do not correspond closely enough to the facts and have nowadays been replaced by those of sibilant-form, dental-form and nasal-form according to the articulation of the prefix. Examples: Touareg xuyba- "to strike with the hand"; xuyba- "to strike"; təwba- "to be struck"; təwba- "to strike one another". In fact, not all verbs possess the complete series of simple and derived forms. A derivation by the suffix -t is well attested in Touareg and has left traces elsewhere.

The themes. For each of the forms, simple or derived, there are three themes or groups of themes: 1) an aorist theme: ex. Chleuh -ls- "to put on clothes"; -əsl'u- "to become red"; 2) an intensive aorist theme: -iss-, -əsl'uy-, which is sometimes accompanied by a negative intensive aorist theme; 3) a preterite theme: -ίsia-, -əgg'ay-, to which is connected a negative preterite theme: -ίsi-, -əgg'ay-. These themes may contrast with one another by alternation of vowels or of consonantal length, or by prefixing -ls- (in the intensive aorist only), or again by a combination of two or rarely three of these processes. In principle the two aorists form a group opposed to the preterite, as -iss'uy/-isĩuy- to -əgg'ay-. It frequently happens, however, that the themes of the aorist and the preterite coincide. When several verbs adopt precisely the same procedure to differentiate their themes, they are said to belong to the same type: this affords a means of formal classification which is justified by the existence of a relationship, often masked but
sure, between the verbal type thus defined and that of the derived forms, as well as between the verbal type and the schemas of the nouns of action and of the agent. The verbal type itself appears to be more or less bound to the structure of the root.

A careful examination of all the themes obliges us to distinguish a large number of types of verbs. In practice, account is taken above all of the antithesis of the aorist and preterite themes, which enables us to recognise the main groups, particularly the “zero vowel” type (A. Basset) in which the affirmative aorist and preterite are formally identical (Chleuh -mgir: -mgir “to harvest”), the type with a non-alternating “full vowel” (-mun: -mun “to accompany”), the pre-radical alternating vowel type (-ams: -ams “to walk”), the intra-radical (rar: rur “to give back”), the post-radical (-la: -la “put on clothes”), different types of complex alternations (-izwi: -izzg “ay “to become red”).

The table of verbal themes lacks symmetry, as there is no intensive preterite given. The latter exists in Touareg, and A. Picard, basing himself on certain Kabyle and Moroccan data, has recently raised the important question of the Pan-Berber character of the intensive preterite (Mémorial A. Basset, 107-20).

The inflexions. — A first though incomplete series of suffixed personal inflections is associated with the aorist and intensive aorist themes to produce the ordinary and intensive imperatives. The inflexion is zero in the 2nd person singular, which is the form of the non-intensive imperative used by grammarians to indicate a verb (“the verb mgir”, the verb mun”, etc.).

The impersonal inflexions y-n (on occasion zero-n in the plural) are added in well defined syntactical conditions (cf. below) to any one of the themes to form what is called the “participle”. Survivals of an older stage (in the negative preterite) or disturbances (in the aorist) are to be observed locally.

In addition to these preceding cases, a third series of inflexions, prefixed and/or suffixed, is found with all the themes, indicating person, number and, in the 3rd person sing. and plural, gender. However, a conjugation without prefixes is attested in Kabyle (with identical inflexion for all persons of the plural) and in Touareg for the so-called verbs “of quality”, verbs of becoming rather than verbs of state. It is probably the vestige of an ancient opposition between the inflexions of the aorist and those of the preterite.

The working of the verbal system. — It is more difficult to determine the meaning of the forms and themes than to classify them formally. Brief indications have been given above for the simple and derived forms. It remains for us to describe briefly how the choice is made between the different themes of a given form. One fact is certain: the time concept is foreign to the verbal system, and Berber, like the Semitic languages, gives priority to aspect. But it has several mechanisms which are peculiar to it; we must not be deceived by terminology, borrowed from other linguistic fields. There is a fundamental antithesis, indicated already for the morphology, between the respective functions of the aorists and the preterite. Thus it is that certain particles (aal, aal, ara, etc.) may be followed by either of the two aorist forms but not by the preterite: Kabyle ad-yaf (“he will find”); ad-yafi (“the will find (incessantly)”)(but ad + preterite yaf is impossible). When these particles are not present, the elements of the system are grouped somewhat differently: most frequently

the intensive aorist and the preterite alone remain in opposition: ad-yaf (“these populations) dwell” (process envisaged as a series or sometimes as a development); ad-yaf (“the members of such and such a family) dwell, have taken up their domicile” (process envisaged from beginning to end, as a whole). With the exception of certain optative formulas, the non-intensive aorist, therefore, only appears in certain syntactical conditions where it may assume the meaning of any other verbal theme whatsoever: in this sense one may, with A. Basset, consider it as the “unmarked” term of the aorist: preterite opposition; this use of the aorist is very frequent in the Moroccan dialects, but is less current elsewhere.

Whatever the theme, the verb assumes the form of the “participle” when it occurs in a relative clause in which the subject and the antecedent are identical: Kabyle wun yaf “he (who) dwells”.

The satellites of the verb. — The particles of the aorist have been mentioned above. There are other particles (ur, da, ilia, etc.) which may accompany the intensive aorist or the preterite; the list of them and the conditions in which they are used vary considerably according to the dialect, some dispensing with them altogether. The basic negative particle is ur (ul, ud, u); it always precedes the verbal form which, in different dialects (Kabylia, Aurès, etc.), may then be followed by a second element (ara, 3(a), etc.); ur is encountered with all the verbal themes, but negative constructions are not everywhere identical.

The verb is frequently accompanied by a particle “of approach” d and sometimes by a particle “of withdrawal” n(m), which indicate the direction of the action. Finally the personal pronouns, direct or indirect objects of the verb (cf. below), are closely welded to it. In the case of simultaneous use, these pronouns and the particles of approach and withdrawal follow one another in a fixed order: indirect object (I), direct object (D), particle (L). After a number of words (particles of the aorist, the intensive aorist, negation, etc.) or in a relative clause, the elements IDL precede the verb; elsewhere they follow it; hence those chains which fluctuate on both sides of the verb: Chleuh ad-as-tr-m-d-aemy “that I may bring them to him”: taw-y-as-tr-m-d “I have brought them to him”.

C. — The noun. All nouns cannot be reduced to a single morphological type. Some have been borrowed from Arabic (or from other languages) and have not been berberised; they have retained the Arabic article and are characterised by the initial consonant group IC- or CC (<IC- by assimilation): sikas “glass”, ssouq “market”; this group is considerable in all dialects except Touareg.

The majority of Berber or berberised nouns in principle have an initial a, i- or u- if they are masculine, la-, li- or tu- if they are feminine; this initial has been related to the demonstrative elements, which is unlikely; locally in a number of schemas it loses its vowel. The prefixed l- characterises the feminine; many nouns also have a suffix -e in the feminine singular: Chleuh ayul “ass”; tayyl “she-ass”; ifsmmi “house”. The vowel of the initial syllable participates in both oppositions of number and state (cf. below). The plural is indicated, furthermore, either by a vowel a preceding or following the last radical consonant, with or without further vowel alternances: ayulp: iyulp; aggul “fortified granary” ayul, or by a basic suffix -n: aryas “man”: irgas, or by a combination of both processes: irt “star”: irtun. The concept of state, in spite of the ambiguity of the terminology, is
characteristic of Berber: in certain syntactical conditions, when the noun is closely associated with the word preceding it, the initial vowel lapses, the noun passing from the "free" state to the state of "annexation": taserdunt, todda "the mule, she has gone": todda tsaroud on "the she-mule has gone". In numerous dialects (Morocco, Kabylia, Aures, etc.) the annexed state of the masculine noun also displays a prefixed w-, and hence the contrast: argaz : argaz > Chleuh argaz "man". Finally, contrary to the description given, some nouns retain their initial vowel in the annexed state, this "constancy" of the initial vowel may be explained (diachronically) by the disappearance of an old radical or be related (synchronically) to the structure of the schema. The opposition of state appears to be unknown to the Eastern dialects.

A third somewhat heteroclite group is formed by nouns beginning with a short consonant other than the feminine prefix t- or the Arabic article; some of them are perhaps historically connected with the previous category or with other strata of vocabulary. The series of "nouns of relationship" must be mentioned, remarkable both for their form and construction.

Adjectives generally show the same morphological characteristics as nouns.

d.—The personal pronouns. Several series of personal pronouns are distinguished according to form and use. The "isolated" pronouns enjoy more or less independent status in the text and may even constitute a complete utterance. The affixed pronouns of the verbs, of which they are the direct or indirect objects, have already been mentioned. Most prepositions take special personal pronouns, which also appear after the nouns of relationship: swar-i "the son of him, his son"; after a common noun, the pronoun is generally preceded by an element n(n)- which appears to be analogous to the preposition n- "of": Chleuh lqomtn nn-s "his house" (but Kabyle ahhám-is, same meaning); Berber has no possessive adjectives or pronouns. For every person, certain appropriate morphological elements are common to several or all of these pronominal series.

e.—The demonstrative elements. The demonstrative elements have a vowel base: a/w and t, which is found acting as a pronoun or acting as a determinative ("adjectival"). As a pronoun, this base appears particularly as the second member of the construction called "emphatic anticipation": Kabyle d-hyté a-d-yooman "it is thou who hast dyed it" (Basset-Picard), "it is thy having dyed it". As a determinative, it follows a noun or a demonstrative pronoun: Chleuh argas-a "this man", ay-a "this". This base frequently combines with other elements, especially with w- or t-, producing oppositions animate/inanimate and masculine/feminine: wafía : a "he/she : it", as well as with the particles of approach and withdrawal: Chleuh argas-ad "this man here" / argas-ann "that man there". The details of the system vary from dialect to dialect.

f.—The Berber sentence. The Berber sentence in the highest degree reflects all the characteristics of a spoken language. It constantly resorts to expressive procedures and in particular to "anticipation" (A. Basset), which may detach and place any element of the sentence at the beginning, ready to be reiterated as required by a personal pronoun. Of very frequent occurrence is "anticipation", of which an example has been given above (e). Subordination is relatively little developed and parataxis dominates, though it is not always possible to determine exactly the limits between the two types of construction.

Relative clauses have no formal indication other than — on occasion — the inflexions of the participle or the place of the satellites of the verb (cf. b); there is no relative pronoun; however, a tendency can be observed in many dialects to determine the antecedent by means of a demonstrative element, the use of which in such cases becomes more or less a matter of grammatical usage.

Nominal and verbal clauses are known to Berber. The former are frequently hinged on a particle d which may perhaps have some connection with the particle of approach: Kabyle nakk d-afellah "I am a peasant" (Basset-Picard). In verbal clauses the verb is normally placed at the beginning and is followed by its subject, except in the case of anticipation.

3.—The vocabulary. Vocabulary is perhaps the aspect of Berber which has roused the most lively curiosity, but produced the least exact studies. We have no statistical evaluation of the vocabulary. The dictionary of Foucauld for Ahaggar Touareg and that of Father Dallet for Kabyle, which may be taken as being very nearly exhaustive, contain respectively 1,400 and 3,500 verbs in the simple form. The vocabulary possesses a stock common to all dialects but, as A. Basset has stressed, the living form of each word should be separately studied. Another striking point, moreover, is the numerical importance of loan words, except in Touareg. We have seen that words furnished by Arabic have opened a breach in phonology and even in morphology. Berber, however, has shown proof of extraordinary powers of assimilation.

Vocabulary is, above all, concrete. Its richness and precision are remarkable wherever a vital activity is concerned (camel breeding among the Touaregs, irrigation in the Great Atlas, etc.). The language of intellectual and religious life is less well equipped and borrows extensively from Arabic. Some examples, however, reveal literary resources which wait only to be exploited.

VI. — LITERATURE AND ART.

As far back as one can go in the past, Barbary, “the land of conquest”, has never possessed any other language of civilisation than that of its foreign conquerors; thus, Berber writers have successively utilised, perhaps not Punic but at least Latin (Apuleius, Saint Augustine), Greek (?), Arabic (Ibn Khardun and many Moroccan writers) and now, above all, French. Yet there nevertheless exists a “Berber literature”, written and oral, which though not appearing in the inscriptions, does so in works of piety inspired by Arabic, in texts and stories set down at the request of European investigators, in the kdnuns (all of which taken together do not amount to much), and finally in folklore and poetry.

The Libyan inscriptions [cf. section V], in spite of the ardour with which their study has been approached, have not as yet delivered up the secret of their decipherment and Berber, as known to us, does not afford a satisfactory means of reading them. However, the Libyan alphabet, which the bilingual inscriptions have enabled us to establish, is relatively close to the only ancient system still in current use among the Berbers, the tifinagh (sing. tafinek < punica ?); this alphabet is used by the Touareg for engraving a few short inscriptions on rocks, bracelets or other objects, as well as for brief exchanges of love letters. This is an alphabetic script, writing only consonants in the body of words, but also vowels finally; no distinction is made between long and short sounds; individual words are not separated and one can write horizontally, vertically, from right to left or from left to right (or in boustrophedon), from top to bottom or from bottom to top. In practice, all texts are very short and the long ones appearing in A. Hanoteau, Essai de grammaire de la langue tamacheh, Paris 1860, were only written in tifinagh at the request of the investigator.

The following is a simplified table, according to Ch. de Foucauld, of the most usual forms of tifinagh (for further details and comparisons with the Libyan alphabet, see particularly A. Basset, Écritures libyque et touarègue, in Notices sur les caractères étrangers, by Ch. Fossey, Paris 1948).

Religious literature inspired by Arabic may be said to be represented by a few dozen works, very few of which have been published. These texts, transcribed in Arabic script with additional diacritical points, are intended for teaching the precepts of Islam and for the edification of the faithful; thus we possess an adaptation of the Mukhtasar of Khall, al-Haouj, edited and translated by Luciani (Algiers 1897), and
its complement, the Bahir al-Dumâ'ı, partially published by de Slane in his appendix to the Histoire des Berbères, iv, 552-62 (a complete ed.-trans. of this last text by B. H. Stricker is in the press). The "Kur'âns" of Hâ-Mîm and of Sâlih b. Taîrīf are, in a sense, related to these works, but they are, entirely lost, the same being true of the Berber text of three treatises composed in Tašâlīḥīt by Ibn Tûmârt. Of Khârijī literature, which was probably abundant, there remains the treatise of Ibn Ghânim entitled al-Mudawwana (cf. Motylinski, Le Manuscrit arabo-berbère de Zouagha, in Actes du XXIVe Congrès des Orient., Algiers 1909, ii, 64-78). A proportion of these religious works (particularly the Hâvâd and some others existing in manuscript form, cf. A. Roux, in Actes du XXIe Congrès des Orient., Paris 1949, 316-7) are in verse so as to be more easily memorised, but unfortunately they include a high proportion of Arabic words. To this type of literature belong religious poems, such as that of Sabî, which relates a young man's descent into Hell in search of his parents (R. Basset, Le poème de Çabi, Paris 1879, P. Galand-Perren, in Mémoires A. Basset, Paris 1957, 39-49), those of Sâlih Hâmmû (H. Stumme, Dich-kunst und Gedichte der Schlûk, Leipzig 1895; Johnston, Fadma Tagurramt, in Actes du XIVe Congrès des Orient., ii, 100-1; idem, The Songs of Sidi Hammou, London 1907; I. Justnard, Poètes en dual. du Sous marocain d'après un ms. arabo-berbère, in J. A., 1928), the legend of Joseph in verse (Loubignac, Dual. des Zaïân, Paris 1924-5, 359 sqq.), a story of the ascent of the Prophet and a version of the Burda of al-Bûsîrî (q.v.). To these may be added the translations of the Old and New Testaments made by Catholic and Protestant missionaries.

Secular works are rare; apart from Arabo-Berber glossoptaries and books of popular medicine which have practical interest, such writings as we possess were composed under the guidance of European scholars, as for example the The Narrative of Sidi Ibrahim on West Africa in Tašâlīḥīt (F. W. Newman, in J.R.A.S., 1848, 215-60; trans. R. Basset, Paris 1882, or the description of the Diabâl Nafûsa by al-Shâmînâkhî, in Nafûsî (ed. trans. Motylinski, Algiers 1885); to these may be added the collected works entitled Khâmil al-Šîkha (MS of the B.N. in Paris), which to a large extent appears to be borrowed from the Bahîyi yâd-nâma (q.v.) and the Hundred Nights (R. Basset, in Revue des traditions popul., 1891; extracts published by de Slane, de Rochemontez, R. Basset); to this category belong the ethnographical narratives and texts composed at the request of investigators who subsequently included them in their tribal studies or made independent collections of them, such as the Textes touareg en prose by Ch. de Foucauld, Algiers 1922. In this connexion it will not be without interest to note that the Fichier de documentation berbère, directed at Fort-National (Kabylia) by the Rev. Father Dallet, has been publishing since 1947 texts and even small plays composed in Berber, in addition to linguistic and ethnological documents.

As for the customary kânûmâ in use among certain Berber populations, very few of them have been published in the original language (as above section iv); the following may be mentioned: Ben Sedira, Cours de langue Kabyle, 293-355; Boulifa, Le Kanoun d'Adâni, in Recueil de mémoires ... XIVe Congrès Orient., Algiers 1905, 152-78.

Folk-lore is abundant, not to say rich. Marvellous and humorous tales, folk-tales, stories of animals, historical and religious legends are transmitted from generation to generation by the women, who are wont to tell them of an evening. It is this folklore that investigators have been able most easily to collect and few are their documents which do not contain some stories or riddles, without counting collections of folk-lore texts presented also as linguistic documents.

Finally, secular poetry, in spite of its appearance of primitive simplicity, is probably the most original literary production. The songs improvised collectively during the ritual dances (âbidâw), lullabies, funeral laments, and ritual chants contain a large share of real professional poets also exist among the Berbers, whose inspiration, generally speaking, is restricted to themes of love and war. In Morocco, the smdâz, a chant d'andyaz, the âidî berbère du groupe linguistique berbera, in Mém. H. Basset, Paris 1928, ii, 237-42) travell about the country and, like the troubadours, celebrate important events, sing the praises of likely patrons and discharge their arrows at those who disappoint them. Some poets, such as the Kabyle Mohand u Mohand and the Touareg poetess Dassin, have achieved a certain fame, local it is true and ephemeral, since their works remaining oral, are soon forgotten in countries where the rûwâd do not exist.

Berber art also is of no great account; the rock engravings and paintings are indeed far from lacking in quality, but one may well ask whether the artists who executed them are really the ancestors of the present day Berbers. In spite of the great architectural achievements to which we have referred (above, section iv), there is no real Berber art comparable to Arab and Hispano-Moorish art. The fact is that the Berber is a countryman, indeed a nomad, only seeking to possess articles of current use, which are easily transportable; his art, therefore, is limited to ornamenting articles of everyday life and does not transcend a craftsmanship seeking to provide the comforts of life rather than to delight the eye. Its products, sought at times by a clientele enamoured with exoticism and simplicity, and supported in North Africa by the efforts of the authorities to maintain and improve traditions and techniques, are restricted to carpets, hangings, mats, silks, embroideries, chinaware, earthenware, cabinet-work, work in gold, brass wares and damascene work; ornamentation is characterised by the almost exclusive use of the straight line (triangles, stripes, lozenges, checker-work). To this may be added very realistic statuettes in wood, which are at variance with the Islamic ban on the representation of the human form.

BERBERS — BERKE

BERGAMA, the ancient Pergamon in Asia on (on which cf. the data and references given in Pauly-Wissowa). Armenians who had fled before the Muslim raids into Asia Minor settled in Byzantine Pergamon during the course of the 7th century. The Byzantine emperor Philippikos (711-713) was of Armenian descent and came from Pergamon. Muslim forces under Maslama b. 'Abd al-Malik sacked the town in 716, but it was rebuilt and refortified after the Arabs had abandoned their attempt to take Constantinople in 717-718. Pergamon was included, from the reign of Leo III (717-741), in the theme of Thracis and, from the reign of Leo V (886-912), in the theme of Samos. The town suffered during the Turkish raids into western Asia Minor after the battle of Manzikert (1071). It continued, however, to be a prosperous and well fortified centre under the Byzantine emperors of the house of Komnenos and their immediate successors. Pergamon, having been hitherto a suffragan bishopric dependent on Ephesos, was raised to the status of a metropolitan see in the reign of Isaac Angelos (1185-1189). After the fall of Constantinople to the Fourth Crusade in 1204, the town was included in the Greek state of Nicea. Later, when the Turks overran western Asia Minor in the early 14th century, the town in 1226 was passed to Berke.

Like Batu, Berke, during the early years of his reign, seems to have exercised certain sovereign power: he was appointed his father's successor by Mongke but the succession was unexpectedly transferred to his cousin and possible son-in-law, Ulagh-Chin, while Berke was still a child. The young prince Ulagh-Chin, his son or brother, seems to have already become a Muslim at the time of Mongke's accession to the throne. The evidence of contemporary Russian sources shows that Ulagh-Chin is the same person as the Alexander of the Peking annals, and that he was a member of the direct line of Khwājam, the descendants of the great Seljuk city of Abydān. Thus, it is clear that Batu died according to Djuwayni while his son Sartak was on his way to the Court of the Great Khan. Sartak continued his journey and was assassinated at Herat in the year 1132/1133.

For a recent account of the Islamic monuments of Bergama, see: G. Bayath, Bergama Tarihinde Türk-Hilmi eserleri, Istanbul 1956. (V. J. PARRY)

BERKE, a Mongol prince and ruler of the Golden Horde, grandson of Chand-Khan and third son of Djići. Little is known of his early career. He took no part in the wars in Russia and Eastern Europe in the years 1242-1244 but was more frequently in Mongolia than Batu, whom he represented at the enthronement of Güyük (644/1246) and that of Möngke (649/1251). His yurt of appanage was originally situated in the direction of Darbān but by 655/1255 had been moved to the east of the Volga in order to cut off Berke from contact with his fellow Muslims. His conversion to Islam is mentioned by Rubruck, who says that he did not allow pork to be eaten in his yurt. The date of his conversion is unknown. Djuwayni's statement that he was brought up from infancy as a Muslim seems hardly credible. On the other hand he seems to have already become a Muslim at the time of Möngke's accession to the throne.

rights in Ma wara3 al-Nahr. According to Dijurdzhan he visited Buakhirā and showed great honour to the leading men of the town; he is also said to have ordered the Christians of Samarkand to be punished and their churches destroyed because of their behaviour towards their Muslim fellow townsmen. When the news of Möngke's death arrived (1259), the khutba was read in Berke's name not only in Ma wara3 al-Nahr but also in Khurāsān.

During the next four years (1260-1264) two brothers of the dead Great Khan, Kubilai and Aq Qaś, were engaged in a struggle for the throne. As the coins struck in Buakhirā show, the unsuccessful claimant Aq Qaś Bōke was recognised by Berke as the rightful heir. Prince Alughu, a grandson of Cāghatay, appeared in Central Asia about the same time, first as a representative of Aq Qaś Bōke and afterwards in open revolt against him; he succeeded in bringing under his sway not only the whole of his grandfather's appanage but also Khwārizm, which had always belonged to the kingdom of Djiōči and his successors; the governors and officials appointed by Berke were driven out of the towns. The massacre mentioned by Wāṣṣāf (Bombay ed., 51) of a division of Berke's army, 5,000 strong, in Buakhirā must have been carried out, not, as Wāṣṣāf himself says, by Kubilay, nor, as d'Ossian supposes, by Hūlegi, but by Alughu. The war between Berke and Alughu was continued until the latter's death; in the last years of his life, after the final defeat of Aq Qaś Bōke, Alughu's troops occupied and destroyed the town of Otrar. Berke, whose forces were engaged in the South and West, could do nothing against his enemies in the East, but he did not abandon his claims; Prince Kaydu, a grandson of Ogedey, who had fought under Aq Qaś Bōke, continued the war against Alughu after Aq Qaś Bōke's defeat and was supported by Berke.

The campaigns in the West against the Lithuanians and King Daniel of Galicia were of no great importance and were conducted by the frontier commanders without the personal intervention of Berke. King Daniel fled to Poland and Hungary and his son and brother were forced to dismantle the fortifications of all their main cities.

The war between Berke and his cousin Hūlegi, the conqueror of Persia, was more important and less successful. The causes of the war are variously given. Berke is pictured by some authorities as the defender of Islam and is said to have bitterly reproached Hūlegi for his devastation of so many Muslim countries and particularly for the execution of the Caliph Mustaṣsim. However those authorities who say that Djiōči's heirs felt their rights endangered by the foundation of a new Mongol kingdom in Persia are probably nearer the truth. Some of the territories incorporated in the new kingdom, such as Arrān and Aqgharbaydīyān, had already been trodden by 'the hoof of Tartar horse' in the reign of Cūgir-Kān and were therefore, according to the conqueror's directions, part of the appanage of Djiōči. The evidence on the war itself is contradictory. Hūlegi seems at first to have been victorious, advancing across the Terek (late in 1262), and then to have been defeated by Berke's forces (Berke not being present in person), losing a great part of his army in the retreat; many were drowned in the Terek when the ice gave way under their horses' hoofs.

Even before the outbreak of these hostilities the Egyptian Sultan Baybars [q.v.] had decided to enter into communication with Berke and form an alliance against their common enemy Hūlegi. A message to this effect had been sent from Cairo to Berke as early as 1262; on the 16th November 1262 an embassy was dispatched for the same purpose, and in the following year Berke's ambassadors were received by Baybars. The detention of Mongol and Egyptian envoys in Constantinople led to hostilities between the Golden Horde and Byzantium. Berke dispatched an army under Prince Nokay into Thrace, where they joined forces with the Bulgarians; and the Saltgjük Sultan Yız al-Dīn Kılık, who had been driven out of Asia Minor and placed in custody in the fortress of Ainos on the Aegean was set free and brought to the Crimea.

In 1265, the year of Hūlegi's death, the Klīq̲aḳ̲ and Persian Mongols were again at war. The two armies, under Berke and Abaka, for a long time faced each other across the Kur; in search of a crossing Berke proceeded upstream to Tiflis, where he died (1266); and his forces then withdrew.

Berke left no family, so that the throne passed to Batu's grandson Möngke-Temür. During the last years of his reign he was no longer, as Batu had been, second to the Great Khān in the Mongol Empire, but the ruler of an independent state, although this evolution was not completed till the reign of his successor, who was the first of the Klīq̲aḳ̲ Khāns. A message to strike coin in his own name. It is difficult to estimate how much Berke did as a Muslim to further the practice of Islam among his subjects. The Egyptian accounts speak of schools in which the youth was instructed in the Kurān; not only the Khān himself but each of his wives and Emīrs also had an mīmīn and a ma'laḏākhīn attached to their establishments; yet we learn from the same sources that all sorts of heathen customs were observed at the court of the Khān with the same strictness as in Mongolia. Not only Berke himself but several of his brothers are said to have adopted Islam; and yet half a century was to elapse after his death before Islam became definitely predominant in his kingdom.

Berke was the founder of New Saray (so called to distinguish it from the Saray founded by Batu), which was situated on the eastern bank of the Upper Akhtuba near the present-day Leninsk, about 30 miles east of Stalingrad.

Bibliography: As in the article on Batu. (W. BARTHOLD-[J. A. BOYLE])

BESERMYANS (or Glazov Tatars), a small ethnic unit skin to the Udmurts (Votyaks) living in North Russia. Differing views are held on the subject of their origin, some considering them as Finns who have come under Turkish influence, others as descendants of the old Kama Bulghars, profoundly influenced by the Udmurt language and culture. The Soviet census of 1926 listed 10,035 Besermyans, 9,195 of whom were from the districts of Balezino and Yukamenkoe in the autonomous Udmurt SSR, and 834 from the neighbourhood of the village of Slobodskoe at the confluence of the rivers Vyatka and Čeptza in the Kirov region. The Besermyans are bilingual, speaking Russian (in the Udmurt ASSR) and Kazan Tatar (in the Kirov region) as well as Udmurt much influenced by Tatar. The were converted officially to Christianity in the 17th century, and until the October revolution were considered fully Orthodox, but in fact they remained Muslims at heart, retaining many customs which are traditionally Islamic. Notably, they would call in the Tatar molla after the Orthodox priest when a death occurred.
After the proclamation of freedom of worship in 1905 the greater part of the Besermyans returned openly to Islam.

BESERMYANS — BESKESEK-ABAZA

Almost all the Tapanta had accepted Islam by the end of the 18th century, but the Shkarawa (the Tarn, Kizilbek, Bag, Cegrei and Misilbai tribes) emigrated to Turkey; 30,000 are officially stated to have left, but this estimate seems too low. After the Caucasian wars only 9,927 Abaza remained in the region (E. Felitsin, Cislovie dannie o gorskom i prostran musulmanskom naseleni Kubansko oblasti, in Sbornik Svedenii o Kavkaze Tiflis 1885, i, 67-94).

The conversion to Islam of the Abaza (who had formerly been animists or Christians) began after their migration towards the northern Caucasus, when they came into contact with the Caucasian Tatars and the Nogai. They took over the 'iddat and chronological system of these peoples (a twelve-year animal cycle), together with Sunni Islam of the Hanafi school. This conversion was slow, almost all the tribes south of the Kuban being still animist or Christian at the end of the 17th century (Huseyn Hazhurdin, cited by V. D. Smirnov, Kriticheskie Voprosy vnutrennego Otmanskoj sverkhvolya, St. Petersburg 1887, 347).

Ewliya Celebi affirms that the Biberdara, one of the most important Maza tribes, are not Muslims. Almost all the Tapanta had accepted Islam by the end of the 18th century, but the Shkarawas were still Christians when they were visited by P. S. Pallas, Islam being restricted to the nobility (Bemerkungen auf eine Reise durch die Staatskommisarisse des Russischen Reichs in den Jahren 1793 und 1794, Leipzig 1799, 365).

1926) live in the Circassian Autonomous region, the high valleys of the Great and Little Zelenchu, the Kuban and the Kama. Here there are thirteen villages, and there are two other Abaza villages near Kislovodsk in the Stavropoli Krai, as well as a few groups of Abaza in the Circassian and Nogai villages in the Adlghe Autonomous Region.

The Abaza are descended from the multilingual tribes which at the beginning of our era dwelt on the shores of the Black Sea, north-west of present-day Abkhazia, and which fused together in the course of the centuries to form the Abkhaz national unit.

In the 14th and 15th centuries most of the Abaza left their original home in the coastal region (between Tuapse and Bzbf), crossed the Caucasus, and dislodging the Kabardians settled in the area they now inhabit. From that time onward they had to contend with the hostility of the Circassians, and their history is one of slow but continuous decline. At the end of the 16th century the Abaza tribes which had formerly dominated the region accepted the rule of the Kabardian and Beslemei princes. At this time too (in the reign of Sultan Murad III) the Turks extended their protectorate over eastern Caucasus but by the treaty of Belgrade relinquished Kabardia, which was recognised as an independent territory. The Turkish frontier then ran along the Kaban, and the Tapanta who were leading a nomadic existence on both banks of this river became independent, no longer owing any clearly defined allegiance. After the treaty of Küçük-Kaynardjia (1774) the Russians occupied Kabardia, and in 1802 the greater part of the territory of the Abaza was combined with that of the Nogai in a special presidio administered directly by the Russian authorities. During the Caucasian wars the Abaza were divided in their allegiance, the Tapanta allying themselves with the Russians while the Shkarawa supported the Muriid cause. After the Russian conquest, which took place between 1858 and 1864, the majority of the Shkarawa (the Tam, Kizilbek, Bag, Cegrei and Mislba tribes) emigrated to Turkey; 30,000 were officially stated to have left, but this estimate seems too low. After the Caucasian wars only 9,927 Abaza remained in the region (E. Felitsin, Cislove dannie o gorskom i prostran musulmanskom naseleni Kubanskij oblasti, in Sbornik Svedenii o Kavkaze Tiflis 1885, i, 87-94).

The conversion to Islam of the Abaza (who had formerly been animists or Christians) began after their migration towards the northern Caucasus, when they came into contact with the Caucasian Tatars and the Nogai. They took over the 'iddat and chronological system of these peoples (a twelve-year animal cycle), together with Sunni Islam of the Hanafi school. This conversion was slow, almost all the tribes south of the Kuban being still animist or Christian at the end of the 17th century (Huseyn Hazhurdin, cited by V. D. Smirnov, Kriticheskie Voprosy vnutrennego Otmanskoj sverkhvolya, St. Petersburg 1887, 347).

Ewliya Celebi affirms that the Biberdara, one of the most important Maza tribes, are not Muslims. Almost all the Tapanta had accepted Islam by the end of the 18th century, but the Shkarawas were still Christians when they were visited by P. S. Pallas, Islam being restricted to the nobility (Bemerkungen auf eine Reise durch die Staatskommisarisse des Russischen Reichs in den Jahren 1793 und 1794, Leipzig 1799, 365). At the
same period J. Reineggs ([Allgemeine historisch-topographische Beschreibung des Kaukasus, Gotha-St. Petersburg 1796, 273) states that the Tam, Ceresi, and Barakali tribes of the Shkawara group were "enemies of Islam". In 1807, J. Klaproth (Reise in den Kaukasus und nach Georgien, i, Halle-Berlin 1812, 459) found that the Tam were islamised but "ate pork", and this is confirmed by the anonymous author of the article Gorskie pliema livichkie za Kuban’yu in Kaukas no. 94, 1850, who describes the Tam as "very lukewarm Muslims", the Ceresi as "setting small store by Islamic ritual, apart from certain of the nobility", the Bag (a tribe of the same group) as "without precise beliefs" and the Barakali as partially converted to Islam. Thus it seems that the final conversion of the Shkawara dates only from the middle of the 19th century, effected by the missionary zeal of Muhammad Amln, the Nâd ibî of Shâmîl (q.v.) in Circassian territory.

Until the beginning of the 20th century Abaza society retained its very complex feudal structure, which was similar to that of the Circassians. At the bottom of the social scale were the slaves, unauat (anauat among the Circassians). Then came the serfs, 1lg (grîla among the Shkarawa), and the freed serfs, azat-îlg, who remained under the obligation to perform certain tasks but could none the less change their master and themselves own unauat and ìlg. Above these was the most numerous class, that of the free peasants, ahand (or 2’lhabashaw). Next were the nobles, divided into "small nobles", amîlstâ, who made up the princes retinues, and the "great nobles", amîlstâd (lwasd among the Shkarawa) who could retainers of their own. At the top of the scale were the "princes" who were heads of clans, âkha, and vassals of the Beskenei and Kabardian princes. They took Azat-Ug among the Circassian princely class (phsa) but in the lower class of telkotesh. The children of the âkha and women of a lower class made up a special class, tuma.

Until the October revolution and even during the first years of the Soviet regime the Abaza still retained certain patriarchal and feudal customs (clan divisions, vendettas, kâlym, wâlîkh, etc.).

Language and literature

The Abaza language belongs to the Abkhazo-Adyghe division of the Ibero-Caucasian languages. It is so close to Abkhaz that it is sometimes taken as simply a dialect of this tongue, but it shows numerous Kabardian features. There are two dialects: Aghkara in the south, with two sub-dialects, that of the Apsua Aul and that of Staro and Novo-Kuvinskoe, and in the north Tapanata, comprising likewise the two sub-dialects of Kubina-EIPburgan and Pelt-Krasno-Vostochnoe. Abaza was an unwritten language until the October revolution. In 1932 a modified Roman alphabet was devised for it and a page in the language added to Cerkes K’âráf, the Cerkess Adyghe daily. In 1939 the Roman alphabet was replaced by Cyrillic, and in this new script the first works by Abaza writers have appeared, from 1940 onwards (collections of poems by Tsekov and Tkhaitsakho, the short stories and novelettes of Zirov and Tabulov, etc.).

BESLENEY (see Čerkes).

BESNI (Besnesi in the Middle Ages), from the Syriac Bet Besniä, a crossroads settlement at a height of more than 2,900 feet on the important junction of the Malaya-Aleppe and (Cilicia), Marâsh-Diyâr Bakr roads. Besni was the hinge between the series of strongholds north of the great bow of the Euphrates on the one hand, which protected the upper valleys of the right bank tributaries of this river from incursion from the plateau’s and high ranges of the eastern Taurus, and on the other those towards the south, which dominated the small basins north of ’Aynâb. Further it was in the immediate vicinity of a pass which led down towards the north-west to the gorge of the Al-Su, the site of the old strong-hold of Ḥadath the Red. Despite these advantages and the ancient etymology of its name, Besni is not mentioned in texts until after the destruction of Ḥadath, whose place it then took (4th/10th century). Formerly it had been overshadowed by Ɨyysûn, its southern neighbour, which was then more important and was itself linked predominantly with Mar'âsh. Besni probably owed its rise to an influx of Armenians after the Byzantine conquest. At the end of the 5th/11th century it was part of the principalities of Philarêt and Kogb-Vasli, and during the period of the Crusades was one of the most frequently mentioned places in the Franco-Armenian province of Edessa. It was fought for by the Zengid or Ayyubid princes of Aleppo and the Saljûkïds of Rûm, who in the 7th/13th century incorporated it into their border province of Mar’âsh. The Mongols ceded it to the Armenian kingdom of Cilicia, but it was almost at once annexed by the Mamlûk state, with whose fortunes it was linked until the end of the 8th/14th century. It then came within the sphere of operations of the Dhu ’l-ghadîr Turcomans, was pillaged by Timûr, passed again at the end of the 13th century into Mamlûk control, and in 922/1516 was occupied by the Ottomans together with Syria. From that time on it has had no more than local importance. The town, in which a fortress largely rebuilt by Kâîthây is still standing, had a population of 10,500 in 1955.

Bibliography: Besni is mentioned by all the chroniclers of the period of the Crusades, in particular by Matthew of Edessa, Michael the Syrian, and Kamâl al-Dîn b. al-‘Adîm. The last-mentioned gives a note on it in the geographical section of his Bughya (Aya Sofya 3036, i, 333), and likewise ’Izz al-Dîn b. Shaddâd in his Nâdib (= Ibn al-Shihna, ed. Cheiko, 171). Of the Mamlûk chroniclers see especially Ibn Kâbir, Ibn Ḥâdîd, Mahmûd Makrizî, al-Aynî, Ibn Taghrîbdî, Ibn Ɨyâs. In the modern period, particularly Alnsworth, Travels,
BESNI — BEYSHEHIR

BEYLIK, (Beği), a term formed by joining the adjective and relative suffix bık to bey (beg, beg) which was an old Turkish title [see BEG]. The word bey is said to correspond to the Arabic amir, and beylik to imara. The term beylik thus denotes both the title and post (or function) of a Bey, and the territory (domain) under the rule of a Bey. Later, by extension, it came to mean also "state, government",
BEYSHEHIR — BHARATPUR

BEZÊTA [see Dido].

BEZÎSTÂN [see KAYSARÎYVA].

BEZOAR [see BAZAHK].

BEZM-I ÂLEM [see WÂLIDE SULTAN].

BHAKCAR, a fortress situated on a limestone rock in the middle of the river Indus (27° 43’ N. and 68° 36’ E), which is identified with the Sogdi of the ancient Arab citadel of al-Mansûra). The name has been fortified and garrisoned at a very early date; as the local tradition goes, whence it was conquered by Babur, who had sent an ultimatum to the governor, Nusrat Khan, lying in 614/1227 by the troops of the governor, Nusrat Khan, who compiled the Ta’rikh-i Akbarî, trans. Gladwin ii, 112; J. N. Sarkar, History of Sind, Karachi 1950, 56-7; Jour. Bombay Br. RAS xxxiv, 144; J. N. Sarkar, History of Afghanistan, 1, 119-20; James Todd, The Antiquities and Annals of Rajasthan, London/New York 1914, 250; ‘Alî b. ‘Abd al-Hamîd Khân, The Towns of Pakistan, Karachi 1950, 56-7; Calnma (Sindhi ed.) Karachi, 1935, 287, 289, 420, 497; Oriental College Magazine, Lahore 1937, 74-6; Djuwaynî, ii, 146; Storey’s ii, 948-9. (A. S. BAZMEE ANSARî)

BHARATPUR, formerly a princely State in India, now forming a part of Rajasthan, lying between 26° 43’ and 27° 50’ N. and 76° 35’ and 77° 46’ E. with an area of 1,982 sq. miles. The chief city is Bharatpur, situated in 27° 15’ N. and 77° 30’ E., 34 miles from Agra, with a population of 37,321 in 1951. Paharsar, 14 miles from Bharatpur, was first conquered in the 5th/11th century by the troops of Mahmûd of Ghazna, under the Sayyid brothers, Džalî al-Dîn and ‘Alî al-Dîn, who claimed descent from Imam Džafar al-Sâdjîk, in about 3 hours, as the local tradition goes, whence the place derives its name pahar (3 hrs.) sar (conquered). At the close of the 6th/12th century it passed into the hands of Mu’tiz al-Dîn b. Sâm also known as Shihab al-Dîn Muhammad Ghuri, and remained under the rule of different dynasties till it was conquered by Bâbûr, who had sent an ulti-
matum, in verse, to the Mir of Bayana, 34 miles from Bharatpur, beginning bā Türk satizah maqṣūn ay Mīr-i Bayana. It remained thereafter under the Mughals. An attempt by Birāi, the founder of the State of Bharatpur, at independence towards the close of the reign of Awrangzib was thwarted by the Imperial army killing Birāi in action. During the reign of Farruĥšīyār (1123-31/1713-18) Cūrāmān Ḍīnjūv ravaged the area and closed the roads to Delhi and Agra. In 1132/1718 a strong expeditionary force under Sāwādī Dīnjūv Singh, the chief of Ḍīnjūvpur, was sent to punish him but the Sayyid king-makers who were opposed to Muhammad Shāh, king of Delhi, made peace with the Ḍīnjūv directly. In 1135/1722 Badan Singh, the successor of Cūrāmān, was proclaimed full Šāhī of Bharatpur on the condition of paying tribute to the Emperor. In 1160/1753 his son, Sūrāji Māl, gained so much strength as to attack the Imperial capital and indulge in pillage and plunder. Shāh ʿAbd al-ʿĀzīz al-Dīljāwī (q.v.) had, in several of his letters, lamented the atrocities committed by the Ḍīnjūv on the residents of Delhi.

The present city and the mud-fort of Bharatpur are said to have been founded about 1146/1733. The British, under Lord Lake, made an unsuccessful attack on this fort in 1220/1805; it was, however, captured by Lord Combermere in 1242/1826.

(A. S. Bāzmī Ansārī)

**Bharāwch.** A district in Gudjārāt [q.v.] in the present Bombay State, India, of about 1450 sq.m. and with a population of some 300,000; the Islamic population was about 20% of the total prior to partition in 1947. Although this has since moved to Sind in Pakistan. The principal town of Muslims was Bohārah [see 1109014859]. Bharāwch is also the name of the principal town of that district, Lat. 23°42′ N., Long. 73°5′ E. It is first known as a town within the Mawrya dominions, and later (c. 150 A.D.) to have been in the hands of Parthian Sāhas; from the Middle Indian form bhuṛavaccha of the Sanskrit bhūryukṣa- it was known to the Greeks as βάρυκα, a seaport from which the Red Sea commerce was carried on (Ptolemy, *Geog.* VII, i, 63; VIII, 21, 12) and as the head of an important trade-route into India (*Periplus*, §§ 47-48). Held by Rādūpūrī and Gūrdjās, probably as tributaries of the Cālukya, it suffered Arab invasions in 15/536, 99/717, and 154/770. It was held by Rāstākrātus in the 3rd/4th and 4th/10th centuries until reconquered by the Cālukya; from them it was taken in 698/1298 by ʿUglā Khān, brother of the Sultan ʿAlī al-Dīn Khālūdī, by whom Hindu and Jāytu temples were destroyed (Briggs, *Ferishta*, i, 327). It was under a succession of Muslim governors representing the Delhi sultāns until 798/1396, when Muhammad Zāfār Khān (governor from 793/1391) assumed his independence. From then it continued subject to the Ahmad Shāh kings [q.v.] until annexed by Akbār in 980/1572. In 1149/1736 ʿAbd Allāh Beg received from Niṣām al-Mulk (independent from 1135/1722, who previously as governor of Gudjārāt had made Bharāwch part of his private estate) the title of Nik ʿAlī Khān, and was the founder of the line of Nawāwds of Bharāwch. In 1186/1772 Bharāwch was captured by the British—whence its Anglo-Indian name of Broach.

**Buildings.**—The old fortifications were rebuilt by Bahādur Shāh 932-43/1526-37. In 1071/1660 they were partially razed by Awrangzīb, but rebuilt on his orders in 1097/1685 as a protection against the Mahrattas. They are now in a very dilapidated condition. The Dāmān Maqṣūd, c. 700/1302, is of great significance in the development of Islamic architecture in Gudjārāt: the earliest buildings at Pātaū were mere adaptations of existing Hindū and Śiṅya structures, whereas here a original and conventionally planned mosque is composed of former temple materials, the enclosure walls, of temple stones specially recut, being thus the earliest examples of independent Islamic masonry in Gudjārāt. The Dāmān is an open colonnade, three compartments of which are three temple sanctuaries, erected intact, except for the removal of the Hindū animal figures, with 48 elaborately carved pillars; the three mihrbāns are intact temple niches with pointed arches added under the lintels. The liwān roof, with three large and 10 small domes, houses elaborate coffered ceilings removed from temples; the designs of these, though Hindū, were conventional in character, and were perpetuated in later Gudjārāt Islamic buildings. It appears that the whole production was the work of local Hindū artisans working under the direction of Muslim overseers.

**Bibliography:** For the history see article *Gudjārāt*, *Bombay Gazetteer*, ii, 1877, 337-369. For a full description of the Dāmān Maqṣūd, J. Burgess, *On the Muhammadan architecture of Bharōch ... in Gudjārāt*, ASWI VI (= ASI, NIS XXIII), London 1896.

**Bāḥṭī** the Pandjāb form of the Rajput word Ḍhāti, the name of a widely distributed Rajput tribe associated with the area stretching from Jaisalmer to the western tract of the Pandjāb between Paṭhābād and Bhatnāir. Large numbers of those settled in the Pandjāb accepted Islam. According to one of their traditions the Ḍhāns of Jaisalmer were driven from Zabūlūstān and Bāḥṭī to the Pandjāb and Rādūpūtnā, the branch settling in Rādūpūtnā being named Bāḥṭī. The references in the *Catnāma* to the Bāḥṭī king of Ramal in the Thar desert confirm the legends preserved in Tod’s *Annals and antiquities of Rajasthān*, i, Madras 1873. They are also mentioned in Afīfī’s Taʿrīkh-i Pirās Shāhī (*Bih. Indica*, 30-39). The widespread nature of their settlements is recorded in the *Ālmā* where Abu ʿl-Fadl reserves the form Bāḥṭī for those settled in Sihrínd, MūJTān and Rādūpūṭ.
country was practically uninhabited. Known as Vikramgarh in the pre-Islamic period, it figures in early Indo-Muslim chronicles like the Tabakht-i Nāṣīrī and the Tādī al-Maʿmūdī of Ḥāfiz Sīrājī (Panjab Univ. Lib. MS.) as Tabarhinda (تبارحیند), a corrupt form of the correct name Bhattinda (بختیند), due apparently to the transposition of the dots of the letters bā and ta. Murtadā al-Zabīdī is nearer the truth when he says that al-Bīrānda (Tādī al-ʿArūs, ix, 212) is "a city in India". This place-name is generally found written as Bhattinda in all earlier Persian chronicles and hagiographical works (e.g., Bābur-nāma, Eng. translation by A. S. Beveridge, i, 383). In the Tābakht-i Nāṣīrī (ed. ʿAbd al-Ḥāyy Ḥabībī, Quetta 1949, i, 537) Bhattinda is wrongly called Sirhind because no hills exist in the vicinity of this town. The existence of a dense jungle, thirty miles from Bhattinda, in the direction of Sirhind, is, however, proved by a statement in the Mafiṣūdī-t i Timārī (Elliot and Dowson, iii, 427). This jungle served as the favourite leopard hunting-ground for Akbar (A. S. Beveridge, Eng. transl. Blochmann, i, 286). As to the predominance of Bhattinda in and around Bhattinda, there is more than ample evidence (Imp. Gazetteer of India, n. ed., viii, 91). Cunningham's etymology of the name Bhattinda (see Bībī) based on mere conjecture is erroneous and wide of the mark.

It was conquered by Māḥmūd of Ghazna in 395/1005 when the Rādāq of Bhattinda (Bhātīyā), Bīdījān Rāy, unable to resist the besiegers, fled from the fort, and committed suicide. There has been some controversy as to the identification of Bhātīyā (Bhātīyā) mentioned by al-ʿUṭbī (Ṭabākht-i Yamini, Lahore 1300/1882, 209 ff.). Mūhammad Nāẓīm positively asserts (The Life and Times of Sultan Māḥmūd of Ghazna, Cambridge 1931, 197-203) that it was Bhātīyā and not Bhattinda as we now know the place, called Hātīyā, still exists in the neighbourhood of Rawalpindī, which also answers the description, given by al-ʿUṭbī, to some extent. Unless, however, more conclusive evidence is forthcoming Mūhammad Nāẓīm's view must prevail. Al-ʿUṭbī (p. 209) gives vivid a description of the lofty city-wall and the fortifications of Bhātīyā as they existed in the time of Māḥmūd. The victory of Sultan Māḥmūd also incidentally marks the introduction of Islam in Bhattīnā and the Sāmānī-Ambālā-Hiṣār region of India.

It was conquered by Muʿīz al-Dīn Mūhammad b. Sām, also known as Shihāb al-Dīn Muḥammad Ghūrī, in 587/1191. After the withdrawal of Muḥammad Ghūrī to Ghazna, his commandant at Bhātīyā, Mālik Diyā al-Dīn Tūlākī, was attacked by Rāy Pithorā (Pethivirāḍā) who laid a siege to the fort and continued it for 13 months. Ultimately the Muslim command made peace with the enemy and surrendered the fort. It was captured by Nāṣīr al-Dīn Kabāčā after the death of Kūṭb al-Dīn Aybak in 607/1210. Thereafter, it remained in the possession of the Slave kings. In 657/1259 Malik Igraṭyār al-Dīn Aḥfūnī, the commandant of Bhātīyā, rose in revolt, killed Yākūt the Abyssinian and took Rādāḍiyā Suṭānā (g.v.) a prisoner, who was lodged in the fort where he married her. They were, however, killed by the Hindus while on their way to Delhi from Bhattinda. The fort was captured by Nāṣīr al-Dīn Māḥmūd in 657/1253 and Malik Shīr Khān was appointed its commandant.

Very little is heard of the town thereafter. It must have decayed and lost its importance, although its fort has, throughout, been famous both for strength and impregnability. Strangely enough it finds no mention in the Memoirs of Bābur. Akbar, as already stated, used to hunt leopards in the purgana of Bhattinda. His guardian Bayram Khān [g.v.], after his disgrace, lodged his family in this fort before proceeding to Dūlīndūr [g.v.]. He was defeated in a decisive action with the Imperial troops, he suffered an ignominious defeat. It then completely fades out of history and only reappears in 1168/1754 when it was conquered by Ālā Sing, the Patīlā chieftain, whose descendants held it till the merger of their territory with the Indian Union in 1956. The modern fort is 118 ft. high, with 36 bastions. It dominates the town, a thriving centre of trade and commerce, and is visible for several miles around. In the time of Sūltān Māḥmūd, it had a deep and wide moat, which great conqueror ordered to be filled up with stones and trees before storming the fort. The ditch still exists partly filled up with the refuse and debris of the town, which is dumped here. The fort is now mouldering rapidly and serious cracks have also appeared in the arches of the main gate. Its two massive minarets collapsed in 1958.

Bābā Ḥādīdī Rātān [see Ratan], said to have been born in the pre-Islamic era and to have later visited the Prophet, was a native of this place.

written in a pure form of eighteenth century Sindhi and are remarkable for the manner in which philo-

sophic and religious use is made of the folk tales of the Sind countryside. The poems deal with the
longings of unrequited love and the need for trust in the power, wisdom and compassion of Allah.

Their deep mystical character has endeared them to the simple rural folk of Sind. It is noteworthy that their appeal has been as much to the Hindus of Sind as to the Muslims. The reason is perhaps due to the fact that the bulk of the indigenous Sindhi population is Hindu in origin, as many of the personal names testify, and the poet himself was deeply interested in the mystical contemplation of faṭrā, sanyas and yogis, which in turn found an echo in the Sikh religion followed by most of the caste Hindus living in Sind till the partition of India in 1947 resulted in their precipitate flight therefrom. The poems of the Rīsalā which are lyrical in type are sung to well-known Indian music and many of them, such as the Sur Āsā and the Sur Bilawāl, proclaim a sublime form of devotion. The folk stories on the other hand make direct appeal to the childlike simplicity common to uneducated people. The love tales of Sasui and Punhun, of Suhinī and Mear, and of Lilān and Chanesar are sung at the cradles of Sindhi children today. A vast literature in Sindhi on the poet and his message has been evoked by the poet's achievement and the rasada of Shāh ‘Abd al-Latīf is the scene of regular pilgrimages of devotees who listen today to the recitation and singing of his verses. There have been learned studies of Shāh ‘Abd al-Latīf's life and work by three Sindhi scholars of distinction, namely the late Shams al-‘Ulmā Mīr Dālī Kalīch Beg, the late Professor H. M. Gurbuxani and the late Shams al-‘Ulmā M. Da‘uddota, whose works may be consulted by those interested. (H. T. SORLEY)

BHĪTĀ'ī — BHŌPĀL xi95

BHŌPĀL, formerly a princely State in India, lying between 22° 20' and 23° 54' N. and 76° 28' and 78° 51' E. with an area of 6,678 sq. miles, with a population of 838,474 in 1951. It was the second most important Muslim State, next to Haydarābād [q.v.].

Bhopāl was founded by a military adventurer, Dōst Muhammad Khān, a native of Tirāh (in the tribal area of present-day Pakistan) who belonged to the Mīrzā Kalīkh tribe of the Āridī Pathans. In 1220/1708 he went to Delhi, at the age of 34, in search of employment, and succeeded in obtaining from Bahādur Shāh I [q.v.], emperor of Delhi, the lease of Bārāsia pargana, partly in recognition of his military services and partly through his own efforts. A man of exceptional courage and outstanding military skill, he soon extended his sway over a large area and founded the town of Bhopāl with its citadel, which he named Fatghar. Taking advantage of the enfeoffment of the central Mughal authority, he broke loose and assumed the title of Nawwāb. He died in 1233/1710 and was succeeded by his minor son Muhammad Khān, who was soon afterwards ousted by Yār Muhammad Khān, a natural son of Dōst Muhammad Khān. The latter died in 1236/1724, but was formally installed Nawwāb and was succeeded by Fayyād Muhammad Khān, a pious man and almost a recluse, whose weakness as a ruler, combined with the political chicanery of his Hindu minister, resulted in half of the Bhopāl territory being lost to the Peshwā, Bādīī Rāo I. On his death in 1252/1737 he was succeeded by his brother, Hayāt Muhammad Khān who, strangely enough, adopted four Hindu boys as his īdās, two of whom, Fīlād Khān and Chōṭā Khān, later became ministers. Rivalry between Wazīr Muhammad Khān, a cousin of the ruler and Mūrid Muhammad Khān, his minister, was responsible for surrendering the fort of Fatghar to Amīr Khān Pindārī (the founder of the former Tōnk [q.v.] State who was then in the service of the Sindhī of Gwālīr. Wazīr Muhammad Khān had to leave Bhopāl but on Sindhī’s repairing to Gwālīr, where disturbances had broken out, he returned with a sizable force and expelled the Marathas, under Amīr Khān, from the fort and after sometime also drove out the Pindārs. In 1253/1738 Hayāt Muhammad Khān died and Wazīr Muhammad, who had proved his capability as a ruler, succeeded him to the principality, setting aside the claim of Gwāh Muhammad Khān, son of the deposed ruler. In 1259/1743 the combined forces of Nāgpūr and Gwālīr marched on Bhopāl, which resisted the invaders heroically for eight long months and the unsuccessful siege had to be lifted.

On the death of Wazīr Muhammad Khān in 1252/1716, his son and the son-in-law Gwāh Muhammad Khān, Nadhr Muhammad, succeeded him. He entered into a treaty with the British, the obligations of which he faithfully observed. This treaty guaranteed to him and his descendants the territories of Bhopāl, while the British were assured the services of native troops for exterminating the Pindārs, who were then over-running Central India and were no more than organised bandits. Nadhr Muhammad was married to Kudsiyya Bégām, a daughter of Gwāh Muhammad, who assumed the reins of power after the death of her husband in 1256/1830, as regent on behalf of her minor daughter, Sikandar Bégām, whose formal accession took place 25 years later in 1261/1845. From this lady begins the long and illustrious chain of the Bégāms of Bhopāl, which ended up with the voluntary abdi-
cation of Sultan Dīshān Bégām in 1345/1926, in favour of her son, Hamīd Allāh Khān (the last feudatory ruler of Bhopāl) and her subsequent death in 1348/1930.

Sikandar Bégām, owing to the delaying tactics of her mother, who wanted to retain power in her own hands, was married very late in 1251/1837 to Dīshān Muhammad Khān, a nephew of Nadhr Muhammad Khān. Kudsiyya Bégām, still reluctant to part with power, instigated a civil war in which Nadhr Muhammad was defeated by the combined troops of the Dowager-Bégām and his own wife. In 1253/1837 the authorities of the East India Company interfered and restored the administration of the State to Dīshān Muhammad Khān. Kudsiyya Bégām, baulked of her wishes, had to retire on pension. She lived long thereafter but was scrupu-

ously kept out of the picture by her successors, Sikandar Bégām and her daughter Shāhīdjahān Bégām, whose husband Siddīk Hasan Khān, for personal and public reasons, did not allow the old Bégām even to attend social functions held by the ruling family. She died in 1299/1881 and held a dāndīr of Rs. 498,682 since her retirement from political life until her death. The rule of Sikandar Bégām is remarkable for a number of military reforms which forged the irregular Bhopāl troops into a fine well-knit force. The State remained loyal to the suzerain British power during the upheaval of 1857 in spite of the refractory conduct of a few of the nobles. She also introduced agricultural, economic, administrative and legal reforms. Although the head of a Muslim State, she was bold enough to do away with the pardah and appear in public attired in military accoutrements. At the same time
she was of a religious bent of mind and performed the Hadjdj in 1280/1863-4. After a rule of 23 years, she died in 1285/1868 and was succeeded by her minor daughter Shakhir Begam, under the regency of Fawjdjar Muhammd Khan, an uncle of Sikandar Begam. In 1263/1847 he had to resign, chiefly because of the machinations of Kusdiyya Begam, and Sikandar Begam was appointed regent. In 1272/1855 Shakhir Begam married Bakhshii Balki Muhammd Khan, who did not belong to the ruling house. He, therefore, as subsequently all the husbands of the Begams of Bhopal, enjoyed only the status of a Nawwab-Consort and had nothing effective to do with the administration of the State, the entire power having been delegated to Sikandar Begam, a woman jealous of her status and dignity. She strongly objected to the recognition of her minor daughter as ruler and could only be appeased by Shakhir Begam's voluntarily giving up all claim to rule during the life-time of her mother; an act of filial attachment rather than of expediency or political sagacity.

In 1285/1868, her husband having died a year earlier, Shakhir Begam was formally installed as the ruler. Three years later she remarried, taking a mawlawi of Kannawdi, Sayyid Siddik Hasan [q.v.], once a petty official of the State, as her husband. Through the efforts of the Begam the honorary title of Nawwab and other insignia of office were conferred on Siddik Hasan Khan as the consort of the ruler. She had discarded the pardah after the death of her first husband but again retired on her marriage with the mawlawi, whose learning and ability always overawed her. Her second marriage met with a mixed reception, the entire ruling family strongly disapproving it. The heir-apparent Sultan Dja‘han Begam, was full of bitterness and her memoirs depict Siddik Hasan Khan as an unscrupulous upstart, a tyrant who robbed her and her mother of all happiness, threatening the latter with divorce, a great stigma for a lady of high birth, if she went against his wishes. She also holds him responsible for the estrangement between her and her mother and the grand old lady Kusdiyya Begam. His disgrace in 1303/1885, due to his objectionable writings, came as a shock to the Begam but she had to bow before the decision of the British Government. Siddik Hasan Khan died in 1308/1890, to the great relief of Sultan Dja‘han Begam and others, but the relations between the ruler and the heir-apparent showed no improvement. The real cause, it appears, of the estrangement between mother and daughter was the latter's husband, Ahmad ʿAli Khan Sultan Dlhan Khán, with whom the ruler, for unknown reasons, was never entirely happy, although it was she who had selected him as her son-in-law out of some twelve suitors.

In 1319/1901 Shakhir Begam died of cancer and, in accordance with the sanad issued in 1279/1862 by Lord Canning, Governor-General and Viceroy of India, was succeeded by Sultan Dja‘han Begam, her only child by her first husband. She had no issue from Siddik Hasan Khan. Sultan Dja‘han, during 25 years of rule, personally directed the administration of the State and carried out a number of reforms. She paid two visits to England, first in 1329/1911 to take part in the coronation ceremonies of King George V (1911-1936), and then in 1344/1925 to get the succession of her youngest and surviving son, al-Ḥādid Hamidallah Khan, recognised by the British Government. Her two other sons, Muhammad Nasr Allah Khán (b. 1293/1876) and Háṣīf Ubayd Allah Khán (b. 1294/1877) both died, in quick succession, in 1343/1924. It was suspected that they had been poisoned, but the political sagacity of Sultan Dja‘han averted a crisis. The late Ağha Khán also played an important part in securing the rulership of Bhopal for Hamid Allah Khan, who thus superseded the sons of his two dead brothers. Born in 1312/1894 Hamid Allah Khan was educated at ‘Alligarh and took an active part in politics insofar as the native princes were concerned. On two occasions (1931-2, 1944-7) he was elected Chancellor of the Chamber of Princes and in that capacity rendered yeoman service to the cause of his brother-princes. In 1366/1946 he played a memorable rôle in Indian politics, acting as an intermediary between the Indian National Congress and the Muslim League, led by Muhammad ʿAli Djinna [q.v.], when he was able to secure a carte blanche from the Congress in favour of the Muslim League. This was, however, later repudiated by M. K. Gandhi, the undisputed leader of the Congress.

On the lapse of British paramountcy in 1947, when India and Pakistan became two independent States, Bhopal was first treated as a centrally-administered area but in 1949 was merged with the Indian Union. It had an elected legislature and a ministry with a Chief Commissioner as the constitutional head of the administration. The ex-Nawwáh, now no more than an ordinary citizen, has since been pensioned off and is entitled to a privy purse of 1,00,000 rupees a year of which 100,000 rupees was allocated to the heir-apparent, Gauhar-i Táddi ʿAbidà Sultan who has since migrated to Pakistan and settled permanently there.

BHOPAL (GVR), Capital of the Indian province of Madhya Pradesh, situated in 23° 16' N. and 77° 25' E. on a sandstone ridge and on the edge of two
BHOPAL — BIBLIOGRAPHY

beautiful lakes, the Pukhtah-Pul Talao and the Bara Talao, famed throughout India for natural charm and picturesque surroundings, was founded by Dost Muhammad Khan, an Orakza'i Afridi in 1141/1728 when he built the Fat'ghah fort, named after his Indian wife, Fatih Bithi, and connected it by a wall to the old dilapidated fort, ascribed by tradition to the legendary Rudjia Bhodj, after whom a quarter of the city is still called Bhojpur. The population in 1951 was 120,333. The city is divided into two parts, the Sahar-i Khan, enclosed by a wall built by Dost Muhammad, and the modern quarters and suburbs, Dhamangrabad and Ahmadabad, added by the succeeding rulers to perpetuate the memory of Dha'angir Muhammad Khan, husband of Sikandar Begam, and of Ahmad 'Ali Khan, husband of Sultan Dha'han Begam, rulers of Bhopal. The city was made the capital of the State by Nawwb Fayyad Muhammad Khan (1268/1754-1272/1777) whose predecessors' seat of Government was Islamnagar (25°22' N. and 77°25'E.).

In 1227/1812-13, the town, outside the wall, was devastated by the combined forces of Nogpur and Gwallor, which had attacked Bhopal. Nadir Muhammad Khan (1233/1816-1234/1818), during his short rule began to restore the town, which process was continued for decades thereafter. Many civic amenities, like roads and street-lighting, were introduced by Sikandar Begam followed by Shahdjhan and Sultan Dha'han Begams; the former particularly added some grand buildings of which the Taj Mahall palace and the Tadj al-Masjid deserve mention.

The two lakes, on whose banks a string of palaces has been raised by almost all the rulers, are connected by an aqueduct and provide drinking water to the citizens. Above them rises the city, tier on tier of irregular houses, with spacious gardens here and there, dominated by the congregational mosque of Kudsiyya Begam, built of purple-red sandstone, with high minarets, from which the Friday prayer is led. In the same building is the tomb of the ambassador to the Mughals who died in 1614.

BIBAN [see KAMISA].

BIBAN, the gates; passes across a chain of the Tellian Atlas Mountains—parallel to the Djurdjura, south of the depression of the Wad! Sahel. The French have retained the Turkish name for these passes, Damir kapu, Iron Gates. The road and railway track from Algiers to Constantine both pass through the Great Gate, al-Bab al-Kahir, hollowed out by the Wadi Chebba. The Little Gate, al-Bab al-Saghir, 3.5 km. to the east, is crossed by the Wad! Buktun. It is the narrower of the two. These 'gates' were not included in the network of Roman roads and the Arab routes, were used from the sixteenth century onwards by Turkish troops travelling between Algiers and Constantine; but these troops were forced to pay the rough local inhabitants to let them pass through the area un molested. On October 28th, 1839, a French column of 8000 men, commanded by Marshal Vallee, Governor-general of Algeria, and accompanied by the Duke of Orleans, crossed the Pass of the 'Little Gate' without hindrance, for the mountain tribesmen of the locality had obtained the customary tribute through the good offices of Mokrani, bag-aqsa of Medjdjana, won over to the French cause.

This expedition, known as that of the Iron Gates, was acclaimed as a brilliant feat of arms, but it led to the final rupture between the French and 'Abd al-Kadir who regarded it as a violation of the Treaty of Tafna.

Geographers have extended the name Biban to the whole of the anticlinal chain of mountains which cuts across the Iron Gates and which stretches at a height of 1000 to over 1400 metres from Aumale to the Guergour (Lafayette), separating the depression of the Wad! Sahel and the tributary valleys of the lower Bou Sellam from the structurally complex mountains of the Ouenougha, the Mezza and the Meten and of the basin of the Bordj buou Arreridj. These mountains with their limestone, marle and schistose clay soil are not very fertile. The Biban chain is partly wooded with Aleppo pines. Populated by Arab tribes in the west, Kabyle Berbers in the centre, it forms, in the east, the southern boundary of the Kabyle Berber dialect area (see 'Abd al-Kadir, Algerian Atlas, Kabylia).

(G. Yver-[J. Des Pois])

BIBI, a word of East Turkish origin, with the meaning of 'little old mother', 'grandmother', 'woman of high rank', 'lady'. It is noted, with the sense of 'woman of consequence', 'lady', in the Ottoman-Turkish dictionary Lughat-i Deshdji, composed in 988(1580-1581). Bibi also means, in Anatolian Turkish, 'paternal aunt'. Taken into Persian at an early date, with the sense of 'woman of the house', 'lady', the word can be found in a verse of Anwarî (12th cent. A.D.) cited in the Farhang-i Nasiri. It was in used in Khurasan during the 13th century as a title for women of distinction, as in the case of the mother of the author who wrote the history of the Saldjids in Asia Minor, 'Ali b. Muhammad b. Husayn b. Muhammad b. 'Ali al-Djafari al-Rughadî, better known under the name Ibn Bibî [q.v.] al-Munadjidima (son of the distinguished lady, the woman astrologer). One of the two wives of Shaykh Safî (cf. Safî al-Dîn) was called Bibî Fattima. The mausoleum, situated near Tehran, of the daughter of the last Sâsâni, Yaqûtîrîd III, is known under the name Bibî Shahrâbân.

BIBLE [see TARKAV, ZABUR, Imp.]

BIBLIOGRAPHY. In the present article the word is used in the sense of a systematically arranged list of books, compiled for the benefit of those who need to know what has been written on a particular subject.

The outstanding achievement in Islamic bibliography to appear before the adoption of printing in Islamic territories is the Fihrist. Its author, Ibn al-Nadim [q.v.], a bookseller (warrik) in Baghda, compiled the work in 377/987-8 in the form of a bibliographical history of literature, arranged in ten books, the first six being concerned with the "Islamic writings" (Kur'an, grammar, history and belles-lettres, poetry, scholastic philosophy, and law), the remaining four with philosophy and science, legends and fables, sects and creeds, and alchemy. In each book there is to be found an account of the rise and development of the study of the subject dealt with, a list of all available writings on it and bibliographical details of their authors, from the earliest times.
The other great monument of Islamic bibliography is the Kāfiyā al-Zunun 'an Asmā' al-Kubūb wa l-Funūn, a work for which the Ottoman polymath, Hāджīdīl Khādī, spent some 650 years after the Fihrist. After an introduction relating at great length the nature, value, divisions and history of the various sciences, the author lists the titles of all the works written in Arabic, Persian and Turkish which he had personally seen or of which he knew the title. For each work he gives details of author, date of compilation, particulars of its division into sections and chapters, and the various commentaries, glosses, refutations and criticisms that the work has attracted to itself; he gives incipits of all works seen by him in order to facilitate the identification of unknown works. Several supplements to the work were compiled by his successors, the latest by Bādgāth Iṣmā'īl Pāsha (d. 1920) containing some 18,000 titles.

Little needs to be said about the remaining bibliographical works which have survived. Ibn Khayr al-Īshībīl (A.H. 502-572, q.v.), who spent the greater part of his life as a peripatetic student in Andalusia, compiled a Fihrist (ed. Codera and Ribera, BAH IX, X, Saragossa 1894) in which he enumerates the titles of some 1400 books in Arabic of both Spanish and Oriental origin which he had read or heard, with chains of transmission going back to their original authors. Lists of works of individual writers exist, such as those for Rāzī (compiled by al-Bīrūnī, ed. P. Kraus, Paris 1936), Galen translations (by Ḥusayn b. Iṣhāk, ed. Bergsträßer, Leipzig 1925, and 1932) and Ṣuyūṭī’s autobibliography (Brockelmann II 145; S II 179). The Shī’īs were assiduous in the compilation of bibliographies of writings of their own adherents; the earliest, by Muhammad b. al-Ḥasan al-Ṭūsī (d. A.H. 460), has been edited by Sprenger, ʻAbd al-Ḥaḳḳ, and Ghulām Kādir for the Bibliotheca Indica. In the preface to this edition three similar works on bibliography are described. More recently, ʻIḍār al-Ḥusayn’s (A.H. 1240-1286) Kāfiyā al-Iṣbūb wa l-ʻAsrār ‘an Asmā’ al-Kubūb wa l-Funūn contains notices of 3414 Shī’ī books arranged alphabetically, and the al-Dhārī’s tiw Taṣāwif al-Shī’a of Aḥbār Buzurg al-Tahrīrī (1396, in progress) has already run to ten volumes.

The publications of Western scholars and students of Islam were recorded for the first time by Schnurrer, the second edition of whose Bibliotheca Arabica published in 1811 lists in an arrangement by subject the printed works on the subject from the earliest times until the year 1810 with a chronological index. Zenker’s Bibliotheca Orientalis (Leipzig 1840; 2nd ed., ib., 1846, 1861) which purported to give the titles of all Arabic, Persian and Turkish books from the inception of printing, is disappointing. Chauvin continued the work of Schnurrer in a much more expert fashion, providing incidentally an author index to the Bibliotheca Arabica. Of his Bibliographie des ouvrages arabes on relatifs aux Arabes publiés dans l’Europe chrétienne de 1810 à 1885 twelve volumes in all were published during the years 1892-1922; the materials for the remaining part of this work are still preserved in manuscript in the library of the University of Liège. It was his intention to bridge the gap between Schnurrer and the Orientalische Bibliographie which began publication in 1887 and provided a most adequate record of all publications in the Islamic field, as well as in all other branches of Oriental studies, until 1911. Had Chauvin’s work been published in its entirety there would now be in existence a substantially complete record of all Western publications on Islamic subjects from the beginnings down to 1911 readily to hand in the three bibliographies, Schnurrer, Chauvin, Orientalische Bibliographie. The ever-increasing volume of work done on Islamic studies and consequent publication since that date made it even more difficult to comprehend the total of publications over a period within the confines of a single work. For publication since 1911, therefore, the scholar must make recourse to a large number of bibliographies of all kinds which cannot here be listed in detail. (Pfannmüller in his Handbuch der Islamischen (Berlin and Leipzig 1923) provided a useful introduction and guide to the literature of the subject, but had no intention of compiling a complete Islam bibliography). The principal periodicals in the field have striven to cope with the problem: it is only necessary to mention the ‘Kritische Bibliographie’ published in Der Islam at intervals from 1913 to 1933 and ‘Abstracta Islamica’ which, since 1937, has been a regular feature of the Revue des études islamiques.

In Index Islamicus (Cambridge 1958), Pearson has attempted to list the periodical and Festschrift articles of the fifty years from 1906 to 1955.

The Ibn al-Nadīm—Hāджīdīl Khādī tradition of bibliographical literary histories has been carried on in our own times in the monumental works of Brockelmann and Storey on Arabic and Persian literature respectively. Each of these writers gives, in addition to bibliographical data, a list as complete as it is possible to make of surviving manuscripts, cumulating the printed catalogues of collections in all libraries, as well as notes on the principal editions, translations and works of history or criticism of the individual writers. Brockelmann handles his material on a chronological basis, Storey arranges his by subject; both are quite indispensable for all students of these literatures, as well as to all who have occasion to catalogue Arabic and Persian books and manuscripts. A similar work with more limited scope was compiled by Bahinger, Geschichenschreiber der Osmanen (Leipzig 1927). Christian and Jewish literature in Arabic form the subject of separate treatments by G. Graf, Gesch. d. christlichen arab. Litt., 5 vols., Vatican City 1944-53, and M. Steinschneider, Arab. Litt. der Juden, Frankfurt 1902.

In recent years Islamic countries themselves have been making great contributions to their bibliography. In 1918 Yūsuf ʿĪlyān Sarkis published his Muḍjam al-Maṭbūʿāt al-‘Arabiyya wa l-Mu‘arrabā containing the titles of all Arabic printed books from the beginnings of printing to the year 1919 inclusive, arranged in alphabetical sequence according to the most commonly used form of the author’s name, whichever this be ʾism, laḥab, ḥuṣya or nisba. The work is provided with an index of the titles of works. Egypt has issued a number of volumes of what is to all intents and purposes a national bibliography in Al-sīdījīl al-ṭabāḥīl. A Persian national bibliography by Dr. İrādji Afsār has appeared in the Farhang-i Irān-sāmīn since 1954 and the first volume of a catalogue of Persian printed books by Khanbābā Muḥārār was published in 1337 solar/1915. The ‘Oshnānī muʿāṣīlara of Bursāl Mehmēd Tābīr is a bio-bibliographical dictionary of Ottoman writers in the style of the tāḥkīmer and is of great value to all students of Turkish culture, even though it is
not marked by accuracy of bibliographical detail and, as Babinger puts it, finding a name in the index is often a matter of luck or demanding of great patience. Türk bibliyografyası has recorded all publications in Turkey since 1928 and the National Library has announced plans for the publication of a catalogue of Turkish printed books from the date of the adoption of printing in that country in the 13th century. Türkçe makaleler bibliyografyası, an index to articles in Turkish periodicals, has been issued regularly since 1952.

G. Gabrieli, *Manuale di bibliografia musulmana* (Rome 1916) is the only work of its kind and is invaluable for its lists of general bibliographical works. (Regrettably only the first part was ever published). For the works of Schnurrier and Zenker see the preface to Chauvin, *Bibliographie des ouvrages arabes*, esp. xx-xxx; for the unpublished portions of Chauvin’s Bibliographie see J. Gobeaux-Thoret, *Notes from the Liège Library on Victor Chauvin and on Ibn Butlūn in Unity and variety in Muslim civilisation* (ed. Grunebaum, 1955), 363-4; the index to Schnurrier occupies xli-cxvii; Brockelmann, *Geschichte der arabischen Literatur* was originally published at Weimar and Berlin, 2 vols., 1898-1902; Supplementbände I-III, Leiden 1932-42; 2den Supplementbänden angepasste Aufl., 2 vols. Leiden 1943, 1946. Storey, *Persian literature, London* 1927-, in progress.

(J. D. Pearson)

**BID’A**, innovation, a belief or practice for which there is no precedent in the time of the Prophet. It is the opposite of sunna and is a synonym of mubdath or hadath. While some Muslims felt that every innovation must necessarily be wrong, some allowance obviously had to be made for changing circumstances. Thus a distinction came to be made between a bid‘a which was ‘good’ (kasara) or praiseworthy (mahmudā), and one which was ‘bad’ (sayyida) or blameworthy (mādhdima). Al-Shāfi‘i laid down the principle that any innovation which runs contrary to the Kur‘ān, the sunna, idīma, or aištah (a tradition traced only to a Companion or a Follower) is an erring innovation, whereas any good thing introduced which does not run counter to any of these sources is praiseworthy. On this basis innovations have been classified according to the five categories (akḵām) of Muslim law. Under duties incumbent on the community (fard ḵifāya) are included such bid‘as as the study of grammar, rhetoric, etc. on which an understanding of the Kur‘ān and the sunna is based, investigation of the reliability of men whose authority is quoted for traditions (al-dīfrared wa‘ītā’il [g.v.]), distinguishing sound and weak traditions, codifying law, and the refutation of heretical sects. Prohibited (muharrama) innovations include the doctrines of those who oppose the followers of the sunna and the accepted beliefs of the community. Among those which are recommended (mandāba) is the establishment of such institutions as hospices and schools. Innovations which are disapproved (mahrūka) include the decoration of mosques and the ornamentation of copies of the Kur‘ān. Among those which are permitted (mubda‘a), i.e. towards which the law is indifferent, is the free use of pleasant foods, drinks and clothing.

Bid‘a is to be distinguished from heresy. When it includes matters which have been introduced in disagreement with what has come down from the Prophet, it is said that this is not due to any purpose of rebelling against him, but has arisen through some kind of confusion. Innovators are called Ahl al-bid‘a and Ahl al-akwā‘. The implication is that the innovator (mubdī‘a) is one who introduces something on an arbitrary principle without having any basis in the recognised foundations of Islam. The objection to bid‘a has led some Muslims in more recent times to denounce the use of tobacco and coffee, and even of modern scientific inventions; but among the Wahhābis, the strictest body within modern Islam, scientific inventions are freely used. Indeed, the economy of the present state of Saudi Arabia is mainly dependent on oil whose production could not be accomplished without modern inventions.

Bid‘a may be treated on the level of kiyās [q.v.]. Just as what is kiyās in one generation may be included in what a later generation considers idīma, so may it be with bid‘a. The distinction between ‘good’ and ‘bad’ innovations was therefore a necessary principle. Only people of an ultra-conservative nature who live in an unreal world of their own and rail. A new edition which was ‘good’ and ‘bad’ innovations was therefore a necessary principle. Only people of an ultra-conservative nature who live in an unreal world of their own and differing circumstances. But a number of traditions condemning innovations are found in the collections of Ḥadīth as statements of the Prophet.

(J. Robson)

**BIDAR**, a district in south-central India (the ‘Deccan’, [q.v.]), and the headquarters town of that district, lat. 17° 55' N., long. 77° 32' E., population over 15,000, 82 miles north-west of Ḥaydārābād from which it is easily accessible by road and rail.

The identification of Bidar with the ancient Vidarba (Briggs’s *Ferishta*, ii, 411) is now discounted, cf. G. Yazdani, *Bidar: its history and monuments*, Oxford 1947. A, Bidar was included in the Cālukya kingdom of Kalyān, 4th-6th/10th-12th centuries, but in the hands of the Kākatiyās of Warangal when conquered by Ulugh Khān (later Muḥammad b. Tughlāk, [q.v.]) in 722/1322 (details of siege and men-
tion of fortifications, Divā' al-Dīn Barānī, Ta'rikh-i Fitrūr Shāhī, Bibl. Ind., 449), from whose governor it was taken after a fierce battle in 748/1347 by a Amir-i Sadak (Commander of a Sādī or subdivision of approximately 100 villages; Barānī, 495; Ribha, Cairo ed., ii, 75), Zafar Khān. The latter, on his acceptance as first king of the Bahmani dynasty [q.v.] as 'Allā' al-Dīn Ḥasan Bahman Shāh, divided his dominion into four provinces, of which Bidar was one. The town was important strategically (Bahmani dynasty, monuments, [q.v.]), and as a fortress held the seventh Bahmani king, Mahdī al-Dīn (799/1397) in internment; Muhammad II (780-99/1378-97) established orphanage schools in Bidar and elsewhere, cf. Briggs's Forskhta, ii, 349-50. An assault by the eighth king, Firūr Shāh, against his brother Ahmad in 825/1422 was repulsed at Bidar, leading to Ahmad's succession, shortly after which he transferred his capital to Bidar from Gulbarga (Sayyid 'Allā Tabatābā, Burhdn-i Mā'dīr, Haydarābād edn., 49-50), rebuilt the fortifications and renamed it Muhammadābād; the natural position of Bidar on a healthy plateau with abundant water, and its central position in the kingdom, offered advantages not possessed by Ahbānābād-Gulbarga. Bidar was attacked in 866/1462 by Sulṭān Mūzmīd Khādīfī of Māwī, who destroyed some of its buildings, but was repulsed with the aid of Sulṭān Māhmūd Shāh of Gujūrāt. Bidar's heyday under the Bahmanīs was during the able ministry of Māhmūd Gāwān [q.v.], c. 866-886/1462-68; but after his murder the Bahmani power declined, to the advantage of the minister Kāsim Barīd (founder of the Barīdī dynasty, [q.v.]) and his family. The Bahmanīs remained as puppet kings under the Barīdī ministers until at least 932/1527; 'Allūr Barīd was de facto ruler until 949/1544, and his son 'Alī Barīd adopted the royal title, presumably after the death of the last Bahmani king, Kālīm Allāh (for coins in whose name, dated 952 [== 1545 A.D.], see Proc. VII All-India Oriental Conf., 740). Bidar fell to Ibrahim 'Adī Shāh of Bīdāpur in 1028/1619, was annexed to the Mūlakh empire by Awrangzīb in 1066/1656, and passed to Nīzm al-Mulk Asaf Dijā in 1137/1724.

Monuments. Buildings particularly associated with the Bahmanī and Barīdī dynasties are described under those headings; those of the post-Barīdī period are unimportant and are not described. Page references in the following account are to Yazdani, op. cit.

The city and fort are both fully walled, and in their present area date from the time of Ahmad Shāh Wall Bahmanī, who incorporated the old Hindū fort in the west of the present area into his buildings of 823-5/1422-2; Persian and Turkish engineers and architects are known to have been employed. The ground on the north and east of the perimeter falls sharply away; on the other sides the walls are within a triple moat hewn out of the laterite outcrop by local Hindū masons (p. 29). Much of the defences was destroyed in Mūzmīd Khādīfī's invasion (vide above) and restored by Nīzm Shāh; but their characteristic was continued in the time of Mūzmūd Shāh Bahmanī, c. 875/1470, after the introduction of gunpowder. Minor improvements were made by Mahdī Shāh (inscriptions, EIM 1925-6, 178-8), and more extensive ones, including the mounting of large guns, by 'Alī Barīd Shāh, 949-87/1542-79. The description of the defences in the reign of Shāhjahān by Mūzmūdī Shāhī Kāmbū ('Amdal-i Shāhī, Bibl. Ind., iii, 249-50) indicates that little subsequent changes were made. In the perimeter of 4 km. there are 37 bastions, mostly massive, many with gun emplacements, and 7 gates as well as the three successive gates between town and fort. The first gateway serves as a barbican for the second, the Shārza Darwāza—so called from the figures of two tigers carved on the façade, a common feature of Dakhân forts (32). The third gate, Gunbad Darwāza, is massive, with battered walls, hemispherical dome and corner guldastas recalling the contemporary Delhi architecture, but with an outer arch of wide span stilted above the haunch, the shape of much Persian-inspired architecture in the Deccan and characteristic of the Bahmanī buildings in particular (34). The town walls are said to be the work of 'Allī Barīd (Mūzmūdī Sulṭān, 'Ā husband-i Bīdār, 17-18) in 962-3/1555-8, but doubtless superseded Bahmanī work. Again there are 37 bastions, adapted for long-range guns, and five gateways (83-90).

Within the fort is the Solah Kha mbā ('sixteen pillar', so called from a period of its decay when 16 pillars were screened off in the (Shah) Masdīj, the earliest Muslim building at Bidar and the original Djāmī' Masdīj, having been established before the transfer of the capital (inscription giving date 827 [== 1423-4 A.D.], EIM 1931-2, 26-7); the style is heavy and monotonous, particularly in the 91-metre façade, and the inner circular piers were over-massive; the central dome rests on a hexadecagonal collar pierced with treatered windows, to form a clerestory (54-6); the Takht Mā'hīl, the modern name for what was probably Ahmad Shāh Wall Bahmanī's palace described in the Burhdn-i Ma'sīr, 70-1, and referred to as Dar al-Imāra by Firšt, i, 627. The arches have the typical Bahmanī Hilt at the apex, and the fine encaustic tile-work, probably imported from Kāshān, includes the emblem of the tiger and rising sun (66-77); the Bahmanī Dīwān-i 'Ā'īnm, with fine tile-work in floral, geometric and calligraphic (Kūfī) designs, generally Persian with some chinoiserie (62-6); the Gagan (Skt. 'sky'), Tarkash and Rangīn Māhalls, all begun in Bahmanī times and rebuilt by the Barīdīs: typical Barīdī chain-and-pendant motif in Tarkash Māhall, 'Allī Barīd's rebuilding of Rangīn Māhall in inlay mother-of-pearl work and woodcarving in Hindū as well as Muslim patterns, with some cespning of wooden arches, the best of Barīdī work but on too small a scale to be fully effective (60-2, 57-9, 44-9 respectively); a group of underground rooms, Hazār Kottālī, with an emergency escape passage leading outside the walls (77-8); the Shāhī Hāmmām, late Bahmanī or early Barīdī, with a fine vaulted ceiling, 51-2; and minor buildings.

Within the town walls are the Čāwbrā, a massive tower at a cross-roads probably built by Ahmad Shāh as an observation post (90); the great Madrasa of Māhmūd Gāwān, built 877/1472, whose Persian prototype was the madrasa of Khārgīr in Khurāsān (cf. E. Dīez, Chorasamische Baudenkmäler, i, 72-6); its remaining mindār (the other, with the south-east corner, destroyed by a gunpowder explosion in 1107/1696, 40 m. high, in three stages. Much of the former tile-work has perished from the mindār and façades, but the proportions, the silhouette, and the interplay of light and shade due to the rows of deeply recessed mindrs, ...
late Bahmani design, and a trefoil parapet which, originating in the Bahmani period, is found in Baridi buildings also (100-2); the Dāmād Māsjid of the town, plain but elegant, with a high lantern-vaulted iwan under its double dome, late Bahmani work restored in the Baridi period (chain-and-pendant motif in spandrels of façade), 1054; the Bārī Khānkhā of Māhābūb Subhān, whose mosque parapet shows the overlapping arches of the Bahmani period, 111. Outside the town walls are (besides the tomb buildings of the Bahmanis and Baridi Šhāhs, (q.v.)) the fine Cāwī khāndi of Ḥadrat Khallī Allāh, similar in style to the tomb of ʿAlāʾ al-Dīn Bahmanī and one of the best Bahmani buildings (141-6); the tombs of the Abyssinian nobles in the Hābshī Kōt, 180; the Kāli (black) Māsjid, probably early Baridi, whose mihrāb, projecting out from the iwan, forms a high square chimney-like base for a dome supported on each side by an open arch, resembling an aerial Baridi tomb (196-7); and numerous other buildings.

Mention must be made of the local Bīdīrī ware, a class of damascened metalwork in which engraved and inlaid silver designs are made on an alloy (mainly zinc with some copper, lead and occasionally tin) base, which is afterwards blackened and highly polished; the blackening is carried out by rubbing a locally-obtained earth, containing alkali nitrates, mixed with ammonium chloride, on the fresh surface of the alloy.

Bibliography: Yazdani, op. cit., supersedes all previous work on the monuments: full references, extensive plates, drawings, plans, inscriptions, etc. See also J. Burgess, Antiquities in Bīdīr and Awrangabad Districts, ASI Tii (≡ NIS ili), 1878; ASI Annual Report, 1928-9, 5-11; Hyderabad Arch. Dept. Reports, passim; Sir J. Marshall, The monuments of Muslim India, Chap. xxi in Cambridge History of India, 1928; Percy Brown, Indian Architecture (Islamic period), Chap. xii. For Bīdīr as a fortified city, full description with measured drawings of fortifications in S. Toy, The strongholds of India, London 1957. For the history of Bīdīr see Gazetteer of the Bīdīr district; Sherwānī, Mahmūd Gauwān, the Great Bahmanī Wazīr, and The Bahmanīs of the Deccan, an Objective study.

For Bīdīrī ware, full references in T. K. Gairola, Bīdīrī Ware, in Ancient India, XIII, 1956, 166-8, which supersedes all previous technical work.

(H. K. Sherwani and J. Burton-Pack)

BIDIL, Mīrzā ʿAbd al-Ḵādīr b. ʿAbd al-Khālik Aḵūṣ (or Barlaš), of Bhūkhārā origin, was born at ʿAẓmābād (Paṭna) in 1054/1644, where his family had settled. He lost his father in 1059/1649 and was brought up by his uncle Mīrzā Kalandār (d. 1076/1665) and maternal uncle Mīrzā Zarrīf (d. 1075/1664), who was well-versed in Ḵurāšī literature and Ḵūšā (1070/1669 he visited a number of places in Bengal along his way to Calcutta (Orissa) where he stayed for three years. It was here in Orissa that Mīrzā Zarrīf, who also had strong mystic leanings introduced him to Shāh Kāsim Ḥuwaštāhī with whom he soon after contracted his baʿyā (1076/1665) he went to Delhi, where he met Shāh Kābul, a Ṣidṭ, to whom he devotes a lengthy chapter in Ḍawī Ṣanṣarī. For two years thereafter he wandered about the woods of Bindrābān and the streets of Muttra, ʿAẓmābād and Agra in search of Shāh Kābul, who had disappeared suddenly. While at Agra, Bīdil experienced hardship and starvation. In 1079/1668 he married, and entered the service of Prince Muḥammad ʿAṣʿam b. Awrangzīb, whom he served for a number of years. The Prince once requested him to compose a ḥaṣīdī in his praise; Bīdil refused to do so, and resigned his position. Khuṣūghī’s statement (as reproduced in Fāyūdī Ṣuds, 80) that Bīdil remained in the service of the Prince for twenty years is not supported by other writers. Soon after his resignation he again took to wandering; this time visiting several places in the Pandīrbāz, including Ḥaydarābād. His wanderings, however, ended in 1096/1685 when he finally settled at Delhi. He was offered a high post by Ṣafī Dīn I, the Niẓām of Ḥaydarābād, who was one of his pupils in poetry; although grateful for the offer, Bīdil refused to accept it. He died in 1133/1721 and was buried in the courtyard of his house in Old Delhi. The exact location of his grave in the ruined city has been a matter of great controversy. The present grave, with an inscribed head-stone, is spurious.

Essentially a mystic poet, said to have composed over ninety thousand verses, Bīdil is very popular in Afghanīstān and parts of Central Turkistān. In poetry he has been compared with Saʿdī and Rūmī, in prose with al-ʿAnsārī al-Harawi and al-Ghazzī (qq.v.).

He is the author of: (i) Čahār ʿUnsur, written in 1116/1704, a mainly biographical work interspersed with supernatural anecdotes (Cawnpore 1292/1875); (ii) Nikāt, a philosophical treatise dealing with certain abstruse problems like waḥāb, ilḵām, nubwawat, etc., profusely interspersed with ʿagāhs, kalāt wa ʿrābīʾiyāt, (Cawnpore 1292/1875); (iii) Muḥtār-i ʿAṣʿam, a mathnāwī on the lines of Ṣafīʾāl-Dīn’s Sāhīna, published as part of Ḳulffās Bīdīrī (Bombay 1299/1881); (iv) Ṣufmān, another mathnāwī, written in 1144/1732 and comprising 12,000 verses, deals with metaphysical problems as the author understood them (Bombay 1299/1881); (v) Ṭūr-i Maʿrīfāt, another mathnāwī comprising 6,000 verses, still unpublished (MS. Punjab Univ. Lib.), deals with natural phenomena; (vi) Tūsīm-i Ḥaydar, also a mathnāwī of the same length as Ṭūr-i Maʿrīfāt (Bombay 1299/1881); (vii) Diwān; no complete edition has been published so far; an incomplete edition, however, up to ṫarafḍāl only was published at Kābul (1334/1915), and another edition at Cawnpore (Nawalkahore: 1292/1875); (vii) Ṣurāt, a fine specimen of Persian letter-writing, containing useful informations about the numerous pupils of the poet and some of his benefactors (Cawnpore 1292/1875); select works of Bīdil have also been published at Tashkent, as he is very popular in the republics of Tadžikistān and Uzbekistān in the U.S.S.R.

Bibliography: Khalīl Allāh Khān “Khalīlī”, Fāyūdī Ṣuds, Kābul 1334 (Shamsi) 1956, (this work contains extracts from Bīdīrī in all the known published and unpublished sources); ʿAbd Allāh ʿAkhtār, Bīdīrī, Lahore 1952., (extensively reviews all the works by Bīdil except his Ṣafmān); ʿAbd al-Ghānī, Taḏḵīrāt-i Bīdīrī (in Oriental College Mag: Lahore, August 1956); “ʿAbd al-Ghānī “Nasāḥīh”, Sukhān-i Shūrād, Lucknow 1291/1874, 75; ʿAbd al-Hayy, Nadwī, Nuzkāt al-Ḵosarāt, Haydarābād (Dh.) 1300/1981, vi, 157; Kudrāt Allāh “Kāsim”, Muddanjāh-e Nagāh, Lahore 1933, i, 115-17; Maʿrīf (ʿAṣʿamgar) 33/1, 1934, May and July 1942, 58/ii, 1946; Šīḏīk Ḥasan Khān, Sham-i Andījum, Bhopal 1292/1876, 82-4; Mir Ḥusayn Dost Sambhāl, Taḏḵīrāt-i Ḥusaynī, Lucknow 1292/1876, 74-7;
... the Marathas in 1174/1760 for a sum of 6,000,000 rupees. On the overthrow of the Peshwa in 1234/1818 (f. 2v). All his books are written in a...
the British occupied Bijdapur and assigned it to the Râdâh of Satârâ in whose possession it remained till 1266/1848 when, on the lapse of the State, it formed part of British Indian territory. In 1281/1864 Bijdapur was made a separate district and in many of the old palaces were housed Government offices which were, however, later shifted elsewhere.

The 1Adil Shâhs were great patrons of art and literature. Malik Kûmmi, the poet and Zuhûrî, the celebrated author of the two Persian classics, Sîr Naâmî and Mînzâd Bâzîd, formed for a considerable time the Court of Ibrahim 1Adil Shâh, himself a poet, who composed in Dakhanî Urdu.

It is still remembered as the Skull Famine, the ground being covered with the skulls of the unburied dead. The second occurred in 1234/1818-19 reducing the once flourishing city to a mere township, of a few thousand souls, which has since then remained a city of desolate palaces and historical ruins. Other periods of severe drought were those of 1240/1824-5, 1248/1832-3, 1270/1853-4, 1280/1863-4 and 1283/1866-7.

(A. S. Bazmee Ansari)

Monuments.—The 1Adil Shâhs developed the building art upon all other, and their architecture is the most satisfactory of all the Deccan styles, both structurally and aesthetically; hence their capital, Bijdapur shows a more profuse display of excellent and significant buildings than any other city in India except Delhi alone. The Bijdapur style is coherent within itself, and there is a gradual progression between its two main phases. Most worthy of note are the doming system with its striking treatment of pendentes; profuse employment of minarets and gilded asas as ornamental features, especially in the earlier phase; elaborate cornices; reliance on morter of great strength and durability. The materials employed are either rubble-and-plaster or masonry; the stone used in masonry work is local, a very brittle trap. There is evidence to show that architects were imported from North India, and that use was freely made of local Hindu craftsmanship.

The long reign of 1All I saw much building activity: the city walls, uneven in quality since each noble was responsible for a section, completed 973/1565, with five main gates flanked by bastions and machicolated, approached by drawbridges across a moat, beyond which is a revetted counterscarp and covert way (many bastions modified to take heavy guns; inscriptions of Muhammad and 1All II); the Gagan ("sky") Mahâl, an assembly hall with much work in carved wood; a mosque in memory of sayyid 1All Shâhî Prî, small (10.8 m. square) but superbly decorated with cut-plaster, with a steep wagon-vaulted roof parallel to the façade, a tall narrow chimney-like vault over the mihrâb which has a door leading outside; the Shâhpur suburbs; outside Bijdapur, the forts of Shâhâbdr (966/1558), Dhâwîr (975/1571), Shânâhur and Bankapur (981/1573); 1All's own severely plain tomb; and his 1Dâmi Masjid, generally ascribed to 985/1576, a fine large (137.2 by 82.3 m.) building, not fully completed (only buttresses of tall minars were to be added, no kanguras over façade), sparingly ornamented (only the central arch of seven in the lintel façade is cusped and decorated with medallion-and-bracket spandrels), with the great hemispherical dome, standing on a square triforium, capped by the crescent, a symbol used by the 1Adil Shâhs alone among the Dakhâni dynasties. The cornice is an improvement on earlier works by showing deeper brackets over each pier instead of a row of uniform size. The vaulting system of the dome depends on cross-arching: two intersecting squares of arches run across the hall between the piers under the dome, meeting to form an octagonal space over which the dome rests; the pendentes thus overhang the hall and counteract any side-thrust of the dome. The exterior walls are relieved by a ground-floor course of blind arches over which is a loggia of open arches.

In Ibrahim II's reign fine sculptured stone work replaces the earlier rubble-and-plaster. The palace complex dates from about 990/1582 (Sât Manzil, 'Granary', Ćûl Mahâl); the first building in elaborate sculptured stone is Malika Dzhâhân's mosque (994/1586-7), which introduces a new shape by the dome forming three quarters of a sphere above its field of foliation. The Bukhârî mosque and three others on the Shâhpur suburb are very similar, and fine.
stonework occurs also in perhaps the greatest work of the 'Adil Shahls, the mausoleum of Ibrahim II and his family known as the Ibrahim Rawda; within a garden enclosure 137.2 m. square stand a tomb and mosque on a common plinth; the tomb (shown by inscriptions to have been intended for the queen Tadj Sultana only) has uneven spacing of the columns and other features, and the cenotaph chamber is covered with geometric and calligraphic designs, reputedly the entire text of the Kur'an. The mosque columns are regular. The whole composition is in perfect balance and was minutely planned before building. An inscription gives the date of completion, by abjad, as 1036/1626. Palaces of this reign include the Anand Mahall, built for entertainments (Basatin al-Salatin), and the Aghlar Mahall (1000/1591) with fine painted wood decoration including some fresco figure-paintings thought to be the work of Italian artists. The Anda ("egg") Masjid, 1017/1608, has the mosque (presumably for the use of women) on the upper storey, with a saraf below; the mosaic is polished and finely jointed, and above is a ribbed dome. In 1008/1599 Ibrahim proposed moving his seat of government some 5 km. west of Bidjapur where the water supply was better; but the new town, Navraspur, was sacked in 1034/1624, before its completion, by Malik 'Anbar, and little remains. Other work includes the mosque known as the Naw Gunbadh, the only Bidjapur building with multiple doming: the fine but incomplete mausoleum of the brother pir's Hamid and Latif Allah Kadir (ob. 1011/1602, 1021/1612); and, the supreme example of the later work of this reign, the Mihtar-i Mahall, really a museum complex, is formally simple: a hemi-mosque being the only two-storeyed one in Bidjapur, the gate of the last monarch, the minor Sikandar, closes the 'Adil Shahi effort with a simple grave in the open air.

**BIDJAYA** (Bougie), maritime Algerian town situated about 175 km. east of Algiers. Built on the lowest slopes of the Djabal Guraya, the city overlooks a spacious arid valley of the bay. Doubtless Roman and Carthaginian shipping anchored off Soldaie, the old town. At the beginning of the Christian era, it formed part of the domain of Juba, king of Cherchel. The emperor Augustus founded a colony there and settled it with veterans. An inscription dating from the second century extols Soldaie as "civitas splendidissima." Nevertheless, it played no significant part until the Muslim era. In the 5th/6th century, al-Bakri refers to it as a very ancient city, a pleasant winter resort, populated with Andalusians. From this period, the Spanish Muslims were strongly represented side by side with the Berber element, the Bidjaya tribe, to which the town owes its name.

The event which made Bougie historically famous took place in 460/1067. The facts are briefly as follows. The mid-5th/11th century witnessed the rupture between the Zirids of al-Kayrawan and the Fatimid Caliph of Cairo, and the reprisals which followed: the Hilalian invasion, the arrival of nomad Arabs sent from Egypt to take possession of the rebel kingdom. These reprisals were terrible. The nomads pillaged the countryside of Irikiya. The sacked inland towns were partly evacuated. The kingdom of the Hammedids first took advantage of this free-for-all. The end of the eleventh century was the
golden era of their Kalifa. At the same time the Arabs were not slow to spread westward and offered a serious menace to the Kalifa of the Banu Hamda. These decided to look about for a less exposed capital. Just as the Zirids had left al-Kayrawan and betaken themselves to the maritime town of Mahdiyya, the masters of the Kalifa withdrew to the coast. In 1067, the Hammadid al-Nasir occupied the land of the Bidjaya and set up his capital at Bougie which he wished to call al-Nasiriyya. Though he continued to spend part of his time at the Kalifa's, he gave priority to the expansion of his new capital, put himself out to attract settlers and built there the splendid Castle of the Pearl (Ka'ar-al-Lu't'a'lu'it). The son of al-Nasir, al-Mansur (483/498/1090-1104) left the Kalifa (which, however, he had embellished with new buildings) in his turn. He abandoned the Kalifa permanently and installed himself in Bougie with his troops and his court. Here he built the great mosque, planted gardens and erected the palaces of Aminun and the Sta (Ka'ar-al-Kawkab) and supplied the city with water, carried by aqueduct from the Djabal Toudja. The town is reputed to have been divided into twenty-one quarters and to have contained seventy-two mosques. Doubtless this is something of an exaggeration but it is certain that the first half of the 11th/12th century was the golden age of Bougie. The second capital of the Hammadids had inherited from the first. It had welcomed the intellectual elite, the wealthy bourgeoisie, the sages and artists of the fallen Kalifa. Life in Bougie was easy and free from austerity. The luxurious costume worn by the citizens, from the studied elegance of their turbans to their shoes, tied on with gilded ribbons, shocked Ibn Tumart, the future founder of the Kingdom of Rissani, and the student of the new masters went through hard times, encamped on the seaboard of the 'land of the infidels' without success. The city of the Hammadids must have been appreciably more spread out than the modern town, especially in the hilly section where the Plateau of the Ruins is situated. The names of seven or eight gates have come down to us. Some of these can be located: Bab Amalwan to the east, on the road leading to the Valley of Monkeys, Bab al-Bunud, on the site of the Fouka Gate, Bab al-Laws, in the same position, but lower down than the Bab al-Bunud. Outside the town, on both banks of the Soummam, stretched the famous gardens, planted in the twelfth century and restored in the thirteenth, the Badif, on the west bank, the Raff on the east. In 546/1152, Bougie was captured by Abd al-Mu'min and the last of the Hammadids set sail for Sicily. The ancient royal city became the chief town of an Almohad province subordinate to Marrakesh. Its downfall must have been painfully felt by its citizens. It is believed that the Almohads failed to win their affection, and one is tempted to attribute to this unpopularity of the new masters the choice of Bougie by the Banu Ghaniya, who landed there in the middle of the twelfth century in an attempt to restore the empire of the Almoravids.

Bougie was for the Banu Ghaniya merely an operational base. The Almohads were not slow to reconquer it and it remained under their rule thereafter until the collapse of the Almohad dynasty. From that time, Bougie and the region surrounding it became part of the kingdom of the Hafsids of Tunis. The remote position of this province seems to explain its rôle in Barbary from the thirteenth to the fifteenth centuries. This governorship, far from the capital, would have been bestowed by tradition on the heir to the throne, and, in spite of the distance, the army of Bougie on more than one occasion marched to Tunis to press the claims of a Crown Prince anxious to succeed to the throne without further delay. By virtue of its position as a frontier province, Bougie was coveted by the 'Abd al-Wadid sultans of Tlemcen, who attempted several times, though without success, to conquer it.

At the same time, Bougie remained an opulent mercantile town, into which Venetians, Pisans, Genoese, Marseillais and Catalans imported merchandise made in Europe and from which they exported local products, especially candied peel, wax, alum, lead and raisins. Meanwhile to the profits of trading were added the sometimes richer prizes of privateering. According to a famous work by Ibn Khaldûn (Hist. des Berberes, i, 619, trans., iii, 117), piracy from the year 761/1360 was carried out according to a well-tried method and with remarkable success.

The attack on the town and its capture by Pedro of Navarre in 916/1550 were entirely in the nature of reprisals. Bougie, now a Spanish town, remained so until 962/1555. During these forty-five years, its new masters went through hard times, encamped on the seaboard of the 'land of the infidels' without normal contact with the hinterland, threatened by the Berber mountain tribes and at the same time dreading the Barbary Corsairs who were blockading the coast. After a heroic stand, Don Luis de Peralta had to surrender the area, which had become terribly impoverished.

Bougie, subjected to the mistrustful authority of the Algerian Turks who kept in their own hands the practice and profits of privateering, was unable to recover from this decline. The town retained somewhat little importance by virtue of the karasta, the exploitation of timber for ship-building, which the masters of the Regency had supervised by
a local religious chieftain of the Amokran family. But the town profited little from this activity. "In Bollodh (Bol) were found the treasure room and the library, and the stone work is falling into ruins, for the Turks keep nothing in repair". In 1833, when the French troops, commanded by General Trezel, entered the town, it was nothing more than a rather sorry city of barely two thousand inhabitants guarded by a hundred and fifty janissaries.

BIDJNAWR (Bijnor), a town and district in the Rohilkhand division of the Indian State of Uttar Pradesh. The district has an area of 1,867 square miles with a population of 984,196, of which 36% are Muslims. The town has a population of 30,646 (1951 Census). Little is known of the district's early history. In 1399 it was ravaged by Timur. Under Akbar it formed part of the sarkar of Sambhal in the sāba of Dihd. During the decline of Mughal power it was overthrown by Rohillas under 'All Muḥammad. It contains the town of Nadžibbābūd founded about 1750 by Nagīb al-Dawla who became māsrīr of Dihd and whose son was the Rohilla leader Zābita Kāh. After the defeat of the Rohillas in 1764, Bidinawār was incorporated in Awadh. It was ceded to the British in 1801. During the 1875 insurrections Ḍaḥmā Kāh, a grandson of Zābita Kāh, was one of the formidable opponents of the British.

BIDLIS (Bitlis), chief city of the wālidāt of the same name, in eastern Anatolia. It stands on the river Bitlis, 25 km south-west of the westernmost point of lake Van (38° 20' N., 42° 5' E.), at a height above sea-level variously estimated between 1,400 and 1,585 metres. Known to the Armenians as Bagesh (Paghash) and to the Arabs as Badlis, it is referred to as Bidlis in old Turkish works. The city is in a relatively wide part of the deep and narrow valley cut in the eastern Taurus by the river Bitlis before it descends to the upper Dījaẓra. The narrow and straggling streets, with their stone-built, earthen-roofed houses, are ranged one above the other from the valley floor, covered with poplars and fruit-trees, to the bare slopes of the hills. The quarters of the city are separated one from another by the main valley and its intersections, crossed by stone bridges. Although the picturesque aspect of the city has always been admired by travellers, its location gives it a harsh climate: summer days are excessively hot, winter is rigorous and long, with heavy snowfalls. Rainfall is also heavy (about 1 metre annually), particularly in spring, whereas drought is common in summer.

The valley in which Bitlis stands affords the only route across the Taurus from the Van basin to the plateau of Diyarbakr and the plains of the Dījaẓra. By this road, from time immemorial, caravans have made their way from the south to Erzurum and thence to the Black Sea; this was the route taken by Xenophon and his Ten Thousand. Throughout history the rulers of Bitlis levied toll on passing travellers and took care to maintain control of the plain of Mugh, which supplied the food they could not find in their own barren mountains.

When and by whom the city was founded is not known. An ancient legend tells that it was Alexander the Great who entrusted to one of his commanders, a man called Liš, the task of building here an impregnable citadel. When the building was finished, Liš refused Alexander admission. Alexander besought the citadel but failed to force an entrance. Liš then explained to him how he had carried out his orders to the letter. He was pardoned, and the city commemorates his name. The city played an important part in Armenian history, and is frequently mentioned in the old Armenian sources (Gelzer, Geogr. Cypr., Leipzig 1890, 168), which are however silent about the date of its conquest by the Muslims, recording only that the region of Daron (Mugh) was taken by them in 641. Streck (EP, i, 55. Bidlis) mentions Arabic inscriptions on the walls of the citadel, but according to Lynch these were destroyed without ever being copied. Muslim historians relate that Ṣyād b. Ghamm, 'Umar's commander in the Dījaẓra, after securing the surrender of Ārzān went on to Bitlis and thence to Akhli (Ahat). The Patriarch of Ahat accepted peace terms and attached Ṣyād's return the Patriarch of Bitlis agreed to pay tribute on the same scale as Ahat (al-Baladhuri, Futūḥ, Cairo 1901, 184; al-Wākidl, K. al-futūḥ, Cairo 1302, ii, 152-154). It was not long however before the region reverted to Byzantine rule. Mu'āwiyā subjugated it again, but after his death it was once more lost to the Muslims till the reign of Ṣāḥib al-Maklī, whose brother was attached to the province of al-Dījaẓra. In the 'Abbāsid period it fell under the successive Shaykhīd, Hamdānī and Marwānī dynasties of Diyarbakr. In the time of the two last-named dynasties, when Byzantium recovered the Euphrates basin, the Armenian King of Vasporkaran (Bāsūfījan, the Van basin) threw off Muslim sovereignty and gave his allegiance to Constantinople, whereupon Bitlis, like Ahat, became a frontier-city. The Muslim onslaught brought some branches of the tribes of Bakr b. Wā'il and Tāḥhib to the region, and under Marwānī rule various Kurdish tribes spread over these parts, notably the Humaydī, to which the Marwānīs belonged. Nāṣir-i Khusrūw, who visited the region in 1046, the year before the great Turkish invasion, states (Safar-nāma, Berlin 1841, 86) that Arabic, Persian and Armenian were spoken at Ahat, and we may suppose that the same situation obtained at Bitlis. Fāhr al-Dawla Muḥammad b. Dīlusay, whom the Sādūḳs appointed to govern Dīyarbakr in ton, created Marwānī rule and distributed their lands and fortresses to Turks. Bitlis was given to Muḥammad b. Dīmaḵ or Dīmāl, whose descendants continued to rule it until 1588/1592, when it was seized by the amir of Ahat. In 1207 both cities fell to the Ayyūbids, who settled large numbers of Kurds in the region. Though Ahat was devastated by Dīslāl al-Dīn Khrāzīmshāh in 1229, the cities
of Van and Bitlis began a period of prosperity, Bitlis in particular becoming an important centre of learning until the Mongol invasion. After the fall of the Ilkhanids, the Ruzheki tribe of Kurds established a dynasty at Bitlis, which managed to maintain itself, despite many vicissitudes, till the mid-19th century, having acknowledged in its time the suzerainty of Timurids, Kara Koyunlus, Aq Koyunlus, Şafawids and Ottomans. Sharaf Khan, a 16th-century member of this house (whose Sharaf-name, completed in 1596, is a principal source for Kurdish history) claimed descent from the Ayyubids, while his grandson Abd al-Allah Khan told Ewliya Celebi that he was descended from the ʿAbbasids. Ewliya's visit was in 1655. His observations include the following. The bādī was exacted from caravans passing through the city went to the Khan. The bādādi of the plain of Mush had been bestowed by Murad IV on the Khan for life; out of it he paid the warden and garrison of the citadel. On the other hand, the dīşaya paid by the Jacobite and Arab raʾidy of the city was reserved to the koli (administrative division) of Van, and was collected by an ağa who came from Van at the beginning of every year. Some 70 tribes were subject to the Khan. Within the citadel there were 300 houses, but half the area was covered by the ruler's palace. In the 17 city-quarters were 5,000 houses. In the environs were thousands of orchards, all containing summer houses. Of the mosques, with a total of 110 mihrābs, the most important was the Sharafiyya, built by Sharaf Khan. Tavernier, whose visit was at the same period, writes that the Bey of Bitlis recognised neither Shāh nor Pādīshāh, and could put into the field a force of 20,000 cavalry. At that time the population was largely Kurdish and Armenian. The Diwan, it is recorded, could put into the field a force of 20,000 cavalry. At that time the latter were in the majority. According to the Jesuits who visited the city in 1683, the nominal vassalage of the Bey to the Ottomans was preserved only in that he sent them tribute on his accession (Fleurian, Estat présent de l'Arménie, Paris 1694). The power of the Kurdish princes was not broken by the Turks till 1847, though the city remained a Kurdish political and religious (Nakşbandi) centre during the turbulent 17th and 18th centuries. On the establishment of full Ottoman sovereignty, Bitlis formed a bādādi belonging to the sandjāk of Mush within the great wilāyät of Erzurum, but after the Russo-Turkish war of 1877-78 it was made into a wilāyät to emphasise the dependence of the region on the central government. The area of the wilāyät, which was divided into 4 sandjaks—Bitlis, Siirt, Mush and Genç—was almost 30,000 square kms., with an estimated population of 400,000. According to Cuinet, the central sandjak, with an area of 5,500 square kms., had a population of some 108,000; 70,000 Muslims, 33,000 Armenians, 4,000 Syrian Jacobites and 1,000 Yazidis. The sādīname for the year 1310/1892-93 shows the population of this sandjak as 77,000; 46,000 Muslims, the remainder Armenian. Lynch, who quotes the total, says it ought to be increased by 13 per cent to compensate for deficiencies in the registration. For the population of the city itself in the 17th century no reliable figures exist. Lynch estimated it at 30,000 at the time of his visit (1898): 10,000 Armenians, 200 Syrians, the rest Kurds. A Russian source of the beginning of the 20th century gives the number of houses in the city as 5,100: 550 belonging to Turks, 3,000 to Kurds, 1,500 to Armenians.

The staple industry of Bitlis in the 19th century was weaving, with its ancillary craft of dyeing. Other exports of the city and the surrounding country included gall-nuts, gum tragacanth, madder, tobacco, honey and livestock.

Till the troubles of the end of the 19th century, Turks, Kurds, Armenians and Jacobites had lived side by side in Bitlis. The Jesuits who founded a mission there in 1683 had been well received by the Bey. In the 18th century an Italian priest, Maurizio Garzoni, lived and worked among the Kurds for 18 years. An American Protestant mission was founded in 1858. The insurrection of the Armenians, the measures taken to suppress it, and the Russian occupation during the First World War all contributed to a grave reduction in the population and to the disappearance of industry. The population of the city in 1927 was 9,050, in 1950 11,152.

Early in the Republican period each of the 4 sandjaks comprising Bitlis wilāyät became a separate wilāyät. In 1929 Bitlis was attached as a bādādi to the wilāyät of Mush, nearly 70 per cent of the population of which were Kurds according to the 1935 census. Bitlis was restored to wilāyät status in 1936, and is now divided into 5 bādāds: Bitlis, Taftan, Ahlat, Mutki and Hizan, with an area of 5,482 square kms, and a population (1950) of 88,422.

Bitlis in IA, by Besim Darkot and Mürkımın Halil Yunaq, of which the present article is a shortened conflation.

(G. L. LEWIS)
He died in Istanbul, soon after Selim, in Dhu 'l-Hijja 926/Nov.-Dec. 1520, and was buried at Eyyub beside the mosque founded by his wife, Zeyneb Khanun.

His great history, the Hādgī Bīkhūt (Hādgī Khalīla, ed. Flügel, no. 2131, and nos. 2152 and 14406), the 'Eight Paradises', i.e. the reigns of the eight sultans from Oghmān to Bāyezīd II, is written in the most elaborate style of Persian ircraft, avowedly on the models of the histories of Djiwuaynī, Wāṣṣāfī, Mu'īn al-Dīn Yazdī and Sharaf al-Dīn Yazdī. Though it was highly esteemed both by Sād al-Dīn, who frequently refers to it (cf. especially i 159), and by Hāmmer-Purgust (cf. i XXXII), it is still unpublished. It was begun in 98/1502-3 and finished in thirty months; the last political event described in detail is the relief of Miḍīlī in 907, but the latest date recorded is 912. The long Khadīma, entirely in verse, which was written in Mecca (cf. Rieu, CPM 2193), describes the civil war at the end of Bāyezīd’s reign; it concludes with a Shīkāyat-nāma, in which Hādī relates his misfortunes. A continuation (dḥayl) to Hādī’s history, covering the reign of Selim I, was written by his son Abu 'l-Fadl (on whom see Babinger, 95 ff.). A Turkish translation of the Hādī Bīkhūt was made by a certain 'Abd al-Bākī Sa'dī in 1146/1733-4 at the command of Maḥmūd; it is not altogether reliable (cf. M. Ẓūkūr in Iṣlām, XIX (1931) 138). The history of Kemāḏī Pāgādashā [q.v.], sometimes referred to as of Damlū’s reign; it concludes with a tfakk al-Yalṣīn, of Kemāḏī’s time.

He was made by a certain 'Abd al-Bakī Sa’dī in 1146/1733-4 at the command of Maḥmūd; it is not altogether reliable (cf. M. Ẓūkūr in Iṣlām, XIX (1931) 138). The history of Kemāḏī Pāgādashā [q.v.], sometimes referred to as of Damlū’s reign; it concludes with a tfakk al-Yalṣīn of Kemāḏī’s time.

The MSS in Istanbul, including autographs dated 919, and written to court, and Shāh Ismā’īl II, on his accession to the throne in 984/1576, conferred upon him the governorship of the province of Naḥāvīān and Shīrwān, with the title of amīr al-umard of the Kurds. At the time of the invasions of these regions by the Turks under Murād III in 986/1578, he joined the army of the victorious Khushar Pāgsha and in this way was placed on the throne of his ancestors at Bidlīs. In 1005/1596-7, he abdicated in favour of his son Shams al-Dīn Khān, and commenced the task of writing a history of the Kurds in Persian, under the title of Sharaf-nāma, a work in 15 chapters, of which the first of which are devoted to the most recent events and princes and the last (part 2) to the Persian and Turkish rulers of his time. This work was translated into Turkish first by Muḥammad Bey b. ʿAlāmī Mīrzā in 1078/1667-8, and later by Shamsī in 995/1684 (autograph MS. in the Bodleian). The Persian text was published by Veliaminof-Zernof (Sharaf-Nameh, or history of the Kurds, by Scherfel, prince of Bidlīs, published . . . translated and annotated . . . 2 vols., St. Petersburg 1860-2), and a reprint of the first part appeared in Cairo in 1931. F. B. Charmoy has translated it into French (Cherfel-Nameh, or history of the Kurdish nation, by Cherfel ou’dine . . . translated with a commentary . . . 2 vols. (4 books), St. Petersburg 1868-75).

(Said Naficy)

BIDPAY [see Kālīla wa-dīmnā]

Bigha (the Greek Βίγχα), a town in north-
western Asia Minor and now the centre of a hādād in the province of Čanāk-Ḵāle, is situated on the Kōdja Čay, i.e., the ancient Granicus, about 15 miles from the Sea of Marmara. At the mouth of the Kōdja Čay stands Kara Bigha (the πίστας of classical times), which is the port ("iskele") of Bigha. Bigha, under Ottoman rule, was at different times a sandjak of the eyalett-i Bahr-i Sefid (the province of the Kapudan Pāghā or High Admiral of the Ottoman fleet), a sandjak of the vilâyet of Khudawendīgār (Brusa), and still later a hādād in the Mutesarffillik of Bigha (the administrative centre of which was, however, not Bigha itself, but Kaʿl-ei Sulṭānyye, i.e., Čanāk-Ḵāle). The town had in 1945 about 8150 inhabitants.

(John V. Parry)

BIGHA [see misāḥa]

Bihāfrīd B. Farwardīn, an Iranian religious agitator who, in the later period of Umayyad rule—about 129/747—set himself up as a new prophet at Khawāf in the district of Nishāpūr. He gathered about him a large following and was put to death by his disciples on the orders of Abū Muslim in 131/749. Before this he is believed to have lived in China for seven years and on his return, to have revealed himself to certain people as resurrected and descended from heaven. Legend also has it that he pretended to be dead and remained for a year in the tomb which he had had built for himself. Enunciating his doctrine in a Persian scripture and claiming that he was in essence a Zoroastrian, he nevertheless adopted certain practices and prohibitions which seem to be inspired by Islam. Among these were the prohibition of wine, animals not ritually bled, and consanguineous marriages, the abolition of the sāmāna [δαμάν], the prescription of seven daily prayers to be offered up facing the sun, and obligatory alms-giving.

Doubtless, he intended by this compromise to give a new lease of life to his old religion. But Abū Muslim, incited to turn against him by the Mubādhī who did not approve of this reform and realising moreover the danger which this movement represented for the new converts, forced Bihāfrīd to rally to Islam and to support the ʿAbbāsīd cause. As, in spite of this, the reformer continued his preaching, he was later executed. Adherents of his doctrine, awaiting the return to earth of their master, were still to be found in the 4th/10th century.

(Samuel Ovendale)

BIHĀR, a province of India lying between 23° 48' and 27° 31' N. and 83° 20' and 88° 32' E., bounded by Uttar Pradesh on the west, Nepal on the north, Bengal and East Pakistan on the east and Orissa on the south; area, with Čhotā Nāgpur, 67,164 sq.m., population 38,784,000. The dialects of the predominantly Hindu population, Bhijpurī, Maṭhilī and Māghāl, are referred to as Bihārī, and are more akin to Bengali than to Hindi; the latter is, however, the official language of administration and education. The region is now of major economic importance on account of its coalfields and heavy iron industries.

Bihār—which takes its name from the now unimportant town of Bihār, surrounded by Buddhist monasteries (Skt. vihāra)—was in the British period from 1765 within the Lieutenant-Governorship of Bengal, later joined administratively with the now independent Orissa [q.v.]. This lack of independence reflects the position of the region—whose boundaries have only been formally defined in recent years— from the earliest days of Islamic supremacy in India, and its history is one of individual governors and towns rather than of dynasties and regions. Monghyr (Mungīr), for example, was taken during ʿAbīṭyār al-Dīn Muhammad b. Bakhāyār Kājah's raids on Bihār in 587/1193 and held by him under the Delhi sultan Kūth al-Dīn Aybak; it was annexed to Delhi by Muhammad b. Tughluk in 730/1330, belonged to Ḫiānpur (Jaunpur) from 799/1397, reverted to Delhi when overrun by Sikandar Lōdī in 893/1488, and was later held by the kings of Bengal before becoming subject to the Mughals. Parts of Bihār did form a separate administrative unit in the 7th/13th centuries (Shams al-Dīn Iltīmīsh established a governor in Bihār in 622/1225); under Akbar in 990/1582 it formed a sūba of eight sarkārs, subordinate to the sūba of Bengal. The capital remained at Bihār until transferred to Patnā by Shāh Shāh Shīrī in the 9th/15th century. The importance of the region was as a buffer between Awadh and Bengal until the Mughal period, when the emphasis was as a line of communication between them, as many fine bridges of the Mughal viceroys testify.

2. Monuments: There is no particular 'Bihārī' style of Indo-Islamic architecture. The finest group of buildings is at Sahsārām, including the justly famous mausoleum of Shāh Shāh (inscription of 952/1545) standing 50 m. high in a large artificial lake; its architect, Aliwāl Khān, had been a master-builder under the Delhi Lōdīs, but his treatment of
the octagonal mausoleum transcends any of the Lodl conceptions. Sher Shah obtained the fort of Rohtas garrison from its Hindu Rādīa in 946/1539, and it is attributed to the Dālānī Maṣjīdt; the reconstructed fortifications, the palaces, Habash Khan's tomb and mosque, etc., date from the viceregency of Rādīa Todar Māli, the long barrel-vault traversing the central bay of the Dīwan of this early Mughal style appears Mughal; Rādīa Todar Māli is known to have repaired the fortifications in 988/1578.

The two forts of Palmāw, built by local Cēro Rādīās in the 11th/17th century, were taken by the Mughal governor Dā'ūd Khan Kūrāyshī, who erected a mosque (1070/1660) and other structures; the Rānīwāl Shāh Darwāzpān, the tomb of Makhdum Monghyr has been mentioned above: the fort is reputed to have been built by early Bengal kings, but the style appears Mughal; Rādīa Todar Māli is known to have repaired the fortifications in 988/1578.

Bibliography: There are no primary sources specifically dealing with Bihār; for the various historical incidents involving Bihār see Cambridge History of India, Vols ii (1928) and iv (1937) (full bibliographies); also Imperial Gazetteer of India, Vol. viii, Oxford 1908, and, for local histories, relevant volumes of the Bihar and Orissa District Gazetteers, Patna c. 1930; some are revised versions of the former Bengal District Gazetteer.

For the monuments of Shēr Shāh Sūrī, see A. Cunningham, ASI Report, xi, 1880; Percy Brown, Indian Architecture (Islamic Period), Bombay n.d., Chap. xvi; H. Goetz, The mausoleum of Shēr Shāh at Sasaram, in Ars Islamica, v, i, 97; for other monuments also, ASI Annual Report 1923-3, 34-41, and (most important, with full descriptions and histories of monuments) Maulvi Muhammad Hamid Kuraishi, List of Ancient Monuments ... in Bihar and Orissa, ASI, NIS Vol. li, Calcutta 1931, 54-66, 139-141, 146-191, 197-202, 207-219. (J. Burton-Page)
Kubadh", a Sassanian king who reigned in the 5th century A.D. The districts bordered, to the south, on that of Kula, and on the Great Swamp of the Lower Euphrates. The three districts, sometimes referred to jointly as the Bihkubadhat, were those of Upper, Middle, and Lower Bihkubadh. The Upper district contained six sub-divisions (tassudi), those of the village and ruins of Babil (Babylon), Kutarniya, Upper and Lower Al-Talhiliga, *Ayn al-Tamr, and another. Middle Bihkubadh contained four subdivisions, those of the Badat Canal, of Marz and Barballsam, of Barusama, and of Nahr al-Malik. Lower Bihkubadh had five subdivisions, including those of Burat Badahl and Nistar.

BHURZ (Amir), son of Amir Rustam and, like him, chief of the Donboll. A loyal ally of the Safawids, he took part in the war between Shah Tahmasp and Sultan Sulayman al-Kâni in 1538. He died in 985/1577, at the age of 90, after having been in power for 50 years. His šâheb was Sulayman Khâlija. (B. Ninkite)

BHURZ KHân, son of Shaykh Bandar Khân, amir of the Donboll. He was known under the name of Sulayman Khân al-Thâni. At the time of Sultan Murad's attack on Adharbâjyan, he distinguished himself in the army of Shâh Safi. He died in 1041/1631.

*Bibliography:* *M. E. Zaki,* *Mashidhir al-Kurd wa-Kurdistan,* 144; *Târîkh-i Duwal wa 'l-imrâ' al-Kurdîyya,* 386, 387. (B. Ninkite)

On the basis of the existing work of Bihzad, one can assume that he was born during the decade 1450-60. Mirzâ Muhammad Haydar Dughlât, Dust Muhammad, and Kâdi Ahmad describe him as a pupil of Amir Rûh Allâh, known as Mirzâ Naḵkâš of Harât, the librarian of Sultan Ḥusayn Bâykarâ, who brought up the young orphan; the Turkish art historian Âli states, however, that his teacher was Pir Sayyid Ahmad of Tabriz; lastly Dowâhâr mentions Khâlîf Mirzâ as an artist whose style Bihzad continued (*Tûnsh-i Dâhâhâr*g, trs. Roger and Beveridge, ii, 116). He became recognised very quickly, and received great artistic opportunities through his first patron Mir *Allî Shâr Nawârâd* and, from some time before 893/1488 on, through the Timurid Ḥusâynu Bâykarâ, at whose court in Harât gathered the intellectual élite of the time with Nawârâd, Dâmîn and Khânândâr at their head. Bihzad remained in Harât after the dynasty was overthrown by Muhammad Khân Shaybânî (1507). Bâbur says that this prince had the presumption to correct Bihzad's miniatures. He moved, however, to Tabriz, the Safawid capital, with the latter's conqueror, Shâh Ismâ'il. The favour which he enjoyed with the latter is evident from the story told by *Âli* of Ismâ'il's anxiety about Bihzad during the campaign against Sultan Selim I, in 1534. The distinction in which he was held became even more evident from the fact that on 27th Dümâdâd 1528/1522 he was appointed head of the royal library and placed in charge of all the librarians, calligraphers, painters, gilders, marginal draughtsmen, gold mixers, gold beaters and lapis-lazuli washers. This document disproves the statement of Kâdi Ahmad that Bihzad remained in Harât until the beginning of the reign of Shah Tahmasp (1524). Under Shâh Tahmasp, Bihzad also received numerous marks of honour and was engaged along with Sultan Muhammad and Aka Mirak in the royal library. In the *Laid'ai-nâmâ* of Khâñ Sultan Muhammad (c. 927/1520; Brit. Mus. Add. 7,669, fol. 96) is a story which illustrates the aged Bihzad's manner of working: he took a Turkish assistant, Darwîsh Muhammad Naḵkâsh, as a colour-preparer, as his pupil and finally entrusted him with his own works. As other pupils are mentioned by Haydar Mirzâ: the portrait painter Kâsim 'Ali, Mas'ûd and Mullâ Yusuf; by 'Âli: Shâykhzâda of Khurâsân and Aka Mirak; by Kâdi Ahmad: Dust-i Dîwânî and the father of the painter Mu'azzafer 'Ali; he also called Bihzad a contemporary of Yârî Mughâshîb of Harât which is borne out by the fact that they jointly worked on the *Bâdân* of 893 H. in Cairo (see below). Kâdi Ahmad places Darwîsh and Kâsim 'Ali into a slightly earlier period than Bihzad, which would make the master-student relationship doubtful. Finally Iskandar Munshî states that Mu'azzafer 'Ali was one of his pupils. According to a chronogram given by Dust Muhammad, Bihzad died in 942/1536-1537 and was buried in Tabriz beside the poet Shâykh Kamâl of Khudjand; according to another tradition, he died earlier, in 1533-1534. Still another tradition preserved by Kâdi Ahmad has it that he died in Harât and that he was buried in the neighbourhood of Küh-i Muhktár within an enclosure full of paintings and ornaments. In the Yıldiz Library in Istanbul is an alleged portrait miniature which shows the aged Bihzad as an unassuming, apparently shy man in Safawid costume (A. Sakisian, *La miniature persane,* Paris-Brussels 1929, fig. 130).

The older sources yield little information for our knowledge of Bihzad as an artist, however much they praise him as the greatest of his age. Khânândâr's extravagant language seems to emphasise his great refinement, minute perfection and power of lifelike representation. Haydar Mirzâ compares him with his teacher Mirak, whose art is riper although not so finished; also with Shâh Mu'azzafer who seems to have been held in almost equal esteem, whom...
Bihzād surpassed, however, in control of the brush, in drawing and in figure composition, without attaining his delicacy. Kādī Aḥmad stresses his sense of proportion and he mentions the excellence of his bird images and that he was fluent in his charcoal drawings. Bābur praises his art as very delicate, especially emphasising the fact that he drew bearded figures admirably, while his beardless figures were not so good, and adds that he exaggerated the length of the double chin. Bābur’s successors on the Mughal throne were also among his admirers, eagerly endeavoured to get his works for their libraries and frequently mention the prices they paid (c. 3-5,000 rupees). His works had, however, already previously been collected, as some of his paintings formed part of an album of the Šafawīd prince Sultan Ibrāhīm Mirzā (d. 984/1577). Diāhāngīr is one of the first to mention the tradition, also recorded elsewhere, that Bihzād was specially distinguished for his drawing of battle-scenes. As a result of the general esteem in which he was held Bihzād’s name finally became proverbial. According to Kādī Andamir he should be put alongside of Mānī, the other traditional creator of incomparable masterpieces, while in typically Persian hyperbole, Kādī Aḥmad exaggerates this further by stating that Mānī would have imitated him had he known of him. All, however, hints that Bihzād’s success was to some extent due to the influence of his patrons. This presupposes intrigues and jealousies which may account for the fact that Bihzād is not properly listed in the account of Persian painters and calligraphers given by the Šafawīd Prince Šām Mirzā in his Tuhfa-yi Šāmi (M. Mahfuz-ul Haq, *Persian Painters, illuminators and calligraphers, etc. in the 16th century, A.D.*, in *Journal & Proceedings*, Asiatic Society of Bengal, New Series, vol. 38, 1932, 239-42).

Modern research has been mainly concerned with identifying Bihzād’s original works. It has been to some extent successful, especially since the London Exhibition of Persian Art in 1931 at which a large number of pictures ascribed to Bihzād were brought together. It is, however, not yet possible to isolate him completely from others in his artistic development and characteristic qualities, as a sufficiently large number of works have not yet been definitely attributed to his predecessors and contemporaries. The problem is greatly complicated by the fact that as a result of Bihzād’s fame his signature has been wrongly added to miniatures for centuries, be it for financial profit or to provide a collector with a page by the celebrated painter; or his works have been copied, including the signatures, either in toto or in parts, or they have been finished or restored after his death.

The basis for our actual knowledge of Bihzād’s work is provided by the paintings in the *Būsidn* MS. finished in Raḍāj 893/June 1485 in Harāt, in the Egyptian National Library, Cairo. It was written for Sultan Husayn Bāykara by Sultan ‘All al-Kāthī, illuminated by Yārī, and it has one double frontispiece miniature (with a now defaced signature) and four single-page paintings, dated 893 and 894. Two of the latter have Bihzād’s name in the architectural decoration, so that they could not possibly be a later addition, and 2 other signatures are so inconspicuously placed and modest in tone that they too seem to be genuine. As all paintings are in the same style and of the same quality, dated nearly universally as authentic works of the master. They prove to be the fulfilment of the Timūrid style which is shown to perfection. These paintings are most skilfully and harmoniously composed, also in relation to the inserted text units. Within the pictorial space which is treated according to the concepts of the period the none-too-large figures are well distributed in their proper numbers. The rich pigments are of a wide range and applied with a highly developed colour sense. They reveal that, on the whole, Bihzād seems to have preferred cool colours, such as blues and greens, particularly in interior scenes, but they are always balanced by complementary warm colours, especially a bright orange. All the units of the design fit into a decoratively conceived all-over picture which is perfectly executed. The branches of trees in bloom, the richly decorated tile patterns, and the designs on the carpets reveal in particular the artist’s decorative sense and the delicacy of his work. Its realism distinguishes it, however, from the paintings of the previous period. This is apparent in the iconography which is no longer purely of courtly nature and primarily devoted to the manly deeds and loves of kings; it brings in addition and on the same level everyday events (e.g., the odd behaviour of a drunken prince, the *ṣūdā* at a mosque, mares nursing foals in a stud farm, etc.) and shows also a concern for the activities of persons of lower social standing (a bawōš drunkenly chastising an insolent towerer, servants bringing food, peasants at work, etc.). Furthermore the figures are no longer mere types, puppets with mask-like faces, but are individualised and often shown full of spontaneous movement or with a sense for the dramatic. Even when they are shown in repose, their attitude is natural.

Since none of the other works connected with Bihzād has a safe signature, though some of them carry attributions dating from the first half of the 16th century, only their stylistic aspect—the perfectly executed combination of the decorative and the realistic—can serve as guide to other true Bihzādian paintings. Some additional help is provided by the custom of the period to work with stencils, so that individual figures known from a well established Bihzād painting can be traced in other, more uncertain works, although such a procedure could also have been done by a student. Unfortunately, our present ignorance of Bihzād’s paintings prior to 1485 and after 1500 leaves us in doubt about the master’s activities in his youth and old age. In view of so many uncertainties, it is natural that scholars have disagreed about certain attributions, but even if not all of the following works are by the master himself, they are at least from his school.

3. *GWādi*, written by Sultan ‘All Kāθī, Muḥarram 893/Jan. 1486. M. 4.4. Some of the miniatures are modelled on the famous *Mystics in Landscape*, but these have been accepted as authentic works of the master (e.g., “Ṣu’dāt and the youth of Kāshgār”) most likely by Bihzād. The drawings
of these 3 MSS. of 1485-86, if they are indeed by Bihzād, would represent the work of his youth, which has not yet quite reached the quality of the Care Bēstām MSS.

4. Double miniature “Sultān Ḥusayn Bāyḵārā with his Harīm and Retinue in a Garden”, ca. 1490-1495. Tehran, Gulistān Palace Library. Very close to Bihzād’s style, goes at least in part back to him.

5. Nīrāmī, Khamsa, text dated 846/1442, British Museum, Add. 25,900. 19 miniatures of later date, one dated 989/1583 which is the approximate date for 4 miniatures in Bihzādian style. Three paintings have small attributions probably genuine (fols. 121v, 161t, 231t), a fourth, unsigned on fol. 114t, (“Mādīnūn before the Ka’ba”) of such high quality that it could also be by Bihzād.

6. Nīrāmī, Khamsa, written for Amlī ‘Alī Fārsī Barlās, one painting dated 900/1494-95. British Museum Or. 6810. 16 miniatures attributed to Bihzād by Djāhāngīr and most likely either by him (fols. 32v, 135v, 190t, 214t, 225v, 233v) or by his students (fols. 27v, 72v, 93t, 106v, 128v, 132t, 144v, 154v, 157v, 175v).

7. Sharaf al-Dīn ‘Ali Yazdī, Zafar-nāma, probably written for Sultān Ḥusayn Bāyḵārā; according to a later colophon finished in 872/1467 by Sīrī ‘Allī, but six double-page paintings date from 1490s. John Hopkins University Library (R. Garrett Coll.). 8 (sic) miniatures attributed by Djāhāngīr to the early period of Bihzād. All paintings most likely by Bihzād, though in parts, possibly in collaboration with students; several show later retouches, probably Mughal.

8. Circular miniature “Fir and Youth in Landscape” in an Anthology dated 930/1524 written for Wazār Khānādā Malīk Ahmad. Washington, Freer Gallery of Art, no. 44, 48. The painting which may be earlier than the MS. closely paraphrases a miniature in no. 2. According to the introduction, the owner, a high official of the Šafawīd court, regarded it as a genuine work at a time when Bihzād was alive and connected with the royal library. It seems therefore to be a work of the master’s old age which would explain its weaker and repetitive character; alternatively, it may be a copy by a student, supervised by Bihzād and therefore regarded as his own work.

9. Single painting “Two Fighting Camels with Attendants”, Tehran, Gulistān Palace Library. According to its inscription this is a work by Bihzād when he was 70 years old. In 1017/1608 Djāhāngīr took it to be an authentic picture. A mid-15th century version of the same theme shows that this is much weaker than its prototype (R. Ettinghausen, Some paintings in four Isphahan albums, in Ars Orientalis 1, 1954, 102, figs. 3 and 63). Nos. 8 and 9 would therefore have to be regarded as possible works of Bihzād’s declining years.

Works mentioned in literature but not now known are: a Khamsa of Nīrāmī written by Mawlawī Mawdūd Nīghāpūrī for Shāh Tahmāsp, a Timūr-nāma written by Sultān ‘Allī Māshhādī, and the paintings in the album of miniatures for which Khwandāmīr wrote the preface and in the one owned by Sultān ‘Ībrāhīm Mīrzā.

Bihzād’s influence is first seen in his pupils, of whom some, like Kāsim ‘Allī and Aḥā Mīrah, almost attained their master’s level. In spite of the fact that and the change in style, this very soon under the Šafawīs, there was in the first three decades of the 10th/16th century a transitional style which shows many features of Bihzād’s work; a characteristic example is an “All Shīr Nāmah” MS. of 1526 (Bibl. Nat., Suppl. turc, 316). Harāt painters carried Bihzād’s style to Bukhārā where it became established at the Shaybahcourt. A MS. of ‘Abbās’s Mīhr-u Muḥāṣarī, copied in Bukhārā in 929/1523 is a good example of how much more faithful the Bihzādian style was preserved there than in Tabrīz (Freer Gallery of Art, nos. 32.5-32.8). Here the tradition of Bihzād and the Harāt school survived till beyond the middle of the 16th century. By the immigration of artists from centres still under Bihzād’s influence, the Harāt style and Bihzādian tradition were brought also to India.

Independently of the general development of style we find Bihzād’s miniatures and motives more or less faithfully copied down to the 17th century. “Dārā’s Meeting with the Horseherd” in the Cairo Būstān is found in Būstān MSS. of 1535 (Paris, Cartier collection) and 1556 (Bibl. Nat., Suppl. pers. 1187), and others. The “Fighting Camels” recur in many Indian and Persian miniatures, on a Persian carpet with animal designs of the 17th century (Berlin, formerly Schloss-Museum) and on a green glazed faience bottle of about 1600 (London, Victoria and Albert Museum), while as late as 1028/1619 and 1035/1626 ‘Abbās reproduces designs thought to be by Bihzād (Paris, Vignier collection and Gulistān Palace Library).

conquest one of the richest districts in the province of Damascus, one may mention, besides many sites renowned for their ancient ruins and cave carvings, the Umayyad residence of Ayn al-Djarr [q.v.], the straggling village of Karak Nûh, which was the Mamluk capital, and the little prosperous villages of today such as Zahla. The most important centre has always been Ba'labakk [q.v.] although in Mamluk times the authority of this citadel, which had for a long time commanded the whole of the country, had been considerably curtailed, and the neighbouring countryside, divided into two districts, had been entrusted to an independent governor. From that time, alongside the niyyâb of Ba'labakk there were two wilâyâhs, the Bîkâ' al-Ba'labakkî and the Bîkâ' al-'Azîzî.

The last name is to be connected according to Arab historians with that of a son of Salâh al-Dîn, al-'Azîzî [q.v.], and according to certain modern scholars with that of the ancient local divinity Asiys. Perhaps one can also see traces of ancient cults in the numerous popular dedications to which toponymy and monuments bear witness, and which evoke above all either the story of Noah and the memories of the flood, or the figure of Ilyâs, a hermit par excellence and desirer of the cult of Ba'âl.

BIBKASI [see BINBASH].

BILAD-I THALÂTHA, the three towns, a term employed in Ottoman legal and administrative usage for Eyyûb, Galata, and Üskûdar, i.e., the three separate urban areas attached to Istanbul. Each had its own kaçal, independent of the kaçal of Istanbul, though of lower rank. Every Wednesday the kaçals of the ‘three towns’ joined in the grand kaçal of Istanbul in attending the Grand Veizir. This judicial autonomy of the three towns goes back to early Ottoman times, probably even to the conquest. The three towns also enjoyed some autonomy in police matters, being subject not to the police jurisdiction of the Aga of the Janissaries, like Istanbul proper, but of other military officers.

BILÂL B. ABI BURDA [see ABU BURDA].

BILÂL B. DJARIR AL-MUHAMMADI, Abu 'l-Nâdî, Zurayyîd [q.v.] vizier and governor of 'Adan. He was appointed governor of the city by the Zurayyîd prince Sâbî b. Abu 'l-Sûfîd at the time of his war against his cousin and co-ruler of 'Adan, the Mas'ûdî, 'Ali b. Abî 'l-Qâhir, 531-32/1136-38. With the death of Sâbî in 533/1138-39 his son and successor, al-Azzî, intensely jealous of Bilâl, intended to have him put to death, but died himself in 534/1139-40 before this could be achieved. At his sudden demise Bilâl had a younger son of Sâbî's, Muhammad, brought from Ta'izz, where he had gone into concealment from the hatred of his brother, placed him on the throne over the young

Figure C: "Mosque Scene". Miniature by Bihzâd in a manuscript of Sa'di's Bûstân, written in 893/1488. Cairo, Egyptian National Library. (Courtesy, Egyptian National Library)

Figure D: "Battle Scene". Miniature by Bihzâd in a manuscript of Nizâmi's Khamsa, painted at the end of the XVth century. British Museum, Add. 25900, fol. 231v. (Copyright British Museum)
Figure E: "Iskandar and the Seven Sages". Miniature probably by Bihzād in a manuscript of Nizāmī's Khamsa, of 900/1494-95. British Museum, Or. 6810, fol. 214r°.

(Copyright British Museum)
sons of al-A'azz, and married him to his daughter. As a reward for his loyalty Bilal was appointed vizier of the new unified city, a post which he retained until his death in 546-47/1151-52. Following the accession of Muhammad b. Sa'da, Bilal was accorded the honorific titles of al-Shaykh al-Sa'id al-Mu'awfak al-Saddiq by the Fāṭimid caliph al-Hāfiz. He is reported to have amassed a considerable fortune while in office, all of which reverted to the ruler upon his death. Two sons of Bilal followed him in the office of vizier until the fall of the dynasty with the Ayyūbid conquest of South Arabia (569/1173).

BILĀL B. RĀBAH, sometimes described as Ibn Ḥāmama, after his mother, was a companion of the Prophet and is best known as his Mu‘ādhgin. Of Ethiopian (African?) stock, he was born in slavery in Mecca in the clan of Jumah, or in the Sarāt. His master is sometimes given as Umayya b. Khalīfah [q.v.] but also as an unnamed man or woman of the same clan. He was an early convert—probably of dark complexion, with a thin face and thick hair with full respect and honour. He emigrated to Medina, where at first he suffered from fever along with Abū Bakr and a number of Meccan Muslims. The Prophet established a tie of brotherhood between him and Abū Ruwayhah of Khāṭam, whom Bilāl later named as his representative for receiving his pension when he himself decided to campaign in Syria. As a result of this tie of brotherhood, 'Umar attached the list of African pensioners to that of the tribe of Khāṭam, and Ibn Išākh records that that was the case in Syria in his own days.

Bilāl became “official” mu‘ādhgin when the call to prayer was first instituted in the first year of the Ḥijra. He accompanied the Prophet on all military expeditions. At Badr he caused the deaths of Umayya b. Khalīfah and his son, both of whom had already surrendered, but their captor was completely powerless to defend them against the determined attack led by Bilāl.

Although best known as his mu‘ādhgin, Bilāl was also the Prophet’s “mace-bearer” [see 'Anāza], his steward (Khidrīn), his personal servant, and on occasions, his “adjutant.” The climax of his career as a mu‘ādhgin came when Mecca fell to the Muslims and Bilāl called the faithful to prayer for the first time from the roof of the Ka'ba.

After the death of the Prophet, Bilāl agreed to act as mu‘ādhgin to Abū Bakr but refused a similar request from 'Umar, and joined the campaigns in Syria, where he spent the rest of his life. Some sources say that he refused to act in that capacity after the Prophet’s death and called publicly to prayer on only two occasions afterwards—when 'Umar visited al-Djābiyya, and when Bilāl himself paid a return visit to Medina and was requested to call the adhākhīn by al-Ḥasan and al-Ḥusayn. Both were moving occasions.

Bilāl seemed to have attained high prestige during his lifetime. An Arab tribe accepted his brother as a suitor in spite of his bad character, and (according to Tabāri, i, 2527) when 'Umar sent a representative to Syria to investigate the source of certain donations made by Khālid b. al-Walīd, Bilāl lent support to both the diffident commander Abū 'Ubayda and the Caliph’s representative, by himself removing Khālid’s turban and demanding an answer. When a satisfactory explanation was given, Bilāl restored Khālid’s turban with full respect and honour.

He is described as being tall and thin with a stoop, of dark complexion, with a thin face and thick hair strongly tinged with grey. The date of his death is given variously as 17, 18, 20, or 21 (638, 639, 641, or 642) and his place of burial is stated as Aleppo or, more probably, Damasc or Darayyā.

BILAWHAR WA-YŪḌĀṢAF, heroes of the Kitāb Bilawhar wa-Yūḍāṣaf (Būḥāṣaf), an Arabic work deriving ultimately from the traditional biography of Gautama Buddha, and subsequently providing the prototype for the Christian legend of Bartholomew and Josaphat.

Contents of story. To the long childless king Janaysār, a pagan ruler of Sollabat (i.e., Kapilavastu) in India, a son is born by miraculous means. The king names him Yūḍāṣaf (better: Būḥāṣaf = Bodhisatta). An astrologer predicts that the prince’s greatness will not be of this world; the king therefore confines the child in a city set apart, to keep him from knowledge of human misery. Growing up, Yūḍāṣaf frets at his confinement and insists on being allowed out. Riding forth, he sees two infirm men and later, a decrepit old man, and learns of human frailty and death. The holy hermit Bilawhar of Sarandib (Ceylon) then appears in disguise and preaches to Yūḍāṣaf in parables, convincing him of the vanity of human existence and the superiority of the ascetic way. Bilawhar spurns renown and riches, indulgence in food and drink, sexual pleasure and all fleshly delights; a vague theism coupled with belief in immortality is preached, but no specifically Islamic dogma advanced.

King Janaysār is hostile to Bilawhar and opposes Yūḍāṣaf’s conversion. In spite of the efforts of the astrologer Rākṣah and the pagan ascetic al-Bahwān, Janaysār is overcome in a mock debate on the faith and is himself won over. Yūḍāṣaf renounces his Islamic dogma advanced.

King Janaysār is hostile to Bilawhar and opposes Yūḍāṣaf's conversion. In spite of the efforts of the astrologer Rākṣah and the pagan ascetic al-Bahwān, Janaysār is overcome in a mock debate on the faith and is himself won over. Yūḍāṣaf renounces his Islamic dogma advanced.

Sources. The Kitāb Bilawhar wa-Yūdasaf is not a direct translation from any Indian Buddhist work, but a syncretic compilation built round episodes in the legendary life of Buddha; it embodies parables of extraneous provenance, including the New Testament parable of the Sower. The narrative framework contains sections reminiscent of such works as the Buddha-carita, the Mahāvamsa, the Lalita-tīrata and the Jātaka Tales. Note that in the authentic tradition, the Buddha had no teacher, however, the ascetic preacher Bilawhar figures in the fourth Omen, where the Buddha-elect encounters in Kapilavastu one who had become a wanderer “for the sake of winning self-control, calm, and utter release”.

Early clues to the story’s transmission to the West are provided by Central Asian Buddhist-Sogdian texts, where Bodhisatva is shortened into the form Petyeś, i.e., Būdhasaf, and by the Manichaean fragments recovered from Turfan in Chinese Turkestán. Le Coq published (SBP, Ak. W., 1909, 1202-18) a Manichean Turkish fragment containing the encounter of the Būdhasaf prince with the decrepit old man; the same scholar published (Türkische Manichäische aus Chotscho, 1, 5-7, in Abh. Pr. Ak. W., 1911, Anhang) and Radirov and Oldenberg (Izn. Imp. Akad. Nauk, 6th ser., VI, 1912, 753-3, 779-82) elucidated another, containing the story of a drunken prince who mistakes a corpse for a maiden, later incorporated in the Ibn Bābhūya version. Of particular importance is the discovery, communicated in 1957 by W. B. Henning to the 24th International Congress of Orientalists, Munich, of a fragment in the Berlin Turfan collection comprising portions of 27 couplets of an early Persian metrical rendering, in which the heroes’ names occur in the forms Bylasah and Būdysaf.

This fragment, containing part of Bilawhar’s exhortation to Būdhasaf and of the dialogue concerning Bilawhar’s age, is part of a manuscript written not later than the first half of the 10th century A.D. The occurrence of the Iranian name-form Būdysaf, as opposed to the Arabic Būdhasaf with -ā-, in the second syllable, shows that this version belongs to the earliest line of transmission; it has been tentatively attributed to Rūdaki (g.v.) or his school. These indications, pointing to a Central Asian environment and a Middle-Iranian language medium for the early development of the Bilawhar and Yūdasaf romance, are supported by Yūdasaf’s inclusion, together with Mānā, Bādāysān, Māzdak and others, in a list of false prophets condemned in ‘Abd al-Khāb b. Ṭāhir al-Baghdadī’s treatise Al-fārāk bayn al-firāq (ed. Muḥammad Badr, Cairo 1328, 333; pt. II, trans. A. S. Halkin, Tel-Aviv, 1933, 200-1). Authorities such as al-Birūnī (Chronology of Ancient Nations, trans. Sachau, 186-9) connect Būdhasaf with the Sabaeans, who were supposed to identify him with both Enoch and Hermes Trismegistus; Būdhasaf was also represented as having invented the Iranian alphabet.

Versions of the work. Among the books translated in early ‘Abbāsid times from Pehlevi into Arabic by Ibn al-Muṣaffā (g.v.) and his school, the Fihrist lists (305) the Kitāb al-Budd, the Kitāb Bilawhar wa-Yūdasaf (Būdhasaf) and the Kitāb Būdhasaf muṭraḍ. The last-named book survives a chapter of the Nihāyat al-trāb fi ʿAlhār al-Furs waʿl-Arab (Browne in JRAS, 1900, 216-7; Rosen in Zap. Vost. Od. Imp. Rus. Arkh. Obcheshka, 1901-2, 77-118). The first two are amalgamated in the Kitāb Bilawhar wa-Būdhasaf published at Bombay in 1306/1888-9 (Russian trans. by Rosen, ed. by Krakovskyy: Povest’ o Varaama pustnikhe i Yosaf tearetic indyyshm, Moscov, 1947). This Bombay edition is the fullest version extant: episodes introduced from the Kitāb al-Budd having been distinguished from the remainder, the original Bilawhar and Būdhasaf (Yūdasaf) story may be largely reconstituted, reference being made to the Halle abstract (edit. by Hommel in Verh. des VII. Int. Orient.-Cong., Semit. Sect., Vienna 1888, 113-65; trans. Rehatsek, JRAS, 1890, 119-55), the adaptation incorporated in the Shiʿī Kitāb thulal al-dīn waʿl-nīmaʿ by Ibn Bābhūya (g.v.), the longer Georgian Christianised version discovered in Jerusalem (Greek Patriarchal Library, Ms. Georgian 140: edit. Abuladze, Balavarianis k’art’uli redak’tebi, Tiflis, 1957), as well as to the early 13th century Hebrew paraphrase by Abraham b. Ḥasdai or Chisdai (see Steinschneider, Die hebr. Übersetzungen des Mittelalters, 863-7). The lengthy fragment of the Kitāb Bilawhar wa-Yūdasaf in the Taymuriyya collection, ʿAlḥālā section (Brockelmann, I, 158) has been identified by Stern as belonging to the same redaction as the Halle abstract; it supplies some of the text missing in the defective unique Ms. of this recension (notes supplied by S. M. Stern). The metrical version stated in the Fihrist (119) to have been composed by Abān al-Lāḥiqi (g.v.) has perished.

Note that in the Ms., the name of Yūdasaf is written in many different ways; the original Būdhasaf or Būdāsaf has been corrupted by addition of a diacritical point into Yūḍāsaf (whence Yūḍasaf) or Yūḍasaf, and thence Georgian Iodosaf, from which comes Greek Ioosaph, then Latin Josaphas.

Diffusion of the story. With its companion works, the Kāila wa-Dīmna and the romance of Sindbād, the book of Bilawhar and Yūdasaf was widely diffused in early Arabic literature. Note for instance the allusion in the Rasā’l Iḥyāʾīn al-Safāʾ (Cairo ed., iv, 120, 223) to Bilawhar’s fable of the King, the just Wazir and the Happy Poor Couple, in connexion with belief in immortality.

The Western Barlaam and Ioasaph (Josaphat) legend derives from the Kitāb Bilawhar wa-Yūdasaf via the longer Georgian (Jerusalem) redaction, wherein the heroes’ names appear as Balawbar and...

Iodasap'; the Georgian was adapted and rendered
into Greek by St. Euthymius the Athonite and his
school about A.D. 1000. The mediaeval attribution
of the Greek Barlaam to St. John Damascene,
revised by F. Dölger (Der griechische Barlaam-Roman,
enm Werk des H. Johannes von Damaskos, Ettal
1953), fails to take account of the textual evidence
and is to be discounted.

Also to be rejected is the Ahmadī doctrine which
identifies with Jesus Christ the holy Yūz Asaf
whose shrine is venerated at Srinagar in Kashmir.
Many of the legends concerning the Yūz Asaf of the
Ahmadīs are simply extracts borrowed from the
Kitāb Bilawhar wa-Yuddsaf, with “Kashmir” sub-
stituted for “Kusinara”, the traditional place where
the Buddha died.

BILBĀS, a confederation consisting, according to
C. J. Edmonds (220-222), of five tribes: Mangūr,
Māmūgh (I have rather heard it pronounced Māmāgh),
Prān, Sinn and Rāmk. The Mangūr of the mountains
are an important tribe who live in Persia on both
sides of the Lāwēn (the upper reaches of the Little
Zāb in Persia). The Mangūr of the plain live in
Irāk where they consist of two branches: Mangūr
Zūdī and Māngūr-a-Rūtā (the naked Mangūr). The Prān
have also one mountain branch in Persia to the north
of the Mangūr, west of the Lāwēn, and another in
Irāk. The Sinn and the Rāmk who had formerly
distinguished themselves in the cavalry of Nādir
Shāh (ibid., 145), were afterwards expelled from
Shāhriüzūr (ibid., 142-143) by Salīm Bābān (1743-
1757) and, fallen from their ancient glory, now
occupy five poor villages in Bitwēn near the Zāb. The
Rāmk are subdivided into Kečāl-u-Khiw Spīy
(bald and white hats) and Fakē Wāysi. Sometimes
classed among the Bilbās are the Udjàk who live in

Encyclopaedia of Islam

77
Irak above the Mangur Zudi, in 8 villages on the frontier. Minorsky counts the Odjak Kaššāf among the Bilbas but does not include the Sinn and the Rāmk. See M. A. Zakī (Khalij an-Naṣrīy, 391, 497, 447), on the subdivisions of the Bilbas tribes. In Wagner (ii, 116, 228) who had formerly (1852) visited the Bilbas, but who refers chiefly to Niebuhr (1766), Rich (1836-7) and Ker Porter (1822), some fuller information is to be found. He points out that when there is discussion on the affairs of the tribe, all its members enjoy equal rights of vote and veto. The blood-money if a man is killed, is 22 oxen. Adultery is punished by death. The girls are never allowed to marry men of another tribe, but the effects of inbreeding are diminished by the regular practice of abduction. C. J. Edmonds draws attention to the romantic character of the Bilbas girls but emphasises the real risk of abduction. C. J. Edmonds writes of the Sayyids of Bilgram, who outpaced their . . .

BILBAYS, a town in Egypt which, because of its site, was of considerable importance in the middle ages. Its name comes from the Coptic Phelbes and Arab authors, doubtful of its pronunciation, called it Bulbays or Bilbays as well. Situated on the natural invasion route, it was always the town's fate to be besieged by the armies which came to conquer Egypt. First, in the year 19/640, it was by the Arabs who were halted here for a month; at the time of the Crusades it was by Armenian crusaders, and armies often camped there; al-Ḥakim called it the 'gate of Syria'. It was, in fact, in the course of a formidable mobilisation against the Byzantines that the Fatimid Caliph, al-Aziz, fell ill and died there, and his son, al-Ḥakim, was invested with the Caliphate in the same place.

Bilbays used to be on the route of the mail couriers and to have a centre for carrier pigeons. Up to modern times it was the capital of the Sharqiyya province, but was supplanted in the 19th century by Zakākīzīk.

In the year 109/727 the financial administrator of Egypt installed part of the tribe of Kays in the region of Bilbays. These, about 3,000 in number, helped commercial traffic as camel-drivers and formed a troop which could be mobilised. The choice had fallen on Bilbays because the town was sparsely populated; the existing inhabitants were not harmed, and the tax receipts were not likely to decrease.

(G. Wiet)

BILEDJIK (the mazlum of Byzantine times) is a small town in north-western Asia Minor on the Kara Șū, an affluent of the Saṅkāyā. It is thought that the site of the ancient Agrilion (Agrillum, in the Feuinger Tables) lies not far from Biledjik. The Ottomans seized Biledjik from the Byzantines in the reign of Selim I (1475-1520), and during the reign of Bayārā (1520-1524) the town was occupied by Greek forces in 1521 and was not recovered finally by the Turks until the autumn of the next year. The population of Biledjik amounted, in 1950, to a little less than 4,900 inhabitants.

BILGRAM, a very ancient town in the district of Hardōī (India), situated in 27° 10' N. and 80° 2' E., with a population (1951) of 9,565. It has produced a remarkable number of great men. Abu Ṭạfḍīl speaks of the inhabitants as being for the most part intelligent and connoisseurs of music.

In early times it was peopled by copper-smiths (as recent discoveries have established), who were turned out by invading Ṭājputs from nearby Kannawādi. During the Mughal rule also Bilgram was a pargana in the sarkar of Kannawādi (Aṭṭān-i Akbari, tr. Blochmann, i, 434).

The town was conquered by Kālid Muhammad Yūsuf al-ʿUṯmānī al-Madani al-Kāzarīnī in 409/1018 for Sultān Mahmūd of Ghazna during his Indian campaigns. During the anarchy that followed the enfeoffment of Ghaznavid rule in India, it appears that the local Hindus drove out the Muslim ruler of Bilgram and reoccupied the town. However, during the reign of Sultān Shams al-Dīn Iltuḵī (q.v.), Sayyid Muhammad Šaghārī, a lineal descendant of Sayyid Abu Ṭạfḍīl, attacked Bilgram in 614/1217 at the head of a strong contingent of Imperial troops, and defeated Ṭāj-pūta Sīr, after whom the town had come to be known as Ṣrnagār, and the Muslims recaptured the town.

In 948/1541 a fierce engagement took place here between the forces of Humāyūn and Shīr Shāh Sūr, resulting in the complete rout of the former. In 1593 Akbar issued a jarmān prohibiting the public sale of wine and other intoxicants there.

The Sayyids of Bilgram, who outpaced their
rivals, the 'Utmaani and Farshawri 'Askari in almost all walks of life, attained fame in history as writers, scholars, poets and administrators. Prominent among them were: 'Abd al-Wahid Bilgrami, author of Sab Sanadil, 'Abd al-Dalili Bilgrami [see BILGRAMI]; his son Muhammad, whose tahkalilus was "Sha"ir"; Ghulam 'Ali 'Azad [q.v.]; Amir Haydar, a grandson of 'Azad Bilgrami and author of Sawanihi AKBari; Sayyid 'Ali Bilgrami and his elder brother 'Imad al-Mulk Sayyid Husayn Bilgrami, who was the first Indian Muslim to be nominated (1909) a member of the Council of the Secretary of State for India. Sayyid Murtadah al-Zabdi, author of Tadi al-'Arus, was also a native of Bilgram. Awaangiz is reported to have likened the Sayyids of Bilgram to the wood used in the Masjd al-Harum, which could neither be sold nor used as fuel.

Although the tahkalilus of Bilgram did not produce many men of distinction (except Ruh al-Amin), it invariably remained with them. It was mainly to vindicate this claim that Ghulam Husayn Farshawri who devotes lengthy chapters to him in his other of his tribe works their respective works (see BIBL.).

(AS. BAZMEE ANSARI)

BILGRAMI, (i) 'Abd al-Dalili B. Sayydi Ahmad al-Husayni al-Wasti was born on 13 Shawwal 1071/10 Nov. 1660 at Bilgram. He received his education first at his home-town from Sa'd Allah Bilgrami and later at Agra from Fad-adil Khan, one of the secretaries of Awaangiz. When Shah Husayn Khan was appointed disan of the sarkar of Lucknow he accompanied him there and remained with him for 5 years. It was here that he attended the lectures of Ghulam Naksband Lakhnavi (d. 1212/1741). He attained a high degree of proficiency in various branches of learning especially Arabic philology and literature.

He visited Deccan twice, first in 1104/1692 and later in 1111/1699 when he was appointed bahkki and wakil-nilgir of Gujrat (Sha'w Dawila). He held this job till his removal in 1116/1704. The same year he was, however, reinstated but transferred to Bhakkar [q.v.] with headquarters at Siwistan (modern Swhwan). In 1126/1714 he was dismissed, having made a curious entry in the official journal. It related to the raining of sugar-globules in the pargana of Djaot. He returned to Delhi where he attached himself to Sayyid Husayn 'Ali Khan Bahrab. He died at Delhi in 1138/1725 but his dead body was carried to Bilgram for burial.

He was the maternal grandfather of 'Azad Bilgrami [q.v.] who devoted lengthy chapters to him in his various works. A poet, primarily in Arabic and Persian, he also composed verses in Turkish and Hindi.

(A. S. BAZMEE ANSARI)

(ii) Sayyid 'Ali B. Sayyid Zayn al-Din Husayn was born in 1268/1851 at Patna. In 1291/1874 he graduated from Patna College with distinction in Sanskrit. In 1292/1875 he successfully competed for the Native (later Indian) Civil Service standing first in the whole of Bihar. Soon after he joined the London University for higher studies in geology, cartography, mineralogy and biology. On completion of his education he extensively toured the Continent. A polyglot, Sayyid 'Ali was well-versed in Latin, German, French, Arabic, Persian, Sanskrit, Bengali, Marathi, Telugu, Gujurati, English and his mother-tongue Urdu. For a number of years he was examiner in Sanskrit in the Madras University. In 1311/1893 he was awarded the title of Shams al-'Ulama' by the Government of India. In 1320/1902 he joined Cambridge University as Reader in Marathi. The same year he was commissioned to prepare a hand-list of the Arabic and Persian MSS, known as the Delhi collection, in the India Office Library. For several years he held various high offices in the former Haydarabad State. In 1909 Calcutta University conferred on him the degree of L.L.D. honoris causa. His fame chiefly rests on his Urdu translations of French and English works, notably: (i) Tamaddun-i 'Arab, a translation of Gustave Le Bon's work La civilisation des arabses (Agga, 1316/1898); (ii) Tamaddun-i Hind (Agga 1913), a translation of another work of Le Bon: La civilisation de l'Inde. He is also the author of Risala dar tahkik bidad Kallla wa-Dimma in which he critically examines the sources, editions, characteristics etc. of the original Sanskrit work. It was through his efforts that the Haydarabad codex of the Baddur-nama was published. He died suddenly at Hardoi in 1329/ May 2, 1911.

(A. S. BAZMEE ANSARI)

BILKIS is the name by which the Queen of Sheba is known in Arabic literature. The story of the Queen's visit to King Solomon (based on 1 Kings X, 10-13) has undergone extensive Arabic, Ethiopian, and Jewish elaborations and has become the
subject of one of the most wide-spread and fertile cycles of legends in the Orient.

The name Bilkis does not appear in the Kur'an but is current with Muslim commentators. Sûra XXVII, 15-45 reflects some of the principal elements of the Sheba legend and describes the sun-worship of the Queen, how a hoopoe (huhudh) carries a letter to her from Solomon, the Queen's consultation with her nobles, and the despach of presents to Solomon. When these are not well received by the King, the Queen of Sheba comes herself and, by a ruse (mistaking the polished floor for a pool of water), is made to uncover her legs. Eventually, she surrenders (together with Solomon) to Allâh, i.e. she becomes a Muslim.

Muslim commentators (Tabarî, Zamakhsharî, Baydâwî) supplement the story at various points: the Queen's name is given as Bilqis; the demons at Solomon's Court, afraid that the King may marry Bilqis, spread the rumour that the Queen has hairy legs and the foot of an ass. Hence Solomon's ruse of constructing a glass floor which the Queen mistakes for water thus causing her to lift her skirts. Solomon then commands his demons to prepare a special depilatory to remove the disfiguring hair. According to some he then married the Queen, while other traditions assert that he gave her in marriage to one of the Twabba's of the tribe of Hamdân.

In Jewish sources the combined narrative of Kur'an and Muslim commentators can first be traced in the 5th (?) century Targum Sheni to Esther where we find a most elaborate version of this story. This is further embellished in the 11th (?) century Alphabet of Ben Sira which avers that Nebuchadnezzar was the fruit of the union between Solomon and the Queen of Sheba. The fullest and most significant version of the legend appears in the Kebra Nagast ('Glory of the Kings'), the Ethiopian national saga. Here Menelik I is the child of Solomon and Makeda (the Ethiopic name of Bilqis) from whom the Ethiopian dynasty claims descent to the present day. While the Abyssinian story offers much greater detail, it omits any mention of the Queen's hairy legs or any other element that might reflect on her unfavourably.

Although the Kur'an and its commentators have preserved the earliest literary reflection of the complete Bilkis legend, there is little doubt that the narrative is derived from a Jewish Midrash. This judgement is based not only on intrinsic probability and our knowledge of the general influence of the Midrashic genre on early Islam, but is also supported by: (a) the curiously abrupt version of the story in the Kur'an which clearly presupposes prior development; (b) Talmudic misinterpretation (Baba Balâra 15b) that it was not a woman but a kingdom of Sheba (based on varying interpretations of Hebrew mikts) that came to Jerusalem (obviously intended to discredit existing stories about the relations between Solomon and the Queen); (c) the Ethiopic loanword sarâb in Sûra xxvii, 44 (cf. Nûldeke, NB, 51); (d) the probable derivation of Bilkis from Âlûlûs or the Hebraised Pîlbikûs 'concubine'.

In Persian art Bilqis may often be seen standing in water before Solomon. The same scene is depicted on a window in King's College Chapel, Cambridge.

terminus ante quem for the dating of the rock crystal object, the earliest of such termini falling within the years 973 and 982 A.D. Not a single one out of these 165 odd specimens—which include many chess pieces and other minor objects—bears a date, but two of them have inscriptions containing the name of a ruler, in both cases a Fatimid Caliph: a ewer in the Treasure of St. Mark’s in Venice made for al-‘Aziz (935/975-386/996), and a crescent-shaped object in Nuremberg, perhaps the head-gear of a harness, made for his grandson al-Zahir (441/1022-447/1036). A ewer in Florence must have been made for al-Husayn b. Diwbar between 390/1000 and 401/1011, during the reign of al-Hakim.

All these works in rock crystal are often spoken of as “Fatimid”, but quite a number of them must be of pre-Fatimid origin, and some of them may have been made at al-Baṣra.

The entire number of specimens referred to belong to the category described as manbaḥ; on the other hand we hardly possess any example of madrād work, unless we accept as such some of the faceted ewers that some scholars regard as Fatimid, while others think they were made in Europe (Burgundy, Bohemia, Sicily, or Spain).

**Billiton,** corrupted form of Belitung, island in Indonesia at about 108° eastern long. and 3° southern lat., a little larger than 1800 square miles. It owes its fame to its tin-mines, and it is probably for this reason that it is mentioned in Indonesian documents of about 900 A.D. A part of the indigenous population—less than 100,000 souls—was converted into Islam at the beginning of the 19th century. The population, numbering about 1500, consists of a settled negro race, the Kanuri, and the Guezebida, hybrids from Kanuri and Teda. These settlers have always been subject to the nomads who inhabit the neighbouring regions, first to the Touareg of the Air, then to the Teda. They cultivate palm-trees whose dates are sent to the Tibesti and to the Hausa countries; but their chief means of livelihood lies in the exploitation of the salt-works situated at 2 kilometres to the north-west of Billiton, at Kalala.

**Billit ton,** the title of a Turkish folk tale which gave its name to the oldest Turkish collection of such tales. Billur Koshk, the title story Billur Köşk (in the edition by I. Kūnos, cf. Türkische Volksmärchen, V, note 2, there is a further tale, Kehriš ule Yenemligi) and the farce Hırsu ule Yankesis ("The thief and the pick-pocket"). All of these have an oral tradition, and have only recently been somewhat modernised and brought out in book form. They have, however, lost nothing of their popular flavour in spite of their literary style. Numerous editions of this collection of folk tales have circulated in Turkey during the past hundred years, and since the writing reform in 1928, there have also been some in Latin script.

**Editions:** Billur Köşk Hikayesi, ed. Eminyet Kütübhâhenesi, Istanbul 1339; Billur Kösh Hikayesi, Istanbul 1928; Selâmî Müniy Yurdatap, Resimli Billur Köş Köşk Hikayesi, Istanbul 1940.

**Translations:** T. Menzel, Türkische Märchen I: Billur Köşk, 14 Turkish tales, translated into German for the first time, from the two Istanbul editions of the collection. (Beiträge zur Märchenkunde des Morgenlandes, edited by G. Jacob and T. Menzel, iii) Hannover 1923.

**Billima,** (Ar.) (in Tedaga: Togei or Taigeli), chief centre of the Kawar, a group of oases situated mid-way between Fezzan and Chad, on the main route from the Mediterranean to the Sudan. The palm groves extend for 90 kilometres from north to south, from Anay to Billima. At no point are they more than 2 kilometres wide. Billima is situated at the foot of a cliff which faces west; its base is formed by the marine layers of Upper Cretaceous, and its summit by the sandstone of the Continental terminal.

Although conquered by the Arabs in the 1st/11th century (expedition of Ḥāfa b. Nāfī reported by Ibn ʿAbd al-Ḥakam), the Kawar was still partly pagan at the beginning of the 19th century. The population, numbering about 1500, consists of a settled negro race, the Kanuri, and the Guezebida, hybrids from Kanuri and Teda. These settlers have always been subject to the nomads who inhabit the neighbouring regions, first to the Touareg of the Air, then to the Teda. They cultivate palm-trees whose dates are sent to the Tibesti and to the Hausa countries; but their chief means of livelihood lies in the exploitation of the salt-works situated at 2 kilometres to the north-west of Billima, at Kalala.

These salt works are made up of about a thousand pits spread over about 15 hectares. The salt is mainly extracted in the hot season, from April to November, because of evaporation.

The pits are dug down to the underground water level (2 m.), the water is left to evaporate, a crust is formed which is broken with palm sticks, and the salt is deposited at the bottom. There are two main types of salt: 185, in the form of crystals which is...
not treated in any way and is used for human consumption, and the kantu, moulded into loaves in hollowed-out palm-trunks and used chiefly for the feeding of animals. The salt-works belonged first to the Koyom, a Kanuri tribe, who were driven back to the south-east of Kawar, between Kouka and Gouré; then, from the sixteenth century, to a Touareg tribe, the Kel Gress. Since the arrival of the French, they have belonged to the people of Bilma. The apply for authority to dig to the village chief who is master of the land, and exploit the works themselves, without paying royalties to anyone. All commercial activity is carried on during the autumn and spring, when the Touareg caravans bring in the millet, butter, dried meat, fabrics and cola nuts which are bartered for the salt. These great caravans comprising several thousand camels, with growing security have been replaced by smaller individual caravans, which are tending to get smaller still, following the infiltration into Nigeria of sea-water salt and European salt, but the family bartering system remains unchanged; only the rate of exchange varies from year to year.

BILMEDDE, the name given as a rule to popular riddles among the Ottoman Turks. Northern and eastern Turks use instead various words from the root tap- (‘to find’), such as tablkam, tapmadj, tapfrlsh, tabishkak, tabushturmak.

The true riddles of the people can generally be distinguished from artificial riddles such as the lughas or mu'ammd by their obviously simple form, their puns or double meanings, and their appearance of unreason or illogicality. This last characteristic of riddles, their irrationality, is manifested in this way: when speaking of various objects and happenings, certain traditional expressions are employed which have only a vague connexion with the ordinary natural way of looking at things, and which must be known before the meaning can be grasped. That is to say, it is not generally possible to find the solution to a riddle by using one's logical judgement. To solve a riddle, one must first comprehend the sense of the peculiar terminology, which has something of the quality of a hieroglyph. None of these features is peculiar to popular Turkish riddles. The riddles of any given people differ from those of any other only in details, usually of form. The specially Turkish character of the bilmedde is primarily bound up with geographical location and Turkish popular life. Broadly speaking, the Islamic stamp is secondary and unimportant.

At the present time, riddles chiefly constitute the branch of Turkish popular literature that is peculiar to children. Nevertheless, we have evidence suggesting that once upon a time they were regarded very seriously and formed a part of popular philosophy: we find stories in which riddling contests occur, with one man quoting a hemistich and his opponent capping it with another, sometimes with serious consequences for the defeated party. So too the existence of riddles relating to cosmology and sex shows clearly that these were not originally invented for children. With the change in their social role, riddles underwent considerable modification and took on new meanings. Indeed the solution of riddles is usually a shifting and fluid element in them.

Riddles are mostly in the form of a short proposition: consider for example this riddle, known to have existed as early as the 14th century and still widespread today: yer altinda yagilfl kast7k ('oily sliding underground') = 'snake'. Most of the popular riddles consist of two parts which are assonant or half-rhyming because of the syntactical balance between them: Allah yapar yapismi—bliak alar kaptiini ('God builds its structure, the knife opens its door') = 'water-melon'. Riddles of this pattern are often extended into regular quatrains (maw', a characteristic form of Turkish popular verse. Paronomasia and onomatopoeia abound.

A comparative examination of material so far collected shows that the various groups into which riddles may be classified are all variants of certain primitive types. In fact, because of the alterations incidental to the process of being passed orally from one person to another, and because they are consciously adjusted to suit new solutions, riddles are subject to constant change. This entails a wide-nigh infinite increase in the number of variants. Nevertheless there are some riddles which have changed neither their form nor their solution for centuries.

As early as Mahmud Kâshgari's Divan Lughat al-Turk (11th century) we find riddles, under the names tabusghu neng, tabusghuk and tabusgh. But the oldest known examples of Turkish popular riddles are found in the Codex Cumanicus and have formed the subject of numerous publications (G. Kuhn, Codex Cumanicus, Budapest 1880, 143-157, 236 foll.; W. Radloff, Das Turkische Sprachmaterial des C. C. (Mém. de l'Acad. de St. Petersbourg, 1887, xxxv, 2 foll., no. 6); W. Bang, Über die Rätsel des C. C. (SBPr. Ak. W., 1912, xxxi, 334-353); J. Németh, Die Rätsel des C. C. (ZDMG, 1913, lxvii, 577-608); S. E. Malov, K istorii i kritike C. C. (Izv. Akad. Nauk SSSR, literary section, 1930, 348-375); J. Németh, Zu den Rätseln des C. C. (KCA, ii, 366 foll.).

There are also a good many collections of riddles recorded by contemporary scholars, but these are far from having exhausted the rich store existing among the Turkish peoples.

Bibliography: A. N. Samoylovitch, Zagadki sâhaspiyitskh Turkmencov (Zivaya Starina, 1909), 28-32. He has published a bibliography of studies of riddles of the Turkish peoples till 1932. This (RO, iv, 4 f.; till 1926) has been completed by Malov. For bibliography of Ottoman riddles see Kowalski's article Türkische Volksrätsel aus Nordbulgarien (Festschrift für G. Jacob, 1930 f. (till 1932). Important collections of Turkish riddles: I. Küno, Osmanlıdâlp nêphêlîcê zuytêmeny, Budapest 1889, ii, 147-177; T. Kowalski, Zagadki ludowe twerce, Krakow 1919; Sa'd al-Din Nuzhet and Ahmed Ferid, Konya wîlayeti khalîkiyât we harîhiyât, Konya 1926, 225-233; Hamamâ-zade Ihsan, Bilmedeler (articles on Turkish folklore), iii, Istanbul 1930; T. Kowalski, Türkische Volksrätsel aus Kleinasien, (ARO 1932, iv, 295-334).

BIMARÎSTân, often contracted to birîstân, from Persian bimar ‘sick’ + the suffix -istân denoting place, a hospital. In modern usage bimarîstân is applied especially to a lunatic asylum.
i. Early period and Muslim East.

According to the Arabs themselves (cf. Makrizi, Khitat, ii, 405), the first hospital was founded either by Mansurids, a mythical king of Egypt, or by Hippocrates, the latter of whom is said to have made for the sick in a garden near his house a *xenodokeion*, literally 'lodging for strangers'. The authority for this statement is given by Ibn Abi Uwaysiya ('Uyûn, ed. Müller, i, 26-27) as Book 3 of Galen's *Fi ahâdîk al-mafs* (Peri Ethôn), a work which has not survived in Greek. Since hospitals were not a feature of life in classical antiquity, the question of origin is not solved by these indications.

Al-Wald I (Caliph 86-96/705-715) is credited with having been the first to build a *maristân* in Islam, placing in it doctors and assigning them stipends (Makrizi, loc. cit.), but although this is stated in similar terms ('hospitals for the sick') by so early a writer as Ibn al-Fakhri circa 289-902 (106-107), the fact is open to doubt. According to al-Tabari (ii, 1196), Al-Wald restrained the lepers from going out among the people and assigned them stipends, — a bare statement somewhat amplified in another passage (ii, 1271), where al-Tabari mentions that Al-Wald 'gave donations to the lepers, telling them not to beg from the people and assigned to every cripple a servant and to every blind person a guide'. Ibn al-Ahîr (sub anno 88/702) has a short notice to the same effect, and al-Dhahabi adds that the servants and guides were slaves (Ta'rikh al-Islâm, iv, 67). It would seem that we have to do here with measures of segregation, somewhat as in Muslim Spain later, where a whole quarter at Kûrtuba (Cordova) was known as *Râbaâd al-Mârad, 'Suburb of the Sick' (cf. E. Lévi-Provençal, Hist. Esp. mus., iii, 381-382, 434).

The establishment of the first real hospital in Islam depended on the continuing influence of the medical school and hospital at Dûndasbûr (Djundishapur) in Khûrâstân. Founded under the Sâsânids, this institution maintained its Syro-Persian and Indian, ultimately Greek, traditions, into the Arab period and from the time of the transference of the capital to al- lrâk exercised a profound effect on the development of Arabic medicine. As far as hospitals are concerned, contact with Dûndasbûr bore fruit in the reign of Hârûn al-Râshîd (170/786-193/809), who charged Djûbîrî b. Bahlîlî, a Christian doctor of that school, with the creation of a *bîmaristân* in Baghdad. At the same time a skilled dispenser in the *bîmaristân* at Dûndasbûr was sent to Baghdad. This man's son, Yûhânnâ (Yahyâ) b. Mâsâwây, afterwards became head of the new *bîmaristân* (Ibn al-Kîfî, Ta'rikh al-Hukmândî, ed. Lippert, 383-384; Ibn Abi Usâybi'â, i, 174-175). The original Baghdad hospital was situated in the S.W. suburb on the Kârkhây Canal. It was there that, following the catholic traditions of Dûndasbûr, the Indian Manka at the request of Yahyâ b. Khâlid al-Barmaûlî translated the Sanskrit medical work *Subrusa-saṁhitâa* into Persian (Fihrîst, 303) and al-Râzî (Rhazes) lectured, according to some

How long the *bîmaristân* of Hârûn continued to function alone is not clear. From the beginning of the 4th/10th century or somewhat earlier we hear of a spate of new foundations in Baghdad: the *bîmaristân* founded by Badr al-Mu'tâdîdî, the *khulûm*, 'page', of al-Mu'tâdiidî (278/892-289/902) in the Mûharrmin quarter on the E. bank of the Tigris (Ibn Abi Usâybi'â, i, 222, cf. 214); a *bîmaristân* in the Harbiyya quarter, N. of the City of al-Manfûr, endowed in 302/914 by the 'good wazîr' 'Ali b. 'Isâ, who gave the direction of it together with 'the rest of the hospitals in Baghdad, Ma'mûr and al-Mârad, to the learned Abû 'Uthmân Sa'id b. Yâ'sûbî al-Dimîshkî, otherwise known as a translator (Ibn Abi Usâybi'â, i, 234); the *bîmaristân* al-Sayyida on the E. bank, opened in al-Mubarram, 306/June, 918 by Sinân b. Thâbit, who appears to have succeeded Abû 'Uthmân al-Dimîshkî as general interendant of hospitals in Baghdad and elsewhere (Ibn Abi Usâybi'â, i, 221-222); the *bîmaristân* al-Mu'âtirîdî at the Bâb al-Sâmî, built about the same time (Ibn Abi Usâybi'â, i, 222); and the *bîmaristân* of Ibn al-Furât in Darb al-Mu'âaddir, over which Thâbit b. Sinân is said to have been given the charge in 313/925 (Ibn Abi Usâybi'â, i, 224). These hospitals derived their revenues from endowments (waqf) made by powerful and wealthy individuals. The funds were in the hands of trustees, who were not always very attentive to their responsibilities (Ibn Abi Usâybi'â, i, 221). An idea of the size of the hospitals may be gained from their monthly expenditure: at *a* Mûktadîrî 200 dinârs a month; at the *bîmaristân* al-Sayyida, 600 dinârs a month (ibid.). Some comfort for the patients was secured by the provision of blankets and charcoal in cold weather (Ibn Abi Usâybi'â, i, 222). Efforts in this direction sometimes went much farther (see below).

We know less about hospitals in the provinces, but some certainly existed before the 4th/10th century. The *bîmaristân* of al-Rayy, over which al-Râzî presided before coming to Baghdad, where he died as head of a hospital about 320/932 (Ibn al-Kîfî, 272), was a large institution (cf. Ibn al-Kîfî, 273; Ibn Abi Usâybi'â, i, 310-311) and had probably been in existence for some time. A lunatic asylum at Dayr Hîtkîl between Wâsît and Bagdad was visited by al-Mubarrad in the Caliphate of al-Mutawakkil, i.e., between 232/847 and 247/861 (Masûîdî, Murûdî, vi, 197 ff.).

In the time of Sinân b. Thâbit, who died in 332/942 (Fihrîst, 302), on instructions from 'Ali b. 'Isâ already mentioned the prisons were daily visited by doctors, medicines and potions were provided for sick prisoners, and female visitors were also admitted, evidently in the capacity of nurses (Ibn Abi Usâybi'â, i, 221). At the same period hospitals and a travelling dispensary (khusûnna la ilâdâiyâ wa-l-âqîbara) were sent round the villages of the Sawâd (i.e., lower al-Irâk). From correspondence between Sinân and the wazîr concerning this mobile medical unit it appears that at this time non-Muslims as well as Muslims were treated at the *bîmaristân* (Ibn Abi Usâybi'â, ibid.).

At least some of the Baghdad hospitals which have been listed were probably still in existence when the great 4Aâdûl *bîmaristân* was founded at the bend of the Tigris in W. Baghdad by the Buwayhid 4Aâdûl al-Dawla. Al-Râzî is repeatedly mentioned in connexion with this hospital, which from the time of its opening in 372/982, shortly before the death of 4Aâdûl al-Dawla (Dhahabi, Danîl al-Islâm, i, 657), was the most celebrated of the hospitals of Baghdad. It is said that al-Râzî chose the site by causing a piece of meat to be suspended in every part of the city, and discovering where there was least putrefaction, and also that 4Aâdûl al-Dawla selected him from more than a hundred doctors as first chief (the word is sâ'îr, from Syriac) of the new foundation (Ibn Abi Usâybi'â, i, 309-310). But al-Râzî had died 50 years earlier. The explanation of the anachronism,
already noted by Ibn Abi Uṣaybi'a (ibid.), may be the similarity in the script of the Bimaristan al-
Abūdī and that found in al-Rāzi's lifetime by al-
Aṭāddīl (see above). When first founded, the ʿAbūdī hospital had twenty-four doctors (Ibn al-
Kūfī, 235-236). Several classes of specialists are mentioned: 'physiologists' (tabāṣīyyūn), oculists (ḥabbālūn), surgeons (dharrā-
ṣīhyyūn) and bonesetters (muḍājābātūn) (Ibn Abi Uṣaybi'a, i, 310). The salary of Ḏījbrā'īl b. ʿUbayd Allāh, whose turn of duty at the bimaristan was two days and two nights every month, is given as 120 dinars, i.e., monthly (Ibn al-Kūfī, 148). Lectures were given at the ʿAbūdī hospital (Ibn Abi Uṣaybi'a, i, 239, 244), and we know of some of the works which were read in this way, e.g., the Aḥrābādīn (Anti-
dotarium) of Sābūr b. Sahīl of Dūjdaysābūr (Fihrīst, 297, cf. Brockelmann, i, 232), eventually superseded by another work of the same title by Ibn al-Tīmīlihā, a later dean (sa'īr, see above) of the ʿAbūdī hospital (Ibn Abi Uṣaybi'a, i, 161, 239). When Ibn Ḏiubayr visited Baghdād in 580/1184 the place was like a great castle, with a water-supply from the Tigrīs, and all the appurtenances of royal palaces (Riḥšā, ed. De Goeje, 225-226).

Another of the great hospitals of mediaeval Islam was founded in Damascus by Nūr al-Dīn b. Zānqī (541/1145-569/1175). The Nūrī hospital is said to have been built from the ransom of an unnamed king of the Franks (Maḵrīzī, ʿAlī, ii, 408). Ibn Ḏiubayr (Riḥšā, 283) describes how the staff kept lists of the patients' names and the amounts of medicines and food which each required. A typical day in the life of a leading doctor at the Nūrī hospital included going the rounds of the sick and writing down prescriptions of medicine and treatment, visiting private patients, then returning to the hospital in the evening to lecture for three hours on medical subjects (Ibn Abi Uṣaybi'a, ii, 155). There was also a Nūrī hospital at Halāb (Aleppo) (Rāghbī al-Tabbākh, Taʾrīḥ Haḥāl, ii, 77).

In Egypt no bimaristan existed till Ahmad b. Ẓūlūm constructed one in 259/872-261/874 (Maḵrīzī, ʿAlī, ii, 405). Here the rule was that no soldier or slave should be admitted for treatment. The institution was richly endowed, with facilities for men and women. The Nāṣirī hospital was founded by Salāh al-Dīn, but the great creation of al-Maṣūrī Ḫalālūn, completed in 11 months in 683/1284, was the most splendid of its kind in Egypt, and perhaps the most elaborate which had yet been seen in Islam. The endowment is said to have amounted to nearly one million dirhams, i.e., 283,000 lira (cf. Ibn al-Kūfī, 235-236). Formerly a Fatimid palace with accommodation for 8,000 persons, the Maṣūrī hospital possessed wards where fevers, ophthalmia, surgical cases, dysentery, etc., were separately treated, a pharmacy, a dispensary, store-rooms, attendants of both sexes, a large administrative staff, lecture arrangements, a chapel, a library, in fact all that the best experience of the time could suggest for the healing of the sick. The account of these matters given by al-Maḵrīzī (Maḵrīzī, ʿAlī, ii, 406-408) is an impressive tribute to the hospital science of mediaeval Islam.

Books were written about hospitals, e.g., the Kitāb fi ṣīḥāt al-bimarīsānīn of al-Rāzī (Ibn Abi Uṣaybi'a, i, 310), the Bimarīsānīnī par excellence (cf. Ibn al-Kūfī, 72). On the other hand, Ibn Ḏiubayr, ed. Fel.'du Sāyīd, 77, which, like the Kitāb al-bimarīsānīn of Ẓāhid al-Ulāmī, al-Fārīḵī, head of a flourishing hospital in Mesopotamia in the 5th/6th century (Ibn Abi Uṣaybi'a, i, 253), is now lost. Somewhat different are the Maḥbūba al-miṣriyya fi l-ʿdāwiya al-bimarīsānīn (also known as Ibn al-Tīmīlīhā, and the Description de l'Afrique, ed. Defremery and Sanguinetti, iv, 157). The endowment is said to have amounted to nearly one million dirhams, i.e., one million lira (cf. Leo Africanus, 154; trans. Beaumier, 306). The famous Almohad hospital at Marrakūṣh by the Almohad sultan Yaḥṣūb al-Manṣūr (380-95/1184-99) about a hundred years before the establishment of the famous hospital at Cairo. The sultan was a great builder and, after attracting to his court the most celebrated Spanish doctors of his time: Ibn Ṭūfāyīn, Ibn Rūshd, Ibn Iza b. Ḥaḥīd, and his son, he built in his capital, for sick foreigners both rich and poor, a magnificent hospital of which there is a description by ʿAbd al-Wāḥīd al-Marrākūṣhī (cf. al-Muṣṭaqīm, ed. Mohammed El-Fassi, 1938, 176-177). The same sultan also founded, in various parts of the empire, hospitals for the insane, for lepers and for the blind (cf. al-Kūfī, ii, 154; trans. Beaumier, 506).

The great Marīnī Sultans [q.v.], Abū Ṭūṣuf Yaḥṣūb, Abū ʿl-Ḥasan and Abū ʿl-Ḥanān, kept up these establishments and added many others (cf. al-Kūfī, ii, 214; al-Đaḥāḥira al-Saniyya, ed. Ben Cheneb, 100; Ibn Marrīk, al-Musnad, ed. Lévi-Provençal, in Hesperis v (1925), 36; Ibn Battūta, Riḥšā, ed. Defremy and Sanguinetti, iv, 347). At a later date, the ruling sultans appropriated the revenues intended for these hospitals, which consequently fell into decline or disappeared.

At the beginning of the 10th/16th century, Leo Africanus described the hospital at Fez as being in total decline and used primarily as a prison for dangerous lunatics. This is still its function, and it is also used as a prison for women (cf. Leo Africanus, Description de l’Afrique, trans. Schefer, ii, 78; trans. Épaludar i, 188; Le Tourneau, Fes, 255-257).

The famous Almohad hospital at Marrākūṣh seems to have disappeared without leaving any traces, and the hospital founded there by the Saʿdīd sultan ʿAbd Allāh al-Ghālib bi-l-Ilāh (965-8/1557-74) became a prison for women (cf. al-Nāṣirī, Kitāb al-Iṣtibād, trans. v, 63).

In 1247/1831-32, the ʿAlawīd sultan Mawlay ʿAbd al-Raḥmān built at Salā a hospital attached to the
sanctuary of Sayyid Ib'n 'Ashîr. This hospital, which is still in use, dispensed with doctors; instead, the sick relied for their cure upon the *burâba* of the same. The memory of old hospitals which have disappeared or fallen into disuse is preserved in some towns of Morocco, for example in Rabat and El-Ksar (cf. L. Brunot, *Textes arabes de Rabat*, ii: Glossary, 753), and also in Tangiers.

Leapers (plural *dâqâhîma*, or, euphemistically, *mardî*) were usually placed in a special quarter, called *al-hâra*, outside the towns. At Fez, they were originally settled outside Bab al-Khawkha, on the Tlemcen road. During the first half of the thirteenth century they were removed to coves outside Bab al-Sharîf. Then, in 658/1260, they were installed in other coves outside Bab al-Gisa. At the beginning of the 10th/16th century they lived in a town near the Sûk al-Khamis (cf. *al-Kirîs*: ed. Rabat 1936, i, 53-54; Leo Africanus, *Description de l'Africque*, trans. Épaulard, i, 229). At Marrâkîs, the *hâra* was originally outside Bab Âghmût, until, at the end of the 10th/16th century, the Sa'dîd sultan al-Manṣûr removed it to outside Bab Dukkâla.

At Tunis, the Hâfîsîd Sultan, Abû Fâris, founded the first hospital "for poor, foreign or infirm Muslims", completed in 823/1420 (cf. al-Zarkaşî, *Ta'rîkh al-Dawlatayn*, ed. Rabat 1929, 102). At Granada, the Naṣîrîd sultan Mu'âmmâd V, built a splendid hospital "for sick and poor Muslims", completed in 768/1367. The foundation inscription reads that "never, since the beginning of Islamic influence in these parts, has such an establishment been founded". Perhaps this is an exaggeration, for there were others, and in Granada itself. And, from the 7th/13th century onwards, the Valencia *Vocabulis*, translated *hospitalia* by dialectal and, therefore, living terms: *marastûn* and *malastûn* (cf. Ibn al-Khaṭîb, al-İhâ'a, ed. Cairo 1319, ii, 29; Lévi-Provençal, *Inscriptions arabes d'Espagne*, 164; L. Seco de Lucena, *Plano de Granada arabe*, 53).

A distinction must be made between "hospitals" intended for the sick and "hospices" or "night lodgings" (mansûl) intended for travellers. In the Muslim West, such hospices were established outside the gates of the big towns by most of the sovereigns who founded hospitals. They received the name *sânâyâ* [q.v.] (cf. G. S. Colin, *La saouâa mérino d'Amnîs, à Taza*, in *Hospîères*, 1953, ii, 1). Al-Khaḍârî appears to have repeated an earlier error in stating that the first *bîmarîstân* was set up by Hippocrates who gave it the name *išâqînudâkhîyan* (*Gîvôbôcêcîv*), "hostelry for foreigners" (cf. Shîkî 'al-Çhâlîl, ed. Cairo 1282, 56) (cf. above i).

The Moroccan author of the *Mu'âjîd* (cf. supra), writing in Baghdâd in 621/1224, is the only Western author to use the correct etymological form: *bîmarîstân*. All the others use a form, *marîstân*, which has lost the Persian preposition. Very soon, the word appears with the first *d* shortened. In the Spanish dialects, the *r* was followed by the vowel *a* (*Vocabulis*: *marastûn* and *malastûn*; E. de Alcalâ: *marastûn*), and this vocalisation is attested for Egypt in the 11th/17th century by Al-Khaḍârî (cf. Shîkî 'ed. Cairo 1282, 206). In present-day Cairo the word is pronounced *murastûn*.

In the modern dialects of the Maghrib, some velarisation has taken place in the word: *morsjîn*, the reason for the sound-change being perhaps affactive. In Tetuan it is pronounced *marjîrân*, and everywhere the meaning of the word is "prison for dangerous lunatics" (cf. W. Marçâs, *Textes arabes de Tanger*, 465). (G. S. Colin)
Sultan, mother of Murad III (982/1003-1574-95). This institution served as a hospital until 1927 when it became a tobacco warehouse. In the 17th century, Ahmed I (1022/1613-17) had a large hospital erected behind the old Byzantine Hippodrome near his famous mosque. The hospital was opened in 1525/1616 and has only recently been demolished to make room for a new school.

There was a recession in the establishment of Ottoman health and social aid institutions during the 18th century; but in the 19th century military service, styles of clothing, education etc. were modernised in the Ottoman Empire. In 1253/1837 the Qurban hospital was established in Istanbul at Edirnekapı in the Madrasa of Mihrimah Sultan. While this hospital was being modernised by Bezmi 'Alem Wâlide Sultan, mother of Sultan 'Abd al-Majid, new modern military hospitals and a medical school were established. These institutions were to meet the medical needs of the new army. A new school of medicine and surgery established in Istanbul in 1243/1827, by Sultan Mahmûd II (1223-1255/1808-39), began its teaching in Italian but switched to French with the coming of some good medical teachers from Austria in 1839. This medical school was enlarged by sultans 'Abd al-Majid, 'Abd al-'Azîz and 'Abd al-Hâmid II, and eventually included a rabies institute, a bacteriological institute and an inoculation centre. A number of physicians having knowledge of European languages and modern medical methods graduated from this school. They went to Anatolia and founded modern hospitals there. Immunisations against rabies and smallpox were started here nearly at the same time as they were begun in Europe. The Ottoman Government was one of those which helped to found the Pasteur Institute.

Shişli children’s hospital, which is one of the largest hospitals in Istanbul, was established by Sultan 'Abd al-Hamîd II, in 1316/1898.

These hospitals were the most important of the Ottoman Empire and although there are many others to be found throughout Turkey, space does not permit their inclusion. In five centuries the Turks established nearly seventy hospitals in Istanbul alone. (BEDI N. ŞEHİTVAHLEDİ)

BİNA, building, the art of the builder or mason. Building techniques depend partly on the materials used. In the Islamic countries we find very widely differing materials employed, from rammed earth to ashlar, with unbaked and baked brick, rubble and rough-hewn stone as intermediary stages. The choice of one of these materials depends on the resources of a given country, or the lack of them, but as well as this on local traditions or traditions brought in by foreign builders, which may for a time supplant local ones. Thus Syria, where the art of stone-cutting had long been known, reproduces in stone the complicated forms of the mukarnas (= stalactites) which were borrowed from Persia and probably derive from brick architecture. And on the other hand Egypt, whose quarries had yielded such fine free-stone, uses brick at the time of the Tulunids, they are taking their models and no doubt their chief architects from 'Irak, where brick was the normal material. Apart from such considerations Muslim builders seem comparatively indifferent as to choice of material, except in some countries such as Syria which cling to their preference for fine work. Of the three great Hispanic-Moorish towers of the 6th/12th century, which—no doubt wrongly—are attributed to the same architect, the Giralda at Seville is built of brick, the Hâsân tower at Rabat of ashlar and the minaret of the Kutubiyya at Marrakesh of rubble. This indifference on the part of the builder as to material and the carelessness of craftsmen in its use are seen more clearly in palaces than in religious buildings, especially in the West from the 7th/13th century. There are several reasons for this: speed of construction, the need being to satisfy a master's whim the shortest delay; the use of unskilled slave labour capable of nothing more complicated than ramming concrete between two boards; and finally the general use of facings (coverings of plain or sculpted plaster, inlaid-work of enamelled clay or earthenware tiles) which completely conceal the body of the walls.

It is remarkable that the technique of cobwork (tâbâra) should have been described in detail by Ibn Khaldûn in his Mukaddimâ, and leads us to assume that he thought it a characteristically Muslim practice. Earth with which chalk and crushed baked earth or broken stones are often mixed is rammed between two boards kept parallel by beams. The wall is plastered over, often in such a way as to simulate joints of heavy bond-work beneath. When this plaster falls, the regularly spaced holes left by the beams become visible. In the Muslim West cobwork became general in the 5th/11th and 6th/12th centuries, especially in military building. In the Maghrib it seems to have been an importation from Andalusia, where it had long been known.

Unbaked brick (tawb), which sometimes serves as a facing for cobwork, is made of earth and cut straw rammed together in a wooden former. It is still in common use in Sahara towns, and was employed very early in arid regions, especially in Mesopotamia and Arabia. The walls of the Prophet's dwelling in Medina were probably built of this material, as are those of the 'Abbâsid mosques of Sâmârâ. We find it employed at about the same time in Ifrîqiya. The excavations at 'Abbâsîyya, the seat of the Aghlabids of al-Khayrâwân, have brought to light carefully moulded specimens of tawb 42 cm. long by half that measurement in width, and a quarter in thickness, which suggests that the cube used by the builders was 4 cm. long.

Baked brick (âdjurr), used so commonly in the Iranian world and by the Romans also, notably in the public baths, is to be found in all the Islamic countries, but was always par excellence the building material of Persia. It is of varying dimensions, and is sometimes cut on an angle or partly rounded off. It is used alone or with rubble in parts of a building where accuracy of line is important (pillars, pedestals, stairways, arches, vaults, etc.). It functions as horizontal tying material alternating with courses of rubble, or vertical tying, to maintain regularity of construction, especially at corners (A). Brick is as a rule covered over with plaster, but it may remain visible and add an element of colour, either the pink of baked earth or that of some enamel applied to its edges.

Rubble or rough-hewn stone was used in Sâsânîd building and is still used in Muslim Mesopotamia, as in the stronghold of Ukhaydîr (mid 2nd/8th century). In the 5th/11th century it seems to have been the material most familiar to the Berber builders of North Africa. It is used above all for the ramparts of towns before the introduction of cobwork (cob walls will often have a foundation of rubble), and also in waterworks. The cementing mortar and protecting plaster are of chalk, sand, crushed fragments of tile, and wood charcoal. An analysis of their
composition reveals a pattern of evolution which has been studied by M. Solignac (Recherches sur les installations hydroïques de Kairouan . . . in AEO Algiers, 1952-3), and allows us to date the works.

The use of ashlar continues a Roman and Byzantine tradition. Its homeland is in Syria, where ashlar has remained a common building material until our time. It was temporarily replaced by brick in Egypt, but came into use again in the Fatimid period (4th-6th/10th-12th century) especially in the fortifications of the Armenian Badr al-Djamali. In Ifrikiya it is used for the religious and military buildings of the 3rd/9th century and from the 7th-13th century was popular again with the Tunisian architects. In Spain it is the regular material in the Umayyad foundations; local tradition was there reinforced by Syrian influence. The Magribi takes it over in the 6th/12th century in the Almohad buildings.

As in the Byzantine period, walls built of rubble-work are frequently faced with ashlar. The bond-work, not as massive as the Roman, shows combinations of tiles and headers, whose chronology Velázquez Bosco has contrived to establish, for Cordova (Velázquez Bosco, Medina Azahra y Alamiriya, Madrid 1912) (B, B', B''). Almohad bond-work is of alternate thick and thin courses, which from Morocco pass into Tunisia.

To these materials we should add wood: longitudinal beams at times sunk in walls; at al-Kayrawân heavy planks form architraves above the capitals; small beams form ceilings and sometimes lintels, a practice not without risk to the solidarity of the building concerned.

Walls, the composition of which we have just indicated, are often flanked by buttresses. Projecting semi-cylindrical abutments of the old Mesopotamian type were added to the stone outer walls of the Syrian Umayyad strongholds, and the brick ones of the mosques at Sâmmarrâ. The great mosque at Tunis (3rd/9th century) has at its four corners rounded buttresses of apparently the same origin, and they are found again in a building of the Kal'a of the Banû Hammad (5th-6th/11th-12th century). The great mosque at al-Kayrawân was given massive rectangular buttresses, partly later than the original construction. The mosques at Cordova have similar use of buttresses at regular intervals around its periphery.

Among the supporting members found principally in the halls of mosques, columns deserve first mention. In early centuries in such regions as Syria, Egypt, Ifrikiya and Spain they were taken from nearby pagan or Christian buildings. When these quarries of shafts and capitals were exhausted Muslim sculptors made their own. Columns are generally cylindrical and not entatic. In the 10th-16th century and after they were imported from Italy to North Africa.

The re-employment of columns of limited size in a hypostyle hall intended to produce an impressive effect led to these supporting members being prolonged upwards. It was doubtless from Egypt (Amr mosque) that the builders of al-Kayrawân borrowed the technique of superimposing, as in the classical entablature, the support (= architrave), the impost (= frieze) and the cornice, with wooden ties bedded in the impost (C). The architects of the mosque of Cordova were perhaps inspired by the Roman aqueducts to superpose two rows of arches linking the masses of masonry raised above the columns (D).

The Almohad mosque of Hassan at Rabat (6th/12th century) shows a rare example of columns formed of superimposed tambours.

The pillar, a masonry support of square, rectangular, cruciform, or divided plan or flanked by false columns, is in general use in Persian architecture.

From the 6th/12th century it replaces columns in Persian prayer-halls in the Magrib. Tunisian mosques retain columns. The situation is found in the inner courtyards of houses.

Apart from the straight lintel formed by a single stone or oblique arch-stones surmounted by a relieving arch (Egypt, Syria), arches assume very varied forms (semi-circular, horseshoe, Persian arch with rectilinear divisions, etc.). These forms are not dictated by constructional requirements, but serve as ornamentation according to the architect's caprice. The arch-stones they contain are often purely decorative in function.

To cover prayer-halls Syria, the Spain of the Umayyad period, and, no doubt in imitation of the latter, the Magribi regions, had recourse to timber-work protected by tiled saddle-back roofs. Square buildings had pavilion-shaped roofs, i.e., with four slopes. Egypt and Ifrikiya retained terraces, which were preferred also by the Turkish masters of Algiers in the towns along the Algerian coast. The scarcity of timbers of the necessary dimensions led architects to bring closer together the walls carrying them, and to give narrow, long proportions to enclosures with ceilings (naves, rooms, etc.). The use of waggons-vaults or small domes placed together answers the same need.

The problem of vault and dome was solved in different ways within the Sasanid and Byzantine traditions, but Persian genius was to add note-worthy variations.

The question alluded to above of suitable timbers or rather of their scarcity is the determining factor in building the vault, whether semi-cylindrical or elliptical. Setting up a stone arch or vault demands the use of a wooden former on which the archstones are successively placed. The use of bricks, their lightness and the fact that they can be mortared together, allows another method which dispenses with the former: the construction of the "edge vault". This is frequent in Sasanid architecture and finds its most logical use in the specifically Iranian type, the iwân (the iwân so constantly used in Muslim Iberia is a three-walled room open on the fourth side, like a large niche with a flat back surface). The builder cements a first row of bricks on the rear wall, tracing out the curve of the vault; a second row is then cemented to the first, a third to the second, so that row by row the vault advances across the space to be covered (G).

Apart from the waggons-vault Muslim architecture uses the groined vault so familiar to Roman and Byzantine builders (two semi-cylinders intersecting at right angles [E]), and more rarely the cloister-arch vault (in which the four walls curve in above the space to be covered) (F) which occasionally serves as the end and culmination of the waggons-vault.

As for the dome, the fine examples constructed in the Byzantine era were the prototypes of the Turkish domes, but this feature also was the subject of variations which Muslim art owes to Persia.

As is known, there are two main types of solution to the problem of how to place a semi-circular or eight-sided vault on a square base: the pendentive (H), the customary practice in the Byzantine world (cf. St. Sophia at Istanbul), and the more specifically Iranian squinch (I). This squinch, a quarter sphere of the head-arc of which projects over the corner of the square supporting it, sometimes assumes with its
radiating flutings and indented edge the grace of a marine shell (J). In the Grand Mosque at Damascus and that at Cordova it takes the form of a small niche, North-African and Sicilian architecture knew the squinch as a half groined vault (a groined vault cut diagonally) (K). Finally Persia contrived the super-position of several ranks of cell-like niches, the probable origin of the nakbaran (= stalactites) (L).

Above this zone where square and circle are brought into union there frequently rises a circular zone pierced with windows to let in the entry of light, and surmounted by the dome proper.

Persian architects, profiting from the advantages offered by brick, showed great ingenuity in erecting widely differing domes. Such is the ribbed dome, of light arches crossing above the space to be covered, and supporting counter-arches which fill the intermediary gaps. This type of dome, which was known from the time of the Sasanids (A. Godard, Voiles orientales, in Alhâr-e Irân, 1940), passed from Persia to Spain (3rd/9th century), then from Cordova and Toledo became known in the 6th/12th century, in the Magrib and about the same time throughout south-west France. (G. Marçais)

BINBASHI, ‘head of a thousand’, a Turkish military rank. The word appears at an early date among the Western Turks, and it appears early in use in connection with the military reorganisation said to have been made by Ordân in 720/1320-9 (e.g. Sa'd al-Din, Tâdi al-Tâvirdîkî, i, 40—‘onbashî, yüzbâshî, and binbashî were appointed to them... ’). In the form minbashî the term also occurs among the Eastern Turks, and is used, for example, of a rank in the Safawid forces in Persia (V. Minorsky, Tâdâkirat al-Mulâk, London 1943, 36, 74, 115). The title mîh-bea, with a similar meaning, also appears in the memoirs of Bâbûr. The term binbashî does not seem to have been much used in the regular Ottoman forces of the classical period. It reappears, however, in the 18th century, and is used to designate the officers of the newly raised mîrî ashkerîs, a treasury-paid force of infantry and cavalry. In the campaign of 1769 there were already ninety seven regiments of mîrî ashkerîs, each commanded by a binbashî. The binbashî received 2000 payats of piaster for the campaign, plus a tenth of the pay of his men. (D’Ohsson, Tableau général de l’Empire Ottomân, vii, Paris 1828, 381-7; cf. Remi Efendi, Khuldsatal-i’tibar, Istanbul 1286, 12 ff.). From the end of the 18th century, (Djewdet, Ta’rikh, vi, 367), binbashî became a regular rank in the new, European-style armies, style to be able to bring into union. After the accession of Abd al-Azîz, the pay of a binbashî was fixed at 1,500 piastres a month, or 4,140 francs a year (Ubcini, Lettres sur l’Asie, 1909). In Egypt the title binbashî, along with other Turkish military terms and commands, was used in the army of Muhammed ‘Ali Pasha, and remained current under subsequent régimes. In the Arab countries it is sometimes pronounced bikbashî, presumably through a distortion of the Turkish sakhrî nân (h = CastException).

BINGÔL, name of a town in ancient Turkish Armenia, previously called Çapakçur, capital of a vilâyet partly filled by the mountain range of Bingöl Dağı. It is situated on the Gûnîk Su, a tributary of the Aracani-Ararsan-Murâd Su, and on the road joining Elazîg via Palu and Mush (M. Canard).

BINGOL DAGI, name of a mountain massif, a raised but not volcanic plateau, which stretches south of Erzurum across the vilâyets of Erzurum, Mush and Bingöl (Çapakçur). Its highest peak in the east is Demir or Timur Kale or Ka’fa (Fortress of Iron), over whose height there is some disagreement among different writers: 2690 ms according to H. and R. Kiepert, Formae orbis antiqui, pl. V, 1910, Abos Mons, cf. above, 655; 3650 ms according to the Erzurum sheet of the Harta Genel Direktörülü, 1936; 3250 ms according to the road-map of Vâharlar Genel Müdurlü, 1951; 3700 ms according to Banse; 2977 ms according to Blanchard. It dominates the high plain of Varto (formerly Gümölm). The western peak, Bingöl or Toprak Kale (Fortress of Earth) is almost as high. The northern part of the mountain is cut of by two circular depressions separated by a sharp ridge.

Bingöl Dağı is a true water-shed. It contains numerous little lakes from which it gets its name of mountain (dağ) of a thousand (bin) lakes (göl). The Araxes (Aras, al-Rass) in the north, the Tuula Su, a tributary of the northern Euphrates, and the Bingöl Su in the west, the Gönûk Su in the south-west, the Carbughar Su in the south, and the Kînis Su, the four last tributaries of the Murâd Su, in the east and north-east, all rise here. Armenian legend makes it the site of the earthly paradise. In classical geography it is called Abos Mons. The Armenian name is Srmane (Greek Στρατεύματος). Arab geographers and historians do not refer to it, although there is some mention in the wars between the Hamdanids and the Byzantines in the 4th/10th century of the place Hâfîdji (Arm. Hâvîči) situated to the south of Kâlíkâl-Erzurum and in the Bingöl Dağı at the source of the Araxes. Tavernier is the first among European travellers to give the name of Bingöl Dağı. The Kâfi-Bâsh (q.v.) lived in this region.

BINYAMIN, the Benjamite of the Bible. In its narration of the history of Joseph (Yûsûf, [q.v.]), the Qur’an gives a place to the latter’s uterine brother (xii, 8, 59-79), without ever mentioning him by name. Tradition embellishes without any great variation the biblical story concerning him (it is aware notably that his birth cost his mother her life) and receives also Aggadic additions (summarised notably in the Encyclopaedia Judaica, xvi, 1904, 1171-144), such as the etymological connexion of the names of his sons with the lost elder brother. In Muslim mysticism, the pair Yûsûf-Binyamin symbolises the primordial relationship between God and the sinner.
Bibliography: Tabari, i, 360, 393, 397-404; idem, Tafsir, xii, 87, 100, 157; Tha'labi, 'Arul's al-Id, 82, 85; R. Blachère, Le Coran, 475 ff.; A. Geiger, Kat. arab., ed. A. von Kremer, I (1883), 17-34. Then the bucket is drawn up by hand; this hard work may be done also by animals, mostly camels (sawa'in, sing. samo'ya), accompanied by a driver (sakh) and moving from and to the well in wearing clothes (cf. Arabum Proverbia ed. Freytag, 1, 624, nr. 65; sayru s-sawa'ini s-safran l-a yamhali'). For the poetry the well is poured into drinking troughs or cisterns next to the well (bird, etc., sing. bard) the fallen-in remains of which are often described in the poetry (see Nöldeke on Zuhayr Mu'addil, 5).——Water-wheels set in motion by means of a crank and more complicated hydraulic machines were not known in ancient times; the use of "double buckets" ascending and descending at the same time (to which in Hamad and ed. Freytag, 439 v. 5 the two stirrups of a rider seem to be compared) was not indigenous and must have been very rare.

Numerous quotations of the well and its several designations or epithets, of its appurtenances, of the various sounds produced by the roller, the rope, the bucket etc. (see Bräunlich, Well, Index, 519-26) illustrate the vital importance of the well and its belongings for life throughout Arabia. Still more instructive are the frequent similes, proverbial and metaphorical sayings referring to the parts and functions of the well. For example, the lance: often compared with tightly stretched well-ropes (cf. Nöldeke to 'Arara, Mu'addil, 66 and Delectus 45, 6; 70, 2); a riding shooting forth is described as resembling labourers suddenly flying forward when the rope which they are drawing breaks (Dāwād Hādāyil ed. Kosegarten, 93, 36); the dead body is let down to the grave like the bucket to the well (Abū Dhu'ayyīb, 24, 11 f.; Hamadī, 439 v. 4; Ḥuṣayrā, 35, 5) kalbat matāhirūhā "his well-axles wobble" means "his affair became unsettled" (Lane, 667a); finally, a man keeping his word and incessantly striving towards his goal is praised in a marthiya as "one who, whenever he spoke a word, (like a well-digger) caused water to gush forth from the earth" (Hamadī 386 v. 2).

Bräunlich, The Well in Ancient Arabia, in Islamica, i, 1924-25, 41-76, 288-343, 454-528 (an exhaustive study, based on all the available lexicographical and literary references, to which the present article is greatly indebted); E. Wiedemann, Beiträge zur Geschichte der Naturwissenschaften, x, Erlangen 1906, 315, 335-337 (details from medieval times); H. Kiehe, Kraemer, curso Bibelworterbuch, 1903, 286, s.v. Jakobsbrunnen and J. J. Hess, in Der Islam 4, 1913, 317 f. (informative figures; see also the books of European travellers like Doughty, Euting, Musil etc.)——A Kitāb al-Bīr, composed by the famous philologist Ibn al-Arabi (died 231/844), but apparently not mentioned by the Arab bibliographers, is reported to be preserved in Cairo (see Brockelmann, S. I, 180).

Modern Arabia

The eastern Arab lands, with few rivers or none at all, place great reliance on springs and wells. The location and nature of watering places (mawrid or simply mār; pl. mawṣik; with various colloquial forms such as mol in southern Arabia) go far towards determining whether life is settled or nomadic. The flowing water of springs (sayr, pl. 'wayn) is usually...
abundant enough to sustain communities in oases of groves and fields. Water from wells (bîr, colq. bid, with the pl. abîyâr prevailing in Arabia; or badî, pl. budîn), which must be lifted out, may supplement the supply from springs, while in other instances it suffices to support large towns (until recently al-Riyadh, the capital of Saudi Arabia, drew almost all its water from wells). In still other instances, water comes from wells scattered throughout desert tracts. Even when desert wells endure much longer than ephemeral sources such as moisture-laden sands or seepages from rain in the rocks, there is rarely enough water for irrigation, and the wells are frequented by nomads and other travellers rather than permanent settlers.

In the oases private ownership of wells tends to be the rule; a landowner or husbandman nurtures his crops with water belonging to the one or the other. Large wells, however, may be communally or jointly owned; Philby, for example, estimates the ownership of the remarkable well of al-Haddâdî in Tayma as divided into about thirty shares, with each share holding about three pulleys for drawing up by camels.

In the desert the nomad's first concern is the presence of water, next its accessibility, and then its potability. Doughty has described the skilled well-sinkers of the towns. The Bedouins are perfected both water-finders and well-sinkers, gifted with amazing shrewdness in ferreting out sources where the uninitiate would never suspect them. The site may be entirely new (such a well is often called a bid, pl. budî, or badî, pl. budîn), or it may be an old well buried (mandafina) or dead (mawzita). The water may be close to the surface or deep in the earth. The Bedouins occasionally dig to depths of a hundred metres or more, the depth being measured in terms of the Arabian fathom (bid, the spread of a man's outstretched arms, or bidma, his height, i.e., about five feet six inches; a well of many fathoms is called tawila, pl. tawil, rather than 'amika). Mechanical drills now reach greater depths in even the most arid regions, such as al-Rubâ al-Khali (such wells are called kalama, coll. kalam). Much-used wells or those with sides likely to cave in are strengthened with casings of stone or other materials (a cased well is called mawtusya, and one cased with stone a mardis). The proportion of minerals in the aquifer determines whether the water is sweet (hâlî) or salty (mâtith). Although the Bedouins tolerate a much higher mineral content than an outsider does, even they cannot drink from certain desert wells (hâsnur, pl. hâshirân). In such cases their constant companion the camel swallows the brine and produces milk with the salt filtered out.

Wholly private ownership of desert wells is uncommon. If a man's name is associated with a well, such as Bîr Hâdi in al-Rubâ al-Khali (named after the late Hâdi b. Sultân of Al Murra), the eponym is usually the digger or redigger, who may as a consequence hold a title of sorts to the well. Wells falling within the dîra of a tribe may be considered its property, but the water is still free to nomads from other tribes not at war with the possessors. Water in the wilderness is too precious to be made an article of commerce.

In summer, when the desert pastures offer no vegetation to slake the thirst of the herds, the nomads camp for weeks or months at their favourite wells, sometimes with hundreds of tents pitched together. As places of assembly in hot weather and to a less degree in winter, wells have often been the scene of surprise attacks and battles in tribal warfare.

**iii. The Maghrib.**

Bîr is the common name given to various types of well, usually but not invariably to lined wells (rarely faced with stone but more often with dry stones or, in certain regions of the Sahara, with palm stems, for which reason they are sometimes cut on a square plan). It can designate also an unlined well, the type which is most common in the Sahara, where the earth is merely loosened and hollowed out into a basin at the bottom of which the water-level appears (Fezzan). But other terms besides bîr are used. Hâsî (pl. hasýan) is often the only term used in this sense in the Sahara for wells which are mostly unlined and without lips, whilst elsewhere it means a simple hole dug in the bed of a wâdî (Tunisian and Tripolitanian steppes). The word ogla ('ubla) usually a temporary pool stretching along the bed of a wâdî in the Sahara, and in this meaning synonymous with châdîr, in the Tunisian steppes can also mean a well several metres deep without facing or lips, dug at the bottom of a hollow where the underground water-level is near the surface; the same are sometimes to be found in the Sahara (Tindouf) where oglas exist in the beds of the wâdîs.

In fact the wells of the Maghrib and the Sahara at least west of Egypt, can be grouped into 3 principal types: (1) wells meant for the use of men and for watering animals. Lined or not, sometimes adjoined by a watering trough, they have no superstructure or at the most 3 branches meant to carry a pulley of wood or iron. The water is drawn by hand in a water-skirt or a leather bucket hung on the end of a rope. (2) Wells which have some sort of elevating mechanism and are used for irrigating gardens and palm groves; these are varied enough. (3) Artesian wells, situated within very narrow geographical limits, especially in the past, and used essentially for irrigation; since they are gushing they need no superstructure.

Among the wells with an elevating mechanism, the most common are those which use animal traction and a pulley; they are sometimes called sânsâya. The water is drawn in a dalw (bucket) holding 15 to 35 litres, made of ox or goat hide, which has a flexible pipe at the bottom; this, which is folded back during the drawing of the water, is straightened when it comes to emptying into the dalw into the little basin which feeds the sagyas (sâkiya = funnel). The uprights which carry the axis of the pulley are sometimes made of stone or clay but more often of wood or palm stems. The pulling is done by an ox or a donkey and sometimes by a camel (Tunisia), but only very occasionally by a mule (Tunisian Sahel); the animal is guided and helped in its journeys up and down an inclined path by a man or child who at the same time works the string which folds back or straightens the pipe which empties the dalw. The wells and their superstructures may be held in common by several owners, but each one draws water with his own dalw (with its ropes and strings) and by means of his own animal. These wells worked by animal traction can be found anywhere from India to the
Atlantic and art encountered especially in eastern Tunisia from Bizerta to Djerba, on the coast of Tripoli, in the Hawz of Marrakesh, in the north-west Sahara (Tafilalet, mzab), in the Touarag country, in the oases of southern Cyrenaica, in part of the southern Sahara, especially Lower Mauretania, and on the borders of western Sudan.

Wells with a balancing-beam, like the Egyptian ḥuḍāla, have various names: ḥofṭīāra (pl. ḥofṭīʿītār) in the Fezzân and the Souf, ḥarḥbaru in the regions of Zibâb and Gourara. The balancing-beam, made of a thin pole pivoting on a little wall or on a wooden crossbar resting on two uprights, has a counterweight at its base, and at its other end some sort of receptacle for drawing the water (hekma in the Fezzan, genino at Gourara), which only holds between 5 and 10 litres of water. It works more quickly than a dalâw but it is not usually capable of irrigating more than a few hundred square metres, for it is used where the underground water-level is not very deep (a few metres) and has a small yield. It is primarily the poor man's well; one man can dig it, set it up and work it, and it needs neither an animal nor an expensive dalâw. Well-known not only in Europe but as far afield as China, this type of well is very rare in the Mahgrib and on the coast of Libya. It is found in the Sahara the Lower Dra (Morocco) and in the region of Saoura at Tindouf, and in southern Mauretania, in the regions of Touat and Gourara, at Ouargla El Golea and at Ghadames, both in the north and the south of the Fezzan, in the oases of Cyrenaica at Kufra, in the regions of Aïr, Tibesti and Borku.

The noria or Persian well (ma'dîra and sometimes sânya) is an apparatus with buckets fixed onto a revolving chain, worked by an animal-driven wheel drawn by a horse, mule or camel. The traditional type is made of wood (most commonly olive-wood) with earthenware buckets fixed by means of ropes. It is being more and more replaced by a cast-iron apparatus with metal chain and buckets worked by an oil or electric motor, at least on the coastal plains of Morocco, Algeria and northern Tunisia, where it is sometimes used by European market-gardenerers of Mediterranean origin who were accustomed to using it in their native country. It has to compete there with various types of pumps. In the Sahara it is only to be found in northern areas such as Tafilalet, Oued Righ and Tripolitania. In Morocco, large hoisting wheels with well-base rims, worked by river-power, are also called norias. They are only used in the neighbourhood of Fes.

As for artesian wells, they were only to be found at one time in the region of Oued Righ (182 of them were active in 1856), and in small numbers in the eastern parts of the Shâtî (Fezzân) where they are called ʿayyân (sing. ʿaym); they were dug by specialists and were very fragile. They have increased in number, but are nowadays drilled and harnessed according to modern techniques, throughout the Lower Sahara from El Golea and Ouargla to Zibân, and from the Hodna to the Djerid and Netâzâwa; some have been drilled in Tripolitania and in the Fezzân.

BPR MAʿŪNA, a well on the Mecca-Medina road, between the territories of ʿĀmir b. Ṣaṣaʾaʾ and Sulaym, where a group of Muslims was killed in Ṣafâr 4/625. The traditional account is that the chief of ʿĀmir, Abū Barāʾ (or Abū ʿI-Barâʾ), invited Muhammad to send a missionary group to his tribe, promising his personal protection for them. So a group of “Kūrān-readers” (burra?) was sent from Medina. When they reached Bīr Maʿūna, they were massacred by clans of Sulaym, led by ʿĀmir b. al-Ṭufayl, who had failed to induce his own tribe of ʿĀmir to violate their protection for the Muslims. The Prophet grieved over the slain, and cursed the Sulamis daily until Kurān, iii, 169/163 was revealed.

This account has been interpreted to give a military failure the aura of religious martyrdom. The sources number the burra? variously as 70, 40 and 29, but Wâkidî names only 16. A large number cannot yet have existed, and was unnecessary for a religious mission. It was, indeed, an actual campaign, described as a raid (sariyya, ghazwa) in the sources; one specifically says its leader was sent “as a spy among the Najdî folk”. Muhammad had apparently been invited to intervene in an internal dispute of Sulaym, but the incident is also mixed up with the quarrel within ʿĀmir between Abū Barâʾ and ʿĀmir b. al-Ṭufayl. The latter cannot have led the attack, and may merely have encouraged the Sulamis from the background, since Muhammad did not curse him, unhesitatingly paid him the wergilds for two ʿĀmirites slain, on the way home, by the sole survivor of Bīr Maʿūna, and did not seek wergilds from him for the slain Muslims.

BīR MAYMŪN, a well in the environs of Mecca. Although the well was famous in early Islamic times, the name no longer occurs in the Meccan area. Available sources fail to show whether Bīr Maymūn has been abandoned or is still in use under another name. The location of the ancient well is also uncertain. Much of the evidence places it between the Great Mosque and Minâ, somewhat closer to the latter. The account given by al-Ṭabarî, iii, 456, of the death of the Caliph al-Manṣūr at Bīr Maymūn in 158/775 indicates that the well lay inside the Sacred Zone (al-Barâm) and suggests that it was on the main road for pilgrims from Iraq (another version has the death of al-Manṣūr take place at the hill of al-Hadîj, not at Bīr Maymūn; see Wüstefeld, Gesch. der Stadt Mecca, Leipzig 1861, 160). Other evidence situates Bīr Maymūn farther north of Mecca near Marr al-Zâhrân (now called Wâdî Fâtima). According to al-Hamdânî, i, 128, Bīr Maymûn was one of the two oldest wells in the world; according to al-Bakrî, Muʿjam, Cairo 1945-51, iv, 1285, it was much older than Zamzam. If it was of any such antiquity, it must have been...
BPR MAYMON — BIREDJIK 1233

... indications, was an Ismāʿīlī; he died about 719-20/1320.

Birdjand was for long eclipsed by Kā'īn, but in the 19th century it took the place of the latter as the chief town in Kūhīstān. It is now administrative centre of the districts (qāhīrāt) of Birdjand and Kā'īn, under a ārāmdār or governor. In 1946 the population was 23,488, but is now lower, due to the migration of some of the inhabitants to Maqhdad and elsewhere. The town has a piped water supply, the water being obtained partly from ḫanās from the Kūh-Bakrān to the south, and partly from a deep well in the town itself.

As in former times, the country round produces much saffron, and nuts of all kinds are also grown. The district has long been famous for the quality of its carpets and rugs, most of which are made in the village of Darakhsh, 80 km. to the north-east: it is also renowned for its barākās (garments made of camel’s hair). Birdjand enjoys some prosperity due to its being on the main road between Maqhdad and Zāhīdān; it is also connected by road with Kirmān.

BIREDJIK, a town in Mesopotamia, on the left bank of the Euphrates. The name Birdjik (amongst the local population, Beledjik; also, according to Sachau, Bārdjīk in the Ḥalabī (Aleppo dialect) means “little Bira”, i.e., “small fortress” (Arabic bīra, with the Turkish diminutive suffix). The Arabic name “al-Bīra” (= Bireh in the later Syriac writers) derives from the Aramaic “Bīrā” = “fortress”. Birdjik, known to the Romans as “Birtha”, is to be identified (according to Cumont) with a certain Makedonopolis mentioned in some of the Byzantine sources. The town is called “Bile” in the Latin chronicles relating to the Crusades.

At Birdjik one of the main routes from northern Syria into Mesopotamia crosses the Euphrates. The river here flows out of the mountains into the Syrian-Mesopotamian plain. It is here, too, that the Euphrates first becomes navigable, after leaving behind the cataracts formed where it breaks through the Taurus range. An isolated cone of calcareous rock, which rises sheer out of the river at Birdjik, has been fortified from remote times as a protection for this important passage of the Euphrates. A bridge of boats existed here in Seleucid times, running from Zeugma on the right bank of the river to Apamea (= Bīrā) on the left bank (the Seleucid name Apamea was perhaps never in current use and disappeared in favour of the Aramaic “Bīrā”3). Apamea, at first a suburb of Zeugma, came in due course, owing to its possession of the fortress, to be far more important than Zeugma, which faded out of existence. There is evidence (cf. Khalīl al-Zahiri) that a bridge was still to be found at the river passage of Birdjik in the second half of the 13th century.

The older geographical works in Arabic make no mention of al-Bīra. This name first appears in such treatises about the middle of the 13th century, e.g., in al-Dimīshqī and Abu l-Fīdsī. References to al-Bīra in historical literature make their appearance, it

Encyclopaedia of Islam 78
would seem, at the time of the Crusades. The Latin Counts of Edessa held the town from 492/1098-99 until 545/1150, when the Christians, unable to maintain it after the loss of Edessa to the Muslims in 539/1144, surrendered it to the Byzantines, who soon lost it, however, to the Urtukid lord of Maridm. In 539/H44* surrendered it to the Byzantines, who

**BIRGE** (Birgi, sometimes also Bergi or Biriki), a small town in western Asia Minor situated in the valley of the Köyük Menderes, is the centre of a nahiye belonging to the badem of Aydın. The town was known in Byzantine times as Χρηστοπόλεις and also as Πυγγίον. It was raised to the status of a metropolitan see between 1193 and 1199, being thus freed from the ecclesiastical control of Ephesus, but it became once more a suffragan bishopric of Ephesus in 1387. The Catalans under Roger de Flor drove the Turks from the town in 1304 and at the same time plundered it. Birge passed thereafter into the hands of the Turkish Beys of Aydın. Monuments dating from the period of their rule—notably the Ulu Djami—still are to be seen in the town. Birge came under the control of the Ottomans in 1293/1391 and remained in their possession thereafter, save for a brief interval during the war of the principes of Aydın, regained to empire by Timur Beg, held the land once more (1402-1245). The town suffered considerable damage between the years 1920-1922 during the course of the war which was then being waged between the Greeks and the Turks in western Asia Minor. Birge had, in 1945, about 2150 inhabitants.

BIRGE — BIRS

BIRGEWî (Birgiwî, Birgîlî), MEHME'D B. PIL 'ÂTî, a Turkish scholar whose fame still lives among the common people. Born at Ballkesir in 928/1522 (or 926/1520 if Katibi Celebi is correct in saying that he died at the age of 55), he began his education at home, but soon distinguished himself among his coevals and went to Istanbul, where he attached himself first to Akhlâzî Mehmed Efendi and then to the kâdî-i tâskar 'Abd al-Râmîn Efendi. Having completed his education he taught in the medreses of Istanbul, and during this time was initiated into the Bayramîyya by Shâykh 'Abd al-Râmîn Kâramânî. Through the influence of his master 'Abd al-Râmîn Efendi he obtained the post of kâsim to the army at Edirne, but soon afterwards desired to withdraw both from this office and from teaching. His shâykh however would not consent to his totally abandoning teaching and preaching, and when his fellow-townsmen 'Âtî Allah Efendi, the tutor of Selim II, offered him the position of muderris in the medrese he had built at Birgi, he accepted. His career of teaching, writing and preaching at Birgi, (whence his appellation of "Birgîwî, Birgîlî"), MEHMED B. PIL 'ÂTÎ died of the plague.

Like Ibn Taymiyya, he set himself firmly against all innovation in order to protect the sacred law, and no considerations of rank would cause him to concur at any non-observance of the faith. Towards the end of his life he even made the journey from Birgi to Istanbul to advise the grand vizier Mehmed Pasha about the rectification of some irregularities which he had observed. Birgîwî, an utter fanatic in religious matters, would not abide the slightest gloss at any of the sacred words. Commentaries on it were written by Kadîli Khâdîm Efendi and 'Abî al-Ghani al-Nâbulûsî, Evin Efendi adopted it as his guide to conduct, and was consequently dubbed "Tarîqâtî"; after him there even came into being a "tarîkah" of the text.

KASIM KUPREVÎ

BIRR (Kur'ânic term), "pious goodness" (R. Blachère's translation); see Kur'ân, ii, 189). In the analysis of the spiritual states (awâlî) and the attitude of the soul towards God, it must at the same time be compared with and distinguished from takhîz [q.v.].

BIRRS, also called BIRRS NIRMÔD, in the older literature Bûrs, a ruined site 9 miles S.W. of the town of Hillû on the Euphrates, about 12 miles S.S.W. of Babylon on the eastern shore of the Lake of Hindiyûa.

The place is the ancient Borsippa, the sister town of Babylon. Its immense ruins, the largest that have survived from the Babylonian period, were thought by the Arabs to be the palace of Nimród b. Kanîm (sarb Nimród, Yâkût, i, 136) or of Bûlûtmaşar (Yâkût, i, 165). Even in modern times they were thought to be the ruins of the Tower of Babel and this erroneous view used to crop up even after H. Rawlinson had proved from inscriptions that they were the ruins of the tower of the Temple of Nebo of Borsippa. Whether there was still a town on the ancient site in the early Islamic period is not quite clear. Balâdhirî only speaks of the "Adjamât Bûrs (Assy. agamîl, the land around the marshy lakes of Bûrs which were taken possession of by "âlî. Upper and Lower Bûrs appear in Kûdîm and are called al-Sibây and al-Wûsûf by Ibn Khûrûradîghî in the lists of taxes, as districts (kasûdî) of the circle (asûtûn) of central Bûlkubûhî.

In even ancient times the district of Babylonia and in particular Borsippa was famous for its textile industry (e.g., Strabo, xvii, 1, 7). This in-
industry survived into the Arab period. The garments made in the district of Burs were, accordingly, mentioned by Mas'udi (Muradi, vi, 59) called Bursiyya or al-Burs. The garments were made in the district of Burs, Babil and Hilla (following G. Hoffmann's emendation). In Yakyut, iv, 773, Narsiyya should therefore be emended to Bursiya.

(E. HERZFELD)

**BIRN** in, Persian 'outside', the name given to the outer departments and services of the Ottoman Imperial Household, in contrast to the inner departments known as the *Enderen* [q.v.]. The Birun was thus the meeting-point of the court and the state, and besides palace functionaries included a number of high officers and dignitaries concerned with the administrative, military, and religious affairs of the Empire.

(B. LEWIS)

**AL-BIRUNI** (BERUNI) Abu 'l-Rayhân Muhammad b. Ahmad, also sometimes called by the nisba al-Khwârizmî by certain Arabic authors (e.g., Yâkut), and also, at the risk of a confusion of names, by some modern Orientalists (see al-Khwârizmî!), was one of the greatest scholars of mediaeval Islam, and certainly the most original and profound. He was equally well versed in the mathematical, astronomical, physical and natural sciences and also distinguished himself as a geographer and historian, chronologist and linguist and as an impartial observer of customs and creeds. He is known as al-'Usâlah, "the Master". He was born of an Iranian family in 362/973 (according to al-Ghadanfar, on 3 Dhu'l-Hijja/4 September — see E. Sachau, *Chronology*, xiv-xvi), in the suburb (birun) of Kâh, capital of Khwârizm (the region of the Amû-Darya delta, now the autonomous republic of Karâlkalpakistan on the southern shores of the Aral Sea). He spent the first twenty-five years of his life in his homeland, where he received his scientific training from masters such as Abû Naşr Mansûr b. 'Ali b. 'Irâk Dîjlânî, the mathematician. Here he published a few early works and entered into correspondence with Ibn Sînâ, the young prodigy of Bûkhârâ, his junior by seven years. It would appear that he went in person to see the Sâmânî sultan Mansûr II b. Nûb (387-389/997-999), whom he praised as his first benefactor. Next, he went for a long stay to Djurджan, south-east of the Caspian Sea, apparently in 388/998 at the Ziyârid sultan Abu l-Hasan Kâbûs b. Washmgir Shams al-Ma'llî returned from exile; from there he was able to go as far as Rayy (near Tehran). It was at the Court of Djurджan that he wrote his first great work, on the subject of calendars and eras, and important mathematical, astronomical, meteorological and other problems. This was dedicated to Kâbûs, probably about 390/1000, without prejudice to much later emendations and alterations; the *K. al-

**Athâr al-Bâbîyân 'an al-Kurâ'n al-Khâliya (Chronologie orientalischer Völker*, published by Edward Sachau, Leipzig 1876, reprinted by helioplan, Leipzig 1933; English translation entitled *D'Ohsson*, *Bibliography:*)

In *The Chronology of Ancient Nations*, London 1879). Brought up in the Iranian dialect of Khwârizm, al-Birûnî spoke Persian, but deliberately chose to use the Arabic language in his scientific writings, though some later works may have been written in Persian or in Arabic and Persian simultaneously. Having returned to his own country before 399/1009, and having been received by Prince Abu l-Hasan 'Ali b. Ma'mûn, he was able to give his services for seven years to the brother of this prince, the Khwârizmshâh Abu l-Abbâs Ma'mûn b. Ma'mûn, and was entrusted, because of his "golden and silver tongue", with delicate political missions.

After the assassination in 407/1017 of the Khwârizmshâh by his rebellious troops and the conquest of the country by the powerful Ghzawûd sultan Mâhmûd b. Subuktâkin, many prisoners were led away to Ghâzna in Sind (Afghanistan) in the spring of 408/1017, including learned and wise men among whom were al-Bûrînî, Abû Naşr already mentioned, and the physician Abu l-Khâyr al-Husayn b. Bûbû al-Khâmmâr al-Baghdâdî. Ibn Sînâ must have left Djurджanîyya for Djurджanî of his own free will in 398/1008 together with the Christian physician, Abû Sahl l-Isâ b. Yaḥyâ al-Maskil al-Djurджânî. This physician had collaborated closely with al-Birûnî, even to the point of writing a series of works in his name, as did also Abû Naşr (see below). Al-Bîrûnî, henceforth retained at the Court of Ghâzna, possibly as official astrologer, accompanied Sultan Mâhmûd on several of his military expeditions to north-west India. Here he taught the Greek sciences and received in exchange, with his initiation into Sanskrit and various dialects, the inestimable sum of knowledge which he put into his *Description of India*, completed in 421/1030 shortly after the death of Mâhmûd: the *K. Ta'rikh al-Hind (Al-Buruni's India*, ed. E. Sachau, London 1887; English translation, 2 vols., London 1888, 2 1910). The previous year, al-Birûnî had written an abstract of geometry, arithmetic, astronomy and astrology: the *K. al-Ta'khîm li-Awâ'î Sind'î al-Tângîm*, English translation facing the text by K. Ramsay Wright, London 1934.

It was to Sultan Mâshûd b. Mâhmûd (421-432/1030-41) that the Master dedicated this third principal work in 421/1030, reserving the right to add the finishing touches later: the *K. al-Kânîn al-Mâshûdî fi 'l-Hay'a wa 'l-Nâjîm* (Canon Masudicus, Haydarabad (Dn) 1954-56, 3 vols.). According to Yâkût, Ma'sûd offered the author an elephant-load of silver pieces for this work, but al-Birûnî refused the gift. In spite of this, he was provided with the means of carrying out his scientific and literary work to the end of his life. The treatise on mineralogy which he wrote during the reign of Sultan Mawdûd b. Mâshûd (432-441/1041-49) has come down to us; it is the *K. al-Dinâmîr fi Marjat al-Dinâmîr*, ed. F. Krenkow, Haydarabad, (Dn) 1936. In a last important work, still unpublished, the *K. al-Sayyadâl fi 'l-Tibb* on medicinal drugs, (see H. Beveridge, *An Unknown Work of Al Biruni*, in *JRAI* 1902, 333-5). M. Meyerhof, *Das Vorwort zur Drogenkunde des Birunî* (ed. and trans.), Berlin 1932 the Master declared himself to be over 80 (lunar) years old. The date of his death, usually fixed in 440/1050, according to al-Ghadanfar, must therefore be put back a little. Al-Birûnî must have died after 445/1050, probably at Ghâzna.
The total number of his works is considerable. In his *Risāla fi Fihrist kutub Muhammad b. Zakariyya al-Rākūn*, ed. P. Kraus, Paris 1936 he includes (in 427) the *Fihrist* of his own writings, of which 103 are completed, 10 unfinished (among which are the *Chronology* and the *Canon Masʿūdi*), 12 have been written in his name by Abū Naṣr, 12 by Abū Sahl and 1 by Abū ʿAll al-Ḥasan b. ʿAll al-Dīnī; making a total of 138.

BIRZÁL, BANû, a Berber tribe of the Zenata group mentioned as living in the Lower Zab (south of Mulla) at the beginning of the 4th/10th century. These Berbers, in conflict with the Fatimid Caliph, 'Ubayd Allah, who built the fortress of Mulla as a look-out against them, supported the Kharidiite group mentioned as living in the Lower Zab (south of Mulla) at the beginning of the 5th/nth century, the agitator, Abu Yazid and offered him refuge. His great-grandfather, Zaki al-Din Muhammad b. Baha al-Din, an official of the judiciary and scholar. He was born in Damascus in Djumada I or II, 665/February-April, 1267. A case could be made for the earlier date, 663, but al-Birzal was present in Syria at the beginning of the 7th/13th century. Zaki al-Din's additional nickname, al-Jibli, shows that he himself, or one of his ancestors, had previously lived in Seville. A work of his is preserved in Damascus (cf. G. Makdisi, in BSOAS, xviii/1956, 22); copies of two volumes of Ibn 'Asakir's History of Damascus written by him are preserved in Bankiopore (Cat., xii, 144 ff., nos. 800-801; cf. also v, 2, 223, no. 481). Al-Birzal's grandfather, who succeeded his father in the position of imam at the Fallus Mosque (Fils [?], according to the vocalisation indicated by J. Sauvaget, Les monumens historiques de Damas, Beirut 1932, 60; cf. al-Nu'aymi, Dâris, i, 86, ii, 361), died a young man of twenty-three years in 643/1245-46, leaving al-Birzal's father, Bahâ al-Din, to be brought up by his maternal grandfather. Bahâ al-Din, an official of the judiciary and accomplished scholar, died 699/1300 in his sixtieth year (cf. Ibn Kâdî Shuhba, Fîlâm, anno 699).

As a member of a family of scholars, al-Birzal, together with his brother Zaynab, received his instruction from his father and other famous scholars. Ibn Taymiyya, for instance, lectured in his home (Bankiopore, Cat., v, 2, 180). He started out very young, but precocious as he was, he retained his love for scholarship all his life. He went through the full curriculum of religious studies, served for a while as an official witness, but spent most of his life as professor of hadith in Damascus colleges, his principal position being that of the Nûriyya (ajdâzah from his courses there in Bankiopore, Cat., v, 2, 50 f., 198 f.). He undertook the pilgrimage several times and died at Khulays in the holy territory on 4 Dhu 'l-Hijja 739/13 June, 1339. His children, among them Muhammad and Fîtima, both gifted scholars, had died before him. Among his many students and colleagues were the most prominent scholars of the time, among them al-Dhahabi. There is unanimous agreement among his biographers that he was an unusually attractive person, good-looking, modest, generous with his books and his knowledge, blessed with a good handwriting, extremely industrious as a scholar, and enjoying the confidence of all scholarly factions, even those that were mutually hostile.

No list of his writings is available, and none of the preserved works has been published so far. His great History, ending with the year 736/1335-36, was often quoted. It was abridged and continued by later scholars. Its actual title appears to have been al-Mu' taba' (cf. al-Sakhawi, in F. Rosenthal, A History of Muslim Historiography, 414, but al-Nu'aymi, Dâris, i, 578, refers to a work entitled al-Mu'tabah [= al-Mu'tabah?] as if it were different from the History often quoted by him). The Mu'tabah is preserved in MS. Topkapsiaray, Ahmet III, ending with the year 736/1335-36, was often quoted. It was abridged and continued by later scholars. Its actual title appears to have been al-Mu' taba' (cf. al-Sakhawi, in F. Rosenthal, A History of Muslim Historiography, 414, but al-Nu'aymi, Dâris, i, 578, refers to a work entitled al-Mu'tabah [= al-Mu'tabah?] as if it were different from the History often quoted by him). The Mu'tabah is preserved in MS. Topkapsiaray, Ahmet III, 2951 (cf. al-Munadijima, in Revue de l'Institut des Manuscrits arabes, 1936, 101 ff.). His voluminous Mu'qidad, which was highly praised and often cited as a reference work for contemporary scholarly history, is not preserved. A small Mu'qidad of his early teachers is preserved in Damascus (cf. Y. al-'Ishsh, Fihrist makhtûdt Ddr al-Kutub al-Mukaddimah, 1918, 228 f.). A Mu'qidad al-Buldân wa l-Kurâ is cited by Ibn Tulûn, Luma'd (Damascus 1348), 35 and 43. A small historical work on those who participated in the battle of Badr is ascribed to al-Birzal on the strength of the handwriting of a manuscript preserved in Damascus, said to be similar to other autographs of al-Birzal in the Zâhiriyah Library (cf. al-'Ishsh,
Among his works on hadith an Arba'ın Buldānīyya is mentioned. Two selections of 'awāli al-hadīth collected from his teachers and a Thulā-thiyyat min Munadāt Ahmād b. Hanbal are preserved in Bankesic (Cat., V, 2, 104 ff., no. 462, 2, 3, and 6). A fifth work, on al-Sharī'ī, is extant in Cairo. Other works can be confidently expected to turn up in the future. However, al-Bīrūnī published less than he wrote, and the preservation of his works, therefore, remained a matter of chance. Al-Nu'ayml (Dāris, i, 113) considered it worth mention that he came across the last volume of the History in 894/1489.

**Bīsāt (see Kālā).**

**Bīsbarāy b. Harīgarbhādās Kayazī, also called Kārkarnī, Indian author who wrote in Persian; the correct pronunciation of his name in Sanskrit is Vighwarai (Rajah of the world), son of Harīgarbhādās (slave of God), of the well known family of Kayazī, which was particularly noted for its Persian culture. His surname Kārkarnī signifies “he who has ears as big as hands”. He translated into Persian, in 1065-1651-2, during the reign of Shāh Dījāhān, the Sanskrit tale Vikrama-caritram, making use of the work of his predecessors. (The Sanskrit original also bore the title Vikrama-caritram, that is to say, the life of Vikram, the Radja Vikram Aditi in whose reign commenced the Bikrami era, which has now reached the year 2015). This translation is also known under the Sanskrit title Sang-kāsan Bahitṛī (Sanskrit: Sang-kāsan-baṭṭisī, 32 tales of the lion throne), and has been translated into French by Leschallier (Le Trône enchanté, New York 1817). For the various editions of this Sanskrit text, and the Persian translations, see the works mentioned below.

**Bīsha, an oasis in western Arabia stretching about 25 miles along the banks of the wāḍī of the same name immediately north of 20° N. The headwaters of the wāḍī are east of Abhā in the highlands of 'Astr, and the channel extends c. 450 miles north to its junction with Wāḍi Ranya, whence the combined channels turn inland to Wāḍi Tahbīth and Wāḍi al-Dawāsir (see al-Dawāsīr). The tributaries Hardjāb and Tarjā, coming from the east and west respectively, empty into Wāḍi Bīsha south of the oasis of Bīsha, and Wāḍi Tabālā [see Tabālā] joins Wāḍi Bīsha in the heart of the oasis. The early poets mention Bīsha frequently, but on occasion confuse it with the wāḍī and settlement of Baysh in Tihmāt 'Astr (see A. Sprenger, Die alte Geogr. Arabiens, Bern 1875).

The oasis of Bīsha is noted for its dates, which are transported as far as Dīyānār, and the nearby Beduins raise a famous breed of white camels known as amārīk (i.e., eaters of arūk leaves). Bīsha, at the junction of routes from al-Tāf and al-Riyāḍ to Abhā, Nadārín, and all of south-western Arabia, has been an important stop on incense, pilgrimage, and invasion routes. Nimān and al-Rawshān (Yākūt's Rūshān?) are the principal towns of the oasis, the former with the most important market of the region and the latter the site of Kal'at Bīsha, where the Saudi Arabian Amir of the district is established. Al-Rawshān is divided into Rawshān 'Āl Mahdī and Rawshān Bānī Salāl. Among other towns and villages are al-Dāhw, 'Āfī al-Dābab, al-Rukaytā, al-Nakī, al-Shāhika, and al-Dīwānaya. Yākūt lists the tribes of Bīsha as Khaṭṭām, Hilāl, Suwā'a b. 'Amīr b. Ṣa'ā'a, Salūl, 'Ukayl, al-Dābak, Jīyān, and Bānī Hāşim al-Kurān. The sūfīs of al-Kahtān and Aklub (both of which stem from Khaṭṭām), Bānī Salāl, and Khaṭṭān predominated.

separate treatment of the two groups continued
under the Condominium until in 1928 a single chief
(nâzir) was appointed over the whole tribe. The recent history of the Bishân has been uneventful.

**BISHBALIK,** Bishbalk, the Sogdian (?) Panjikâth (both meaning 'Town of Five'), a town in eastern Turkestan frequently mentioned between the 2nd/8th and 7th/13th centuries (concerning the name cf. Minorsky in *Hudâd al-‘Alâm,* 271 f. and 272 f.). It was rediscovered in 1908 by Russian explorers, with the aid of information found in Chinese sources. Its position is 47 km. to the west of Kûshang (Chinese Ku-ch'êng) which was founded in the 18th century, and 10 km. north of Tsi-mu-sa, near the village of Hu-pao-tse. Its ruins (known as P'o-ch'êng-tse) have a circumference of 10 km. (B. Dolbëvë in the *Izv. Russk. Komiteeta diya izucheniya Sredneyi i Vostochnoy Azii* IX, April 1909, 65 f.; Ed. Chavannes, *Documents,* 17; *Zap. Ak. Nauk XXIII,* 1915, 77-121; Sir Aurel Stein, *Innermost Asia,* 1928, 554-59).

From the 2nd century A.D. onwards, Bishbalik was mentioned in Chinese sources as the residence of local princes. From 658 onwards, it was the centre of a Chinese administrative area (with a Chinese or Turkish governor). This was due to its position as a capital of a 'Five-Town-Area', and as one of the Chinese 'Four Garrisons'. The town is also mentioned in the Orkhon inscriptions (II, E 28; Kul-ʻur-Inscription; cf. Wilhelm Thomson in the *ZDMG* 1924, 153; A. N. Bernstein, *Social'no-ekonomicheski stroi orykhon-yeniseyskikh Tyurok VI-VIII веков* (The social and economic structure of the Orkhon and Yenisey Turks from the 6th to the 8th century), Moscow and Leningrad 1946, index. The Chinese names Kinman, and in particular, Pei-t'ing (northern court) for Bishbalik, appear from this time onwards. According to the Tâng-schu (Chavannes, *Doc.,* 96-99) the Scha-t'ou ("people of the Sandy Desert"; cf. below) lived near Bishbalik between 712 and 818. After long disputes (cf. Chavannes, *Doc.* 113 f.; Râghibghâr, *Diaan,* i, 103, 317, (ed. Brockelmann 242); Marwazi, 73; *Hudâd al-‘Alâm,* 227, 272) the town fell into the hands of the Tibetans in 791 (Chavannes, *Doc.,* 305), and later it became the residence of the Turkish Basmil princes, whose inheritance was taken over (with the title of Iduk Kut, 'Holy Majesty') by the Uigurs in 860. According to a report by a Chinese mission in the year 982 (for list of translations cf. Wittfogel, 104), the town possessed more than 50 Buddhist temples, a Buddhist monastery, Manichaean shrines and one (artificial?) lake. Some inhabitants, making use of the artificial irrigation, made their living by growing vegetables, others bred horses and did metalwork.

The only early Islamic mention of the town (in *Hudâd al-‘Alâm,* 17 a, trans. 94) dates from the same year. It is mentioned as being the residence of the ruler of the Toghuzguzz (q.v.). Concerning this, and a comparison between the Toghuzguzz and the Scha-t'ou, cf. V. Minorsky and Minorsky in *Hudâd al-‘Alâm,* 266/72, 481. The mention of it made by Idrisî, i, 491, 502, is presumably based on a different report, namely that of Tamîm b. Bahûr al-Mû'awwî (cf. bibliography).

As the northern residence of the ruler (Iduḵ Kut, Idi Kut, or Idu'ut) of the western Uigur part of the state, Bishbalk came under the Kara Khîtây (q.v.) (there is mention of a Chinese work on this by Wang-Kuo-wei in Wittfogel 615, bottom left). In 1209, the Uigrîr ruler handed the town over to the Mongols of his own free will, and took part in their campaigns. Bishbalk came in close contact with the Islamic world within the Mongol Empire, and Islam gradually penetrated into the town until the 14th century, despite the resistance offered by the Uigurs, who realised that they would thereby lose their spiritual leadership of the Mongol Empire. After the Mongol governor of Central Asia, Mas'ûd b. Mahmûd Yalavâch ('Ambassador'), had taken up his office in Bishbalk in 1252/53, the Iduḵ Kut is said to have issued a secret order in September 1258, for the murder of all Muslims in the town. By order of the Grand Khân Möngke, he was taken and executed, but his dynasty remained (Diwâynt, ii, 34 f., 88; iii, 60 f.; Rashîd al-Dîn (ed. Blochet), ii, 304 f.; Hamd Allâh Mustawfâ, *Kazwini,* *Târîkh-e Gûsidâ,* 577; B. Spuler, *Die Mongolen in Iran*², Berlin 1935, 239).

After 1260, the town appears to have enjoyed a period of independence between the empire of the Grand Khân and the Çaghatay state. It repulsed an attack from the west in 1275. At that time, Bishbalk was the starting point of the postal route from China to Central Asia (Bretschneider, Not. 208). The region of Bishbalk then apparently belonged to the state of Çaghatay. Nothing is known about the subsequent fate of the town itself. It apparently vanished at the same time as the dynasty of the Iduḵ Kut, in the 14th century. Thereafter, the Chinese used the name Pei-t'ing only as a regional designation for an area which (according to Muhammad Ḥâdîr Dughlât, *Târîkh Raghîb,* trans. E. Denison Ross, London 1895, 365) was known as Mughulistan in the 16th century, and in which Islam was now firmly established. There is no further mention of Bishbalk itself.

**AL-BISHR,** scene of a battle in eastern Syria in 73/692-3 between the Arab tribes of Sulaym and Taghib. Khâlid b. al-Walid campaigned here in 12/633 (Tabari, i, 2068, 2072-3). Yâqût describes it as a range of hills stretching from ʻUrân near Palmyra to the Euphrates, corresponding to the *Hudâd al-‘Alâm* 266/472, 481. The mention of it made by Idrisî, i, 491, 502, is presumably based on a different report, namely that of Tamîm b. Bahûr al-Mû'awwî (cf. bibliography).
An uneasy peace was broken through the Christian Taghlibi poet al-Akhtas’s satires at the Damascus court, provoking the Sulami chief al-Djahhaf b. Hukaym. The latter secured a forged diploma authorising him to collect the *sadaqah* of Taghlib and Bakr, and on this pretext left with 10,000 Sulamis. Taghlibi were surprised in their encampments at al-Musulim, provoking the Sulami chief al-Djahhaf b. Hukaym. The latter secured a forged diploma of women was a reprisal for similar behaviour and released, but his son was killed. The ripping-open because a wergild of 100,000 dirhams to be paid to Taghlib territory to escape the Caliph I.e. ii, 262, 4. The counts him among the classics His poems were collected by al-Asma *Diwdn* Abd al-Kadir on his *c* 3 *Ala* Khazini in the second half of the sixth century. al-Farazdaq, *Diwdn* (ed. Saw!) 721, mentions him *Diwdn* *Abnd?* of the Banu Sa`d, *Akil al-Murar* xv, 87; see also *Abd al-Umer* b. Umm lyas, whom Bishr addressed in at least two poems, was a grandson of Hudjr Akil al-Mur`ur (*Aghmani* xv, 87; see also *Abd al-Kadir* l.c. ii, 182). Occasionally verses of a later poet of his tribe were attributed to him (Nakd*id* 241; 245 Bevan).

**BIBLIOGRAPHY:** In addition to the works mentioned in the article: Ibn Kutyaba, *Thi*r 145-7; *Khazinat al-Adab*, ii, 262-4; Marzubani, *Mufaddaliydt*, 59; Ch. Lyall, *Mufaddaliydt*, i, 268 f.; A. Hartigan, in *MFOR*, i, 284-302; (H. W. FOCK)
in the western quarter of Bagdad, in the Darb al-Marisi (or al-Maristi), from which he took his nisba. He died in Bagdad in 218/833.

Bishr was an assiduous disciple of Abû Yûsuf in fiqh, and although he held some opinions of his own, he is counted among the followers of the Hanafî school; he also heard traditions from Hammâd b. Salama, Sufyân b. U'uyayna, and others. In theology he shared the general position of the Mûrjâ'îs, and the Muslim haeresiographers regard his followers, sometimes called al-Marisiyya, as forming one of the branches of this movement. He defined faith (imân) as the ratification (tasdik) of the judgment (imân) of the Kalâm (the Islamic creed), and that everything that is not tasdik is not imân; conversely, it follows that prostrating oneself to the sun is not in itself unbelief but an indication of disbelief. On the other hand, he considered all acts of disobedience to Allâh as grave sins (kabâwîr), but his followers (and presumably he, too) regarded it as logically impossible, in the light of Kur'ân xxi, 7 f., that Muslim sinners should be kept in hell for all eternity.

Bishr held that the Kur'ân was created, a doctrine first explicitly propounded by Dîshm b. Sâfîwân [q.v.], so that he was later vituperatively called a Dîsmî. It is also one of the basic tenets of the Mu'tazîla [q.v.], so that the Muslim haeresiographers could, at the same time, include him among these last. A distinction which he made between two kinds of Allâh's "will", led him to adopt, on the question of predestination, a position intermediate between the two extremes of the Djabriyya and the Kadariyya [q.v.], similar to that which was to become orthodox doctrine, and opposed to that of the Mu'tazîla. His main disciple, al-Nâdi'î [q.v.], whose doctrine was said to approach closely to that of his master, was in fact attacked by his Mu'tazîlî contemporaries.

Bishr is said to have been persecuted for his opinions; in particular it is said that he had to keep in hiding for 20 years during the reign of the 'Abbasîd caliph Harûn al-Rashîd. This is probably a legend, because that pillar of orthodoxy, al-Shâfi', is reported to have lived with Bishr and his mother, a pious Muslim woman, in her house during his stay in Bagdad; he is credited in the biography with the middle of the alleged period of hiding. But it is true that the traditionalists (ahl al-hadîth [q.v.]), and in particular Ahmad b. Hanbal and his followers, opposed Bishr with implacable hatred, so that he later came to be regarded by the orthodox, notwithstanding his ascetic life, as one of the arch-heretics of Islam, and scurrilous features were added to his biography.

(CARRA DE VAUX-[A. N. NADER and J. SCHAFFT])

BISHR B. MARWAN B. AL-HAKAM, Abû Marwan, an Umayyad prince, son of the Caliph, Marwan [q.v.] and of Kutayya bint Bishr (of the Banû Dîjâ'î b. Kilâb, thus a Kayyite). He took part in the battle of Mûrjî Râhît (65/684) and there killed a Kilab chief. After his father's accession to the Caliphate he followed him at the time of his expedition to Egypt, for the sources tell us that when in 65/684 Marwan had regained this province for the Umayyads, taking it from Ibn al-Zubayr [q.v.] who had seized it in Sha'bân 64/March-April 684, and had put his son, 'Abd al-'Azîz [q.v.] in charge of the Prayer and the collection of khârâjî, he left Bishr there to keep him company and to help him to forget his separation from his family.

Some time later the relation between the two brothers changed and Bishr returned probably to Syria. The chroniclers bring up his name again in connexion with the events of 71/690-91 (al-Tabari, ii, 816), the year in which the Caliph, 'Abd al-Malik appointed him governor of Kûfa. It was only in 72, probably after the end of the campaign against Mus'âb b. al-Zubayr [q.v.] in which Bishr had taken part (al-Baladhuri, Ansâb, v, 335, 338), that he took up his residence there (al-Tabari, ii, 822), and had as counsellor not only his uncle, Rawh b. Zinba[b], but also Musa b. Nusayr whom 'Abd al-Malik had asked of 'Abd al-'Azîz with this in mind (according to the Kitâb Akhâdîth al-Imâmî wa 'l-Siyâsâ, in the appendix to P. De Gayangos, The History of Moh. Dynasties in Spain, London 1840-43, L-LII). In 73/692-3, the Caliph gave him in addition to the governorship of Kûfa, that of Basra, which he had taken away after only a few months from Khalîl b. 'Abd Allâh b. Khâlid b. Asd because of his unsuccessful conduct of the war against the Khabîridjîtes; at the end of the same year or in 74, Bishr transferred himself to this city, leaving 'Amr b. Hurayth al-Mâkhrûzî as his lieutenant at Kûfa. As governor of Kûfa, Bishr sent contingents to reinforce the troops in operation against the Khabîridjîtes on 'Abd al-Malik's behalf; but although he had been appointed commander-in-chief (amir), he received an order directly from 'Abd al-Malik to give the command of the army fighting this sect to al-Muhallab [q.v.]. This he did very much against his will when he reached Basra because he had intended to appoint 'Umar b. 'Ubayd Allâh b. Ma'mar. Shocked by the Caliph's not having left the initiative to him in this matter (al-Tabari, ii, 855 sq., etc.), he advised the commander of the Kûfa troops to oppose the military action of al-Muhallab, an action which provoked the indignation of the latter (al-Tabari, ii, 856).

On his arrival at Basra, Bishr was suffering already from some hidden disease (al-Balâdhîrî, v, 171, 179, etc.) or from an infection (Ibn Khâfir, ix, 7) and he died very soon afterwards at a few years over forty, according to Ibn 'Asîkîr, in 74/693-4 (according to al-Wâkidî, apud al-Tabari, ii, 852, in 73; in 75 according to al-Dhâhibî, Ta'rikh, ms. Bodl. ii, fol. 95r and Yâ'îfî, Mirât al-Djânân, ms. Paris 1589, fol. 55r.) He was buried at Basra but a few days later it was already impossible to distinguish his grave from that of a negro who had died on the same day, which shows how little interest was taken in tombs at that time. On the news of his death, there were some defections in the army of al-Muhallab.
Bishr was a very agreeable young man, a governor who could be approached without difficulty (see the verses of Aymān b. Khuraym in Aṣāḥ, xxxi, 113), remarkably inclined to be merciful; nevertheless he executed the emissaries of Ibn al-Zubayr who, even after the death of Muṣṭafā, continued his intrigues in the city of Basra. The only criticisms levelled against his government concerned some innovations in ritual (al-Baladhūrī, v, 170, etc.), and his failure to distribute food among the people, his custom being to reserve this for his guards and the members of his court (al-Baladhūrī, v, 180).

Like many other Umayyads, Bishr enjoyed drinking wine, yet drunk and lead a merry life with his companions (al-Masʿūdī, Mursūdī, v, 254-58): he tells us of the trick played by one of his friends to rid him of the somewhat too constraining presence of his uncle, Rawḥ; the latter's removal is nevertheless explained in a different way by Ibn Kūtayba, Uṣūm, ed. Brockelmann, 207 f.). He liked to listen to music and to write poetry, and poets enjoyed his sympathy and generosity (see a long panegyric and an elegy in the Dīwān of Farazdāk, ed. Boucher, Paris 1870, 173-75, 129, transl. 521-25, 361; ed. Hell, Munich 1900, index; poems in his honour in al-Aḥtāl, Dīwān, ed. al-Ṣāḥib, 38, 58, 68, 120). Other poets too lived in his entourage or addressed verses to him: Dāwr, Kūhāyru, Fāzūl, Nūsayy, Surūkā b. Mīrād al-Bārīkī, al-ʿAṣāfī of the Banū Ṣayyān, Aymān b. Khuraym al-ʿAsadī, al-Mutawakkil, Ibrāhīm b. al-Rūh, among others.

Bishr was able to win a large return to Baghdad, Bishr was able to win a large number of converts to the Sunnī (al-waṣl), three fundamental principles of the Muʿtazilite school. These verses found their way outside the prison precincts; they were recited at meetings everywhere. Al-Raḥīm, realising that Bishr's verses had more power over the masses than his teaching before his imprisonment, freed him. Bishr dedicated a veritable dithyramb to reason. He was at once a great poet and a great rhetorician. His advice to authors and especially to poets is quoted in a celebrated page of al-Ṭāhāṣīf (al-Bayān, i, 104): "The poet must feel that secret influence of the heavens and choose elegant and beautiful terms which are simple and clear of expression".

Only a few fragments of his writings on the Muʿtazilite principles have come down to us. He stressed especially the problem of "moral responsibility" and was the first to speak of "engendered acts" (al-taḥṣīld) with a view to clarifying the nature of this responsibility and of explaining at the same time the problem of sensation. The "engendered act" (taḥṣīld) is an act prompted by a cause which is itself the effect of another cause. Thus, in the act of opening a door with a key, there is first a voluntary act, then the movement of the hand which turns the key, and lastly that of the key which turns the tongue of the lock. This last movement is an engendered act for it does not emanate directly from a voluntary decision. Thus, he says, we are responsible for acts initiated by ourselves either directly or "engendered" by our direct (voluntary) acts in measure as we are aware of all their consequences. Bishr also explains sensation as an "engendered act" through the impression which is first made on the senses; the sense then naturally translates this impression into sensation. Reason, he says, once it has reached maturity, can comprehend the great moral problems: distinguishing good from evil, even before any revelation. And thus, merit or the lack of it depends upon ourselves alone, for we have freedom of choice and action. And he adds, "there is greater merit in the man who does good by his own means than in him who is helped by divine grace". He remarked also, that voluntary decision need not necessarily be followed by implementation, even in default of impediment. We are responsible in so far as we perceive the moral value of our actions; in actions where there is no responsibility. Repeatability is valueless, he says, unless it goes with a decision not to repeat the forbidden act and not to persist in it.

As to our knowledge of the external world, it may be partial and relative, but this need not cast doubt on the value of reason. He allows that movement lies between the two moments of rest through which the mobile agent passes; and, he says, cause must always precede its effect. He defends the principle of universal determinism; the only exception he allows is that of man's freedom of motion. Finally, he considers the soul as ineluctably united to the body in man.

BISHR B. AL-WALID B. 'ABD AL-MALIK, Unayyad prince, one of the numerous sons of the Caliph al-Walid and brother of the Caliphs Yazid III and Ibrahim. His learning earned him the title of scholar (zālim) of the Banū Marwān. He led many military expeditions (certainly in 92/710-11: al-Tabari, ii, 1269 etc.). He was nomi-
nated amir of the pilgrimage by his father in 95/714. His name does not appear in the sources until the Caliph which supported Yazid b. al-Walid (the future Yazid III). He was not, however, the only member of the family to do so, since Yazid was supported by thirteen brothers.

He was governor of Kinnasrīn when Marwān b. Muḥammad, the governor of Armenia and Mesopotamia, took the field against Yazid's successor Ibrāhīm in 127/744-45. Marwān, having succeeded in winning over the garrison of the town, largely composed of Kayestes, persuaded their leader to hand over to him Bishr and his brother Masrūr, and threw them both into prison. The date of Bishr's death is not known, but as Marwān in the course of his march after the battle of 'Ayn al-Diwar took over the caliphate, it is presumed that the two captives never recovered their liberty and died in prison.

BISHR AL-HĀFĪ, full name: Abū Naṣr Bishr b. al-Mu'tamīr b. 'Aṭā b. Hilāl b. Maḥr b. 'Abd Allāh (originally Bābar) al-Hāfī. He was a Sūfī, born in Bakīrī or in Mābarsām, a village near Marw (al-Shāhīḏān) in 150/767 (or 152/769), and died in Baghdād (some sources say that he died in Marw, but this seems unlikely) in 226/840 or 227/841-42. Little is known about his early age. He is said to have belonged to some young men's association, or a gang of robbers, whilst still in Marw. He has also been described as a great friend of wine. Another tradition has it that he earned his living by making spindles. We do not know how this fits in, or to which period of his life it belongs. It is a known fact, however, that like his maternal uncle 'All b. Khashram (165/781-238/872) he was a traditionist. With the exception of 'Abd Allāh b. al-Mubārak (who came from Marw but travelled a great deal), his teachers lived in the Arabic-speaking regions; so Bishr is certain to have continued his hadith studies after he left his home, and it may be these very studies that induced him to go away. He had already made a name for himself when he reached Baghdād from 'Abbadān for the first time, for a Baghdād traditionist was anxious to meet him. Bishr is also said to have studied under Mālik b. Anas (who died in 179/795) and to have gone with him on a pilgrimage to Mecca. For chrono-
logical reasons Abū Hanīfā cannot possibly have been one of his teachers, as Hujjāwīrī and Aṭṭār assert.

It is also not clear how and when he became a Sūfī. There is no mention anywhere of a novitiate, and two completely different events are mentioned as the reasons for his conversion. According to one version a certain Išāk al-Maghāzīlī (who is, unfortunately, otherwise unknown to us) wrote a letter to him in which he asked him how he meant to earn his living if he lost his sight and his hearing and was no longer able to make spindles. According to the other version he picked up a piece of paper in the street (one report of this even says that he was drunk at the time) with the name of God on it; he perfumed it and kept it reverently, with the result that either Bishr himself, or someone else, had a dream promising the exaltation of Bishr's name. In each case, the result mentioned is Bishr's conversion to a pious way of life. Quite apart from these con-
tradictions, we do not know what form this piety took—e.g., whether it included wāhidī and we have no proof that these events actually were the be-
inning of his life as a Sūfī. From Bishr's sayings which have survived we merely see that at some point, at the latest in Baghdād, he did turn away from traditionist studies, he buried his hadith writings and concentrated on Sūfī devotions. Traditionist studies, he says, do not equip one for death, they are merely a means to gain worldly pleasure, and they impair piety. He asked his former colleagues to impose a "poor-rate" on the hadith, that is to say, to follow truly 21/2% of the pious verses which they had learnt and which they proclaimed with such professoral self-complacency. He refrained from teaching hadith for the very reason why he so greatly wished to teach them, and promised to return to them as soon as he had overcome his longing to teach them: "Beware of the hadathānā, for in the hadathānā there is embedded a particular sweetness". He admitted the science of hadith only in so far as it was pursued "for the sake of God", and quoted hadiths only in conversation, where this would fit into the general framework of a training for a pious way of life. Still, as we do not know whether his earlier traditionism might not have been practised with this same idea in mind all along, we ought perhaps not to speak of an actual breach with his past.

Bishr's Sūfī piety is based upon the acceptance of the laws of Islam and the Sunni Caliphs, but he is also said to have held the family of the Prophet in loving veneration. He was greatly respected not only by Ahmad b. Hanbal, but also by Ma'mūn (Mu'ta-
zila, Sīhā). The statement that he took Faith to mean a positive confession, a belief in its truth and man's acting according to it, as Hujjāwīrī puts it, is, when formulated in this way, hardly true, although it is justifiable with regard to his practice. The decisive factor for Bishr was the deed itself. As an absolute minimum in this respect, he demanded that man should at least not sin, and to accomplish this he advised contemplation of God's greatness—before which he himself trembled, despite his own ascetic life, up to the very point of death. Before
the choice between God or the world, he made his choice unreservedly in favour of God, and he despised all forms of worldly ambition and selfishness. He preferred poverty, which was to be born with patience and charity, and it is said of him that if one day he met a man suffering from cold, and could not help him in any other way, he unclothed himself to show his sympathy and to give an example; he died in a borrowed shirt because he had given his own away to a poor man. He spoke against the avaricious, the very sight of whom "hardens the heart"; and he advised a man who asked for God’s help to start off on a pilgrimage to Mecca, to give his money instead to an orphan or to a poor man, for the joy caused thereby was worth a hundred times more than any pilgrimage. By saying this he hardly meant that the one pilgrimage to Mecca, which the law prescribes, could be replaced by some social act, as some other Sâfîs have taught, but must have referred to some additional pilgrimage. Tawûs b. Kaysân already (who died in 105/724) is said to have refrained from going on a pilgrimage because he chose to stay with a sick friend instead (Hilyat al-Awsiyâd, 4, 10; cf. Meier, Zwei islamische Lehrerschungen bei Tolsoji? in Asiatische Studien, 1958).

And Bishr called pilgrimages the holy war of women, but, unlike for instance Džâfar al-Ṣâdik (al-Kâdd al-Nu’mân: Da’â’im al-Islâm, 1, 346-47), he put the giving of alms above both pilgrimage and the holy war—because alms could be given in secret, without other people getting to know of it. The very wish to have one’s good deeds known by other people is, for Bishr, an example of worldly mindedness, and in this he sees an element capable of destroying even the good deeds of man. He condemned the wish to be well thought of by one’s fellow men to the extent of advising one against mixing with them at all—even if only to give testimony and lead the prayers. Here his teachings come close to the Malikatümiyya: “Do not give anything merely in order to avoid the censure of others!”; “Hide your good deeds as well as your evil ones”. He confesses that he himself still attaches a certain importance to the effect he makes on others, and to his appearance as a pious man, but he wages an unrelenting war against this tendency (isâdîyût)—in himself as well as in others. He only recognises those who wear patched cloaks (murâkâbât) as sharers of his views, when one of them has told him of his resolution to live up to this symbol of dedication to God’s service by an active furtherance of religion. He himself refrained, on one occasion, from accepting dates in the dark at the back of a shop, in order not to be different in secret from what he was generally considered to be. His abstemiousness (murâ) went beyond mere abstention from dubious things by putting a limit to the unrestrained enjoyment of what was permitted: “what is permitted”, he says, “does not tolerate immoderation (isârîf)”. Of everything he ate a little less than his conscience would have permitted, thereby creating the ‘Tabu-zone’ which had already been recommended in the Jewish Pirâté Abîth, and which was also observed by numerous other Islamic ascetics. Destitute, he often lived on bread alone, and sometimes he was starving. Where the question of faith in God’s providence (lauwâkîhâl) arose, he distinguished three types of the poor: (1) those who neither beg nor accept anything, yet receive everything they ask for of God; (2) those who do not beg, but accept what they are given; (3) those who hold out for as long as they can, but do then beg (Suâlâmî: Tabâsîyâ, 47; ‘Аtâr: Tadékhra, 1, 110), describing those who belong to the middle group as people trusting in the providence of God, however, another place (Tadékhra, 1, 110, 24-25) in the same context expresses this confidence as being the resolution not to accept anything from any man; whilst in a third place lauwaqîhû appears to be comparable with manual work provided the deed be done under the will of God (Hilya, 8, 351)—but the explanation of that oracular definition iṣârîf bîldâ suhâbân wa suhâbân bîldâ iṣârîf does not seem to me to be beyond all doubt. Admittedly, Bishr is said to have begged only from Sârî al-Sakâti, knowing that this man would rejoice in the loss of any worldly possessions; but some stories suggest that he lived largely on the earnings of his sister Mukhkâ, who looked after him and lived by spinning. (Bishr had three sisters who are all said to have lived in Bagdad). The question of begging links up with the one concerning ‘giving and taking’, which played a great part in Sûfism, especially later on (cf. Meier, Die Vida des Scheich Abû Ishâq al-Kâzarûnî, in Bibliotheca Islâmica, 14, 1948, Introduction 57-61). In spite of taking a great interest in the lot of the poor, Bishr did not—unlike Kâzarûnî for example—function as their spokesman and mediator, but rather withdrew into himself. He refrains from admonishing princes, he does not even drink of the water for which a prince has dug the channel. As a consolation when the cost of living is high he advises contemplating death. He knows that there is no way of satisfying mankind, and regards his own time (on a well-known pattern) as particularly far removed from the ideal of contentment: “Even though a cap should fall from heaven on to somebody’s head, that man would not want it”; nor, like Muâsîbî, does he have much to say in his days in favour of the readers of the Qur’ân: “Rather a noble robber than a base-minded reader of the Qur’ân”. He finds true piety restricted to the very few: “In these days, there are more dead within than without the walls”. A Sûfi is one who stands before his God with a pure (ṣâfî) heart, and perfect is only he whom even his enemies no longer fear; but in Bishr’s own days not even friends, he says, could trust each other. The opposition which a pious man has to overcome lies in his inclination (shahâwâdî); only those who have erected an iron wall against these inclinations, says Bishr, can feel the sweetness of the service of God. He advises silence to those who derive pleasure from speaking, speech to those who enjoy being silent. He declines teaching badîhâs, because he does not wish to give in to a desire to do so; he eats no aubergines in order to fight his craving for them, and no fruit in order not to satisfy the fruit’s own longing. He does not, however, advocate the repression of sexual desire, and does not even object to a harem of 4 women—though he himself remained unmarried.

In spite of the fact that Bishr puts the deed before knowledge, he is considered both knowledgeable and intelligent. This does not refer to his theological knowledge, but also to his ability to experience and expound religious feelings and to his pious way of life: “A wise man is not one who merely knows good and evil, but he who both does the former and refrains from doing the latter”; “First to know, then to act, then really to know”. Ahmad b. Hanbal is said to have claimed for himself greater theological knowledge, but to have referred to Bishr for knowledge concerning the reality of things, the higher facts (hakâtâbî). Without question, though only a few dicta and some verses in the style of the sâdîqîyût...
have survived, Bishr played his part through his word in expanding the teaching of the mystical shaping of man in Islam. Some sayings of his, however, belong to an earlier tradition which he simply passed on—one of his frequently quoted Sufi teachings is Fuṣṭal b. Ḥaydā. The men who learnt from him are recognisable from the ismāds of his dicta.

With regard to the origin of Bishr's cognomen "the barefooted" (ḥāfī), Ibn Ḥallikān tells the following story: Bishr once asked a cobbler for a new strap for one of his sandals, but the cobbler called this a nuisance, whereupon Bishr threw down both his sandals and henceforth walked barefoot. Much speaks in favour of this report, even if the explanation is not clear in every detail. Did Bishr fly into a rage at the cobbler's answer, and then, being a pious man, did he draw the consequences? Or did he, blaming only himself, soberly come to the decision never to inconvenience a cobbler again? Later referring to Sura LXXI, 19 "And God made the earth your carpet", he said that he did not step onto a king's carpet wearing shoes. As a further reminder he also says that at the "time when the pact was made" they too were barefoot. This probably refers to the pact of obedience which human beings are said to have made with God before their appearance on God's earth (Sura VII, 172: a-lasū bi-rabbikum). Such justifications belong to the symbolic associations which Sufis later attached to the various parts and colours of their clothes (cf. Meier, Ein Knigge für Schwärmer, in RSO 32, 1957, 485-524). The statement made by Ḥudūjwīrī and repeated by ʿAṭṭār that Bishr went barefoot because he was so deeply moved in contemplation of God, is hard to understand—and, together with the explanations given by Ḥudūjwīrī and ʿAṭṭār, mere theory. Bishr is said to have called himself "the barefooted" and to have been called to account for this by a girl who said "All you have to do is to buy a pair of sandals for two dinār, but then you would never have your beautiful name".

Al-Hafi is also the name of the dervish in Lessing's Nathan der Weise. Although Reiske's Abiljadede Annales Moslemici, i, Leipzig 1754, where our Sūfī appears on page 193, vulgo Beschir al-Hafi [sic nudis!] dicit, had already appeared by the time Lessing's play was written, it can hardly be regarded as its source. Lessing is more likely to have sought Reiske's advice personally, or to have derived the name from d'Herbelot (cf. Baschar al-Hafi and Haiji).

BISKRA, town and oasis of the Zibān in the south-east of Algeria and on the northern fringe of the Sahara. It is situated at an altitude of between 100-120 metres, on the alluvial cone and the west bank of the Oued Biskra, at the mouth of a wide depression which extends from the Awrās massif to the western Saharan peaks of the Atlas Mountains. This has always been a route much used by nomads and conquering shepherds. The blue sky, seldom streaked with clouds, its mild winter climate (mean temperature for January 11.2° = 52° F.) make of it a winter resort (it has numerous hotels); but its summer climate is torrid (33.3° = 92° F. in July) and favourable to the ripening of dates. Rains are fairly rare (156 mm. = 6.14 ins. per year) and, above all, irregular. The palm grove which covers an area of 1300 hectares, numbers more than 150,000 palm trees and thousands of fruit trees; it is irrigated by the waters of canalised springs. In the cold season, the surplus water makes it possible to irrigate vast fields of wheat and barley at the southern end of the oasis, where the harvest begins in April. The European town, which has grown into the administrative, commercial and tourist centre, is laid out on a grid plan; it was built upstream from the palm-grove, near a fort. The Muslim cultivators are dispersed in villages, in houses of brickude. These are mainly to the south, surrounding the ruins of an ancient Turkish fortress. These villages are: Msid, Bab al-Dorb, Ras al-Guerria, Sidi Barkat, Medjeniche, and Guedda; on the perimeter, a little apart, are Beni Mora, al-Kora, Filali and Aliya. Biskra, which is the chief centre of the Ziban group of oases, is a township of 54,500 inhabitants in all, among which are a few hundred Europeans. It is served by the railway which runs between Touggourt and Constantine, and by the pipeline, which, since 1958, has carried the petrol of Hassi-Messoud to the port of Philippeville, and will soon extend to Bougie.
In the 8th/14th century, the Banū Muznī committed more than one act of disloyalty to the Ḥafsids for the benefit of the rulers of Bougie, Tlemcen or Fes. Then, in 904/1402, the king Abu Fāris re-established the autonomy of Tunis over Biskra; he led away the last of the Banū Muznī as his captive and replaced him, as elsewhere, by a Kāʿid of his own entourage.

With the decline of the Ḥafsids at the end of the 9th/15th century, Biskra and the Zāb became the fief of the nomad Arabs, the Dawawida. The town was still "densely populated" but the people were poor, wrote Leo Africanus in the middle of the 16th century (trans. Épaulard, 440). This was the point at which the Turks, following the two expeditions of Ḥasan Aḡā in 949/1542 and Saλāḥ Raḥs in 939/1532 took over to establish a garrison and construct a fort. In practice, power was in the hands of the chiefs of the BuʿUkkāz family, who were given the title of Shaykh al-ʿArab. In the eighteenth century, the Bey Saλāḥ of Constantine, finding them too powerful, set up a rival family, that of Ben Ganah. Biskra suffered from this rivalry and from the abuses of the Turks: its inhabitants gradually abandoned the town to put a greater distance between themselves and the kašba and dispersed to small villages spanning the oasis.

After the French landing at Algiers (1830), the rivalry continued. Farḥāt b. Saʿīd, representative of the BuʿUkkāz family, finally appealed to ʿAbd al Kāḍīr, but the Ben Ganah family joined up with France in 1838, following the capture of Constantine. Biskra was occupied by the Duke of Aumale in 1844, in the following year a permanent garrison was established and a fort built on the site of the old kašba. The Ben Ganah retained their position as the most influential family and held most of the key appointments in the region. They have recently become reconciled with the BuʿUkkāz family (1938) and from the abuses of the Turks: its inhabitants were able to promise not to attack the clan of Saλāḥ al-Dīn and construct a fort. In practice, power was in the hands of the Shaybānī and the Sayyids, and the most influential family and held most of the key appointments in the region. They have recently been reconciled with the BuʿUkkāz family (1938) and still hold the power in the town.

Biskra was occupied by the Duke of Aumale in 1844, in the following year a permanent garrison was established and a fort built on the site of the old kašba. by the Persian 'āmil at 'Ayn Tamr, ended with the defeat of the attackers and with the escape of Bistām (Anšâb, 1004 b). Bistām fought his last battle at Nakā al-Hasan. He was killed by a half-witted Dabbl, ʾĀsim b. Khâlifâ, who is said to have boasted of his deed at the court of ʿUthmān. The date of his death may be fixed at circa 615 A.D.

Very little is known about the posterity of Bistām. His grand-daughter Ḥadârâ, the daughter of his son Ẓâlîk was about to marry al-Fârâzdâk, but died before the appointed date.

Bistām is said to have been a Christian. He was the sayyid of his tribe; when the news of his death reached his tribe they pulled down their tents as an expression of their sorrow. Many elegies were composed on his death, and his person was glorified as the ideal of Bedouin courage and bravery. But in the times of al-Ǧâhîz, in the urban mixed society of the towns of ʿIrāq, his glory faded away, and the common people preferred to listen to the story of 'Antâra (al-Baydân, iii, 34) which came closer to their social equalitarian tendencies (cf. El, s.v. ʿAntâra, R. Blachère).

Bistām b. Kays, Kâfir b. Ahmad al-Ḥarrâf, was born in Antioch and appears to have witnessed the sack of Aleppo, by Tûrîq, in 803/1400. He studied in Cairo and went to Bursa, then the Ottoman capital and imperial residence. There he gained the favour of Sultan Murâd II, a patron of learning, to whom several of his works are dedicated; there he died in 858/1454.

He was a mystic, belonging, as his name indicates, to the Ḥurâfî (q.v.) order of dervishes, who attributed a mystical significance to the letters of the alphabet and to combinations of these (cf. his Kashîf Asrâr al-Ḥurâfî; his Šams al-ʿĀlî fi ʿIlm al-Ḥurâfî, written in 826/1423). Among works of this type is also his Muḥâlîf al-Ǧâlîr al-Ḏâmî. He wrote a number of Sûfî works, perhaps the best-known being Mandâkid al-Tarâṣûsî fi Muḥâbât al-Tarâṣûsî, and also wrote on history and geography, the most important work being the encyclopaedia entitled al-Fawâid al-Miskîyya fi l-Fawâid al-Makhtûya.

Bistî [see Shika].

Bisútûn, (Bisti’un of the Arabic geographers, Bistûn in present local parlance), a mountain ca. 30 km. E. of Kirmânsâh on the main road from Baghdâd to Hamadân.

The name is found in Greek sources (Diodorus 2.13 and Isidore of Charax) to βασιλείαν ὅριος, and in early Islamic authors (as al-Khwârizmî and Ḥamza al-ʾIṣfâhânî) where we find the archaic form Baghistân, Old Persian* bâgastânâ “place of the gods”, (or one divinity in particular). Later Islamic authors have the form Bistiun (Bistûn) which in modern times became Bisútûn (Bistûn). The site is mentioned many times in Arabic literature since it lay on the main road from ʿIrāq to Khurâsân.

High above the road is the famous bas-relief of Darius the Great with cuneiform inscriptions in three languages, Old Persian, Akkadian, and Elamite. Beside the road below was the relief of the Parthian king Gotarzes, unfortunately now almost obliterated by a modern New Persian inscription.

Bisûtûn was regarded as a world wonder by the Muslims. In the books of those authors who follow Abû Zayd al-Balâqî appears a short description of the sculptures which was fanciful since the Bisûtûn sculptures are confused with those of nearby Tâk-i Bustûn (considered Khursâw II Parwiz with his horse, a work of ʿKaṭṣûs b. Sînimmar). Ibn Ḥâkîm gives the curious explanation of the Darius relief with his captives as a teacher and pupils. Most Islamic authors thought the sculptures depicted Shirîn and Khursâw II.

The trilingual inscription of Darius provided the key to the decipherment of all cuneiform inscriptions.

(E. Herzfeld-R. N. Frye)

BITIK, BITIKCÎ, Turkish words derived from the verb biti- “to write”. A deverbal-noun bitîg “written document book” is found in the Orkhon inscriptions and in the Turkish texts of Turfan. Bistîk, is a nomen agentis in -ti signifying “scribe, secretary”. It is first found in Qudadyu bitîg under the form bitîgî. The forms with a final surd (bitik, bitikci) are well attested in middle Turkish notably in Çağatay and Coman. The verb bitîg and its derivatives have almost disappeared from modern dialects. Khakas has preserved pitik, bitik, "written, document" as well as bitîtä “cultured, literate” and in Tuvin we have for example bitik “official document”.

The etymology of biti is unknown. The much quoted derivation from the Chinese ifu (> *piš) "writing brush" must be treated with caution. Comparison with Indo-European forms, such as Khotanese pišaka “written, document”, Sanskrit pišaka “collection of canonical books”, or Greek πίπτοσιν “letter”, is tempting but unsubstantiated by the phonetic history of these words.

In written Mongol the verb “to write” is biti-, a form which corresponds with the Turkish biti-. The deverbal noun biti- “written document, writing, letter, missive” occurs from the time of the Secret History of the Mongols and a nomen agentis bitiçî “scribe, secretary, copyist” is found in the Mongol administrative documents of the Il-khans. Mean-
while in Mongol-administered Persia the Turkish form bitik" seems to have been preferred to the Mongol form. One may see in this an indication of Uighur preponderance in the administration of the Mongol Empire. The words of literary Mongol are clearly observable in modern dialects. For example: modern Khalkha bitieg and biteli, Buryat bosog and bote, Kalmuk, bitieg and biteli, Ordos bitikh and biteli.

The most ancient Tunguz form is Ju-chen *biegi(i) "book". Mandju bitike "written document, as the book, document, letter" must be a loan-word as the derivation cannot be explained by the facts of Mandju. On the other hand bitikess "scribe, secretary" is a regular Mandju nomen agentis. In Evenki bichi "to write" and bitiga "written document" are borrowed from the Mongol, while the Oroch bitikh, Oltcha bito "written document, letter", is directly connected with Mandju forms.

It is reasonable to conclude that the Turkish words implanted in Mongol by Uighur scribes, followed the Mongol conquest which enabled them to become technical administrative terms. — These found ready use in the highly developed states of the Ju-chen and the Mandju. See further berat.

BITILIS [see BIDLIS].

BITOLJA [see MANASTIR].

BITRAWSH, in Spanish Pedroche, a little place in the administrative district of Pozoblanco, 60 kms. north of Cordoba, on the Cordoba-Toledo road, and the same distance from Dar al-Askar now El Vacar). According to Idrisi, it was a heavily populated fortified town with high walls; situated in the region of Fañ al-Ballut of which Ghalfik (now Belalcasar) was the capital, it was the seat of a provincial judge. Its inhabitants like those of Ghalfik had won renown for their bravery in repulsing the attacks of the Christians. Its mountains and plains were, and to a great extent still are, covered with a variety of oak trees distinguished by the quality of their acorns, which the inhabitants cultivated with great care, and which in years of famine served them as food, for as al-Razi affirms, they were the best in all Spain. Abü Haç Úmar al-Ballut, who came originally from Pedroches, occupied Crete with the survivors of the "Battle of the Suburb" (al-rabad) and there founded a dynasty which lasted until 530/941. The Berbers settled in the district of Los Pedroches took part, under an Andalusian mystic called Abü Ali al-Sarrad, in a rising against the amir Abû Alá Allâh which ended in the rout and death of their chief in front of the walls of Zamora (268/901). Of its history during the Almoravid and Almohad periods, we only know that at the beginning of the year 550/1155, the governor of Cordova, Abû Zayd Abû al-Rahman b. Igit, made a sortie with Almohad troops against the forth of Pedroches and those of the Fañ al-Ballut region of which Alfonso VII had just taken possession in the course of a rapid invasion which had also enabled him to take Andujar. Ibn Igit routed the Count, the lord of Pedroche, whom Alfonso VII had left there as governor, and, in the course of his assault on the fort, took him prisoner and sent him to Marrakech.

BITRÎK, Arabised form of Latin Patricius. The patriciatus dignitas, was instituted by the Emperor Constantine (A.D. 306-337), an honorary dignity, not connected with any office, and conferred for exceptional services to the State.

I.—It is certain that no Arabs in the service of Rome were endowed with the patriciate before the Ghassânids [q.v.] and no Ghassânid before al-Ḫârîth b. Ḫabala, who was honoured with the dignity ca. 540 A.D., as was also his son and successor al-Munâdhir ca. 570 A.D. The assumption of this high Roman honour by the two Ghassânid dynasts is the most telling indication of their place and importance in the Roman hierarchy. Al-Ḫârîth and al-Munâdhir are the only figures in the history of the Arabs before Islam whose patriciate can be established with certainty; there is no positive evidence in the sources that the Romans conferred it again on a Ghassânid after al-Munâdhir.

II.—As the Muslim conquests in the seventh century changed the status and rôle of the Arabs in their relation to the Romans from subjects and "allies" to conquerors, the patriciate, which in the pre-Islamic period had been greatly coveted by Arab princes as a symbol of their Roman connexions, naturally ceased to be assumed by them. Instead, it survived as a term in their literature. Almost a hapax legomenon in pre-Islamic poetry, bitîrîk acquired three broken plurals and found its way into the literature of the Muslim period. It was woven into the texture of Arabic poetry by al-Mutanabbi and Abû Firsâ and was frequently mentioned by the historians and the geographers. Indeed, in the military annals of Arab-Byzantine relations it became the regular term for a Byzantine commander. Although other terms occur, like duns, paradoxically enough it was bitîrîk, a non-military term, which received the widest vogue.

III.—The frequent occurrence of bitîrîk in Arabic authors was, however, attended by confusions and inaccuracies. The patriciate was conceived as though it were (a) an office (b) hereditary (c) applicable to "allies" to conquerors, the patriciate, which in the military annals of Arab-Byzantine relations it became the regular term for a Byzantine commander. Although other terms occur, like...

AL-BITRJJI, NÚR AL-DÍN ABD AL-SÁ`Á, called Alpetragius by mediaeval European authors, a Spanish-Arab astronomer, the disciple and friend of Ibn Tufayl (about 600/1200). His astronomical theory, the origins of which must be sought in the return to Aristotelianism initiated by Ibn Badajja and other Arab philosophers of Spain like Ibn Tufayl and the astronomer Djäbir b. Afhâb, involved the reintroduction of the idea of impetus roughly formulated by Simplicius (6th century A.D.), the abandonment of epicycles and excentrics, and the view that the celestial spheres revolve around different axes, thus producing a spiral movement (haraka laulabiyya). The work in which he sets forth his principles, entitled Kâibil fi ‘l-Hâyâ, was translated by Michael Scot; Carmody published in 1953, at Berkeley, a critical edition of this translation compared with the Arabic text. In 657/1259, Moshe ibn Tibbon translated the work from Arabic into Hebrew, and in 934/1528, Kahonimos ben David made a Latin translation, based on the Hebrew version, which was printed at Venice in 1531, at the same time as the Treaite sur la sphere de Sacrobosco.

BIYÁBA/NÁK, an area in the central desert of Iran (Dasht-i Kawir), with some twelve oases. The area is included within E. Long. (Greenw.) 54° 15' and 55° 15' and N. Lat. 33° 5' and 34° 10', roughly 70 miles by 90 miles. The date palm and other crops, have enabled the oases to flourish isolated from the rest of Iran. The word is probably a diminutive meaning “little desert”, but the name does not appear before the 16th century (Tavernier).

We find no references to the area in pre-Islamic times, though local tradition claims that it was a place of banishment under the Sasanids, and the existence of site names such as Atashkada (6 km. N of Karmah, 43 farsakhs from Na'In, and says that the area was infested formerly with Kufidjan (Kufs), but in his time (5th/11th century). Amir Gilani of Tabbas had rid the region of them. Later the area suffered from Balúti raids until the 1920s. Apparently Arab tribesmen from Khuzistán raided this area as well, for European travellers in the last century report Arabs living here and local tradition tells of a tribe called the Ili Basíri which terrorised the area under the Kâddar. At present there are perhaps 10,000 people living in the oases, the nine principal oases being Djanak, Farrúkhi, Djarmak, Urdib, Iradir, Mîhrâjân, Bayâzâh, Çupánan, and the administrative centre Khûr. Dialects are spoken in all of the oases save Djanak where Persian is spoken. The date palm provides the principal livelihood for the people of the oases.

BLIDA [see BULAYDA].

BOABBIDIL [see NASRIDS].

BOBASTRO [see BARASHTURU].

BODRUM, a small town situated on the west coast of Asia Minor, opposite the island of Istanbou (Kos). It stands near the site of the ancient Halicarnassus in Caria. When the Turks overran western Asia Minor in the years around 1300, this region came under the rule of the Beys of Menteshe [867–1879]. The Ottomans seized the emirate of Menteshe in 792/1390, lost it after their defeat in battle against Timur Lang at Ankara in 804/1402 and did not recover full and direct possession of Menteshe until 829/1425–1426. This second and definitive annexation of the emirate was not, however, destined to include the old Halicarnassus, for the Knights of St John at Rhodes, under their Grand Master Philip de Naille (1396–1421), had meanwhile occupied the site of the ancient town, and had built close at hand a fortress which received the name of "Castellum Sancti Petri" (Gr. Πετρού). It has been suggested that the name Bodrum derives either from the vault-like arcades amongst the ruins of Halicarnassus (cf. the Turkish bodrum: a subterranean vault, a cellar) or from the Latin name for the new fortress ("Sanctum Petrum").

The Venetian admiral Pietro Mocenigo, during the course of his sea campaigns in the eastern Mediterranean (1471–1474), ravaged the Ottoman-held hinterland of Bodrum. In 885/1480, the Ottomans, returning to Istanbul from their unsuccessful siege of Rhodes in that year, attempted, but without avail, to take the Castle of St Peter. Bodrum came under Ottoman rule only in 929/1522, when the Knights of St John, after a long and desperate resistance, surrendered Rhodes, together with its dependent possessions, to Sultan Sulayman Kanuni. Ewliya Celebí mentions that a naval engagement occurred in the harbour of Bodrum during the Ottoman-Venetian war of 1053–1060/1645–1669. Bodrum suffered bombardment from the Russian squadron operating in the eastern Mediterranean in the course of the Ottoman-Russian war of 1182–1188/1768–1774. It was again bombarded during the
Great War of 1914-1918, the fortress on this latter occasion receiving considerable damage, which was, however, repaired when Italian forces occupied the town in 1919-1920. Bodrum, under Ottoman rule, belonged to the sandjak of Menteşe in the eyalet of Anadolu. It had later the status of a badā‘, when this sandjak was subordinated, in 1864, to the newly formed vilayet of Aydınlı (Smyrna). The town is now included in the present Turkish province of Muğla and had in 1950 a population of about 4,800 inhabitants.

BÖGHÂ AL-KABIR [see BÖGHÂ AL-KABIR].
BÖGHÂ AL-SHARABI [see BÖGHÂ AL-SHARABI].
BÖGHÂZ [see BÖGHÂZ-IÇI].

BÖGHÂZ-IÇI (Boğazici) (“interior of the strait”) is the expression used in Turkish to denote the Bosphorus, and especially the shores, waters, bays and promontories which constitute its middle section. The name Bosphorus (Gr. βόσπορος, Lat. Bosphorus, Bosphorus) derives from a word of Thracian origin (cf. Paulus-Wissowa). This narrow channel, the Thracian Bosphorus (so-called in order to distinguish it from the Cimmerian Bosphorus, i.e., the strait of Kertch between the Sea of Azov and the Black Sea) unites the Sea of Marmara (the ancient Propontis, Marmara Denizi in Turkish) and the Black Sea (the Pontus Euxinus of classical times, the Kara Deniz of the Turks). The Byzantines often referred to it simply as ἔκτροχον, “its strait”, while, to the Latins at the time of the Crusades, it was known as the “brachium S. Georgii” (cf. Tomaschek). It is mentioned under a number of different names in the Turkish sources, e.g., Kahlîjî-bahr-i siyâh, Kahlîjî-ı Kustâniyye, Kustâniyye boghaz, Istanbul boghaz, etc. This latter name means “throat” or “gullet” in Turkish, but has in geographical names the sense of “defile”, “strait” (cf., e.g., Külêk Boghaz, the Cilician Gates, or Çanak-kale Boghaz, the Dardanelles).

The Bosphorus has a mean length of about 30 km. and a width which varies from approximately 700 to about 3550 metres. A strong current (3-5 km. per hour) flows down the centre of the channel from the Black Sea to the Sea of Marmara, but a countercurrent runs in the opposite direction below the surface and along the shores. The more notable localities which border the strait can be enumerated as follows (the names are given in the modern Turkish form): on the European side, in order from south to north, are to be found Tophâne (the Byzantine Argyropolis), Beşiktaş (Byz. Diplokition), Ortaköy (Byz. Hagies Phokas), Ayvansaray (Byz. Anaplous), Bebek (Byz. Chalai), Rumeli-Hisarı (Byz. Phoneus), Istinye (Byz. Sosthenion), Yeni-Köy (Byz. Neapolis), Tarabya (Byz. Therapeia), Büyük-Dere (Byz. Kalos Agros) and Rumeli-Kavâği; on the Asiatic side, in sequence from north to south, are located Anadolu-Kavâği (Byz. Hieron), Beykoz, Paşa-Bahçe, Çubuklu (Byz. Ireneaeon), Kanlica, Anadolu-Hisari, Kandilli (Byz. Brochthol, Çengel-Köyü, Beylerbeyi, Kuzuncuk (Byz. Chrysokephalos) and Uskudar (Scutari; Byz. Skoutarion, an imperial palace in Chrysopolis). The Bosphorus proper ended, according to the view held in ancient times, at the present Rumeli-Kavâği and Anadolu-Kavâği, the waters beyond this line, towards the north, being considered as a part of the Black Sea.

The Byzantines fortified the northern end of the Bosphorus in the region of Rumeli-Kavâği and Anadolu-Kavâği, where the strait narrows to a width of about 1000 metres. Traces of a Byzantine fortress can still be discerned to the north of Rumeli-Kavâği. There is in fact a tradition that the Ottoman Sultan Mehmed II demolished this ancient fort (“Eski Kal’e”), the material thus acquired being used in the construction of Rumeli-Hisari in 856/1452 (cf. Gabriel, 77 and 81). A Byzantine fortress also existed at Anadolu-Kavâği. It was known to the Ottomans as Voros (Yeros) Kal’esi (cf. Byz. Hieron) or Dinevț Kal’esi. This latter name arose from the fact that the Genoese, in 1350, had taken over from the Byzantines control of the defences in the northern zone of the Bosphorus.

It was only with the rise and growth of the Ottoman empire in the 14th-15th centuries that the lands bordering on the Bosphorus came under Muslim rule. The Ottoman Sultan Bayazid I (791-805/1389-1403) built on the Asiatic shore of the strait a strong fortress called Anadolu-Hisâr (also known as Güzeldje Hisar), to which Sultan Mehmed II made various additions and improvements in 856/1452. On the European shore, opposite Anadolu-Hisâr and at the site which the Byzantines called Phoneus (Φωνέως, also Φωνάς and Φωνάζων), Mehmed II constructed, in this same year, the fortress of Rumeli-Hisâr (often called Boghaz-Kesen, i.e., “which cuts the throat” or “which cuts the strait”). The Sultan furnished both these fortresses with artillery capable of firing across the Bosphorus, here compressed to its narrowest width (about 700 metres). After the fall of Constantinople in 857/1453...
the Black Sea became in effect an Ottoman lake. Mehemed II brought to an end the former Genoese imperium over the Black Sea in 866/1461 and 882/1475. Moreover, in this latter year, the Khan of the Crimea was reduced to the status of an Ottoman vassal. Rumeli-Hisari and Anadolu-Hisari, together with what remained of the old Byzantine defences at the northern end of the Bosphorus, now lost their earlier importance.

After a long interval of calm, danger threatened from the north, when Cossack sea-raiders plundered Sinope on the south shore of the Black Sea in 1471, 1614 and ten years later, in 1633/1644, carried fire and sword into the Bosphorus itself, ravaging Sar-Yer, Büyüik-Dere, Tarabya and Yeni-Köy on the European shore of the strait. To ward off this menace, the Ottomans, in the reign of Sultan Murad IV (1032-1049/1623-1640), built two new fortresses, one in the region of Rumeli-Kavağ, the other near Anadolu-Kavağ. These forts (not to be confused with the former Byzantine defences in this section of the Bosphorus) are described in Ewliya Celebi (i, 461) as the kal'-i külda al-bahr, “the forts which are the lock of the sea” (bahr-i siyah, the Kara Deniz or Black Sea). No trace of them now remains, both having been demolished in the course of the 19th century (Gabriel, 82).

During their unsuccessful war against Russia in 1162-1168/1768-1774 the Ottomans began to recognize the defences of the Bosphorus. New fortifications arose, in 1167/1773-1774, at Kilyos (Kal'-e Baghdađdžik) on the European, and at Irva (Kal'-e Revândjik) on the Asiatic shore of the Black Sea, just outside the strait itself, and also at Fener-i Rumeli and Fener-i Anadolu on the northern exit from the strait. Additional forts soon made their appearance at Garipce and Büyük-Liman on the European shore of the strait. Additional forts (not to be confused with what remained of the old Byzantine defences in this section of the Bosphorus) are described in Ewliya Celebi (i, 461) as the kal'-i külda al-bahr, “the forts which are the lock of the sea” (bahr-i siyah, the Kara Deniz or Black Sea). No trace of them now remains, both having been demolished in the course of the 19th century (Gabriel, 82).

During their unsuccessful war against Russia in 1162-1168/1768-1774 the Ottomans began to recognize the defences of the Bosphorus. New fortifications arose, in 1167/1773-1774, at Kilyos (Kal'-e Baghdađdžik) on the European, and at Irva (Kal'-e Revândjik) on the Asiatic shore of the Black Sea, just outside the strait itself, and also at Fener-i Rumeli and Fener-i Anadolu on the northern exit from the strait. Additional forts soon made their appearance at Garipce and Büyük-Liman on the European, and at Poyraz-Limau on the Asiatic side of the Bosphorus above Rumeli-Kavağ and Anadolu-Kavağ. This defence system received the name of “Kila'-i Seba” (the seven fortresses). A sustained effort was made during the reign of Sultan Selim III (1203-1222/1789-1807) to extend the defences of the Bosphorus. At the same time the older fortifications situated within the Bosphorus proper, southward from Rumeli-Kavağ and Anadolu-Kavağ in the direction of the Marmara Sea, underwent a process of repair and modernisation. These years witnessed, however, the emergence, in its modern form, of the Eastern Question. The control and defence of the Straits, i.e., of the Dardanelles as well as of the Bosphorus, was now to become a matter of prime concern, not to the Ottomans alone, but also to the Great Powers of Europe, who, during the 19th-20th centuries, imposed on the Straits a much debated and often altered, system of international control.

BOGHAZ KESEN [see RUMELI HISAR]

BOGDAN, originally Boghdân-îlî or Boghdân-wilâyeti (the land of Boghdân), which formed the principality of Moldavia, so called after Boghdân who in 760/1359 founded a principality between the Easternflanks of the Carpathians and the Dniester (Turia). The name Boghdân-îlî appears in the külm of Mehemed II dated 859/1455 (Kraelitz, Osm. Urk. Table I). The name Kara-Boghdan is found in the letter of Iminek dated 881/1476 (Belleten, no. 3, 4, 644) and in the Ottoman chronicles generally.

The principality suffered its first raid (akhîn) by the Ottomans in 823/1420 (unsuccessful siege of Ak-Kırımân). In 831/1428 the Khan of the Golden Horde, Ulugh Muhammed, proposed to Murad II that they should act in concert to destroy the Vlach infidels dwelling between them (cf. Kurat, Vlach infidels, 8). Hâджîî Gerey made an alliance against Boghdân-îlî with Mehemmed II, and an Ottoman fleet attacked Ak-Kırımân in 858/1454. As a result the voyvode Petru Aron accepted Ottoman suzerainty, agreeing to pay an annual tribute of 2000 ducats (autumn 859/1455) (Fr. Babinger, Beitrgze zur Frühgesch. der Türk. in Rumeliem, 21), and the sultan granted the merchants of Boghdân freedom to trade in the Ottoman dominions (Kraelitz, ibid.).

Stephan the Great (1457-1504) renewed the vassalage to the king of Poland, repulsed a attack by the Crimeans in 873/1466 and entered into diplomatic relations with Uzun Hasan [q.v.], and defeated the Ottoman beylerbeyi of Rûmeli on 2 Ramadân 879/
Finally Mehmed II invaded Boghdan and burned its capital Su'ceava (Rabîî I, 880/July 1475). In 889/1484, as a result of the joint action of Bayazid II and his vassal the Crimean Khan Ak-Kîrmân and Kili were occupied by the Ottomans, and Kavschan and Tombasbar by the Kîhân. In 897/1492 Stephen, by sending tribute and his son to the Porte, acknowledged Ottoman suzerainty.

Under the Ottomans Ak-Kîrmân and Kili became more actively engaged in the commerce of the Levant (this can now be seen from the records of the Ottoman customs houses of this period, at the Başvekalet Arşivi Istanbul, Maliye no. 6). With its exports of cereals, meat, butter and wax the trade of Boghdan became, under a monopoly system, more and more dependent on the Istanbul market.

Ottoman-Boghdan relations rested on the Islamic principle of the dâr al-'âshqî [q.v.], as expressed in the 'âshqî-nâmes granted by the Ottoman sultans and the berdâts issued to the voyvoodes (cf. the berdât of Alexandru VI Iliaș in Ferîdun, Mûnschêldî, ii, 398). The bonds attaching the voyvoode to the Porte were made still stronger when he received his appointment directly from the sultan, the first voyvoode so appointed being Petru IV Râresh (933/1527). The voyvoode's whole authority emanated from the sultan. The sultan, in his berdât, enjoined upon all the boyars, priests and people that they should recognise the voyvoode as their ruler (beg); if they failed to do so their land would be regarded as dâr al-'âshqî. The voyvoode's symbols of authority were the standard, the robe of honour (khîṣ săd), and the red bôrk (felt cap). An aqlî accompanied the voyvoode to his capital, seated him on his throne, and had the proclamation read to the people. As late as the 19th century it was felt to be important that the voyvoode should be a descendant of a former voyvoode (cf. Ferîdun, ii, 398, 446). Nevertheless the wishes of the local boyars were taken into consideration. The Ottomans, assisted by the Crimean Tatars, had no great difficulty in removing pretenders supported by Poland or the Cossacks and who refused to recognise the voyvoode or the sultan's order of deposition. After the treachery of Dimitri Kantemir in 1123/1711 the people of Boghdan were regarded as khârâdî-gâtâr raś'îyyet of the Sultan, who was obliged to defend them against their enemies and to depose voyvoodes who oppressed them. The boyars never formed a hereditary nobility. In the 17th-18th century they were no more than a class of wealthy peasants. The Porte was able to strengthen its control of the country by playing off the boyars against the voyvoode and vice versa. In the 12th-17th century the boyars became great landowners and the peasants were reduced to serfdom; but the Phanariot voyvoodes tried to break the power of the boyars, and in 1155/1740 Constantine Mavrokordato abolished serfdom and freed the peasants from their control. From then on the boyars looked for support more and more to the Christian powers, especially Russia. By the Regulament Organic, which was drawn up in 1247/1831 during the Russian occupation, the council of boyars was given the right to elect the voyvoode.

In the course of time the Ottoman state had absorbed various parts of the principality into the dâr al-Islâm. Sûleyman I's campaign of 945/1538 represents a turning point in many respects: the voyvoode was brought into closer dependence on the Porte, and the district of Bugâjk [p. 240] was annexed to the sultan's dominions. After the treaty of the Pruth under an Ottoman Pasha. In 1189/1775 Austria seized the north-western part of the country (Bukovina), and in 1227/1812 Russia annexed Bessarabia. After the Treaty of Küçük Kaynarca (1188/1774) Russia posed as the protector of Moldavia, and eventually after the Treaty of Ak-Kîrmân (5 Rabîî I 1242/7 Oct. 1826) Ottoman suzerainty over the principality became nominal and Russia was recognised as the Protecting Power. In 1270/1859 the twin principalities of Wallachia and Moldavia (Mamlûkatayn) were united, though the Sultan did not recognise the union until two years later (28 Dümâda I 1278/2 Dec. 1861).

dominantly Muslim; even before the partition of the sub-continent in 1947 it had the largest number of Muslims in the whole of Bengal. They are mostly converts from the Kóor or Rádháns of the northern areas although there are some Patháns and Sayyids also. The district and the town are both liable to cyclones and floods, sometimes of a terrible nature. In 1281/1864 many houses and trees were levelled to the ground by the cyclone which swept over the district. In 1304/1886 the town was inundated when 18” of rain fell within a short span of 1½ hours. Earthquakes of great intensity have also frequently occurred. The severe earthquakes of 1885, 1888 and 1897 did considerable damage to both life and property. Many of the brick buildings in the town were destroyed in the earthquake of 1897.

The district seems to have been converted en masse to Islam in the 7th/13th century as most of the villages still bear Hindu names but have no Hindu inhabitants. In 1905/1906 when the district was re-conquered by Rádž Mán Singh, the Mughal viceroy, he built a mud fort at Shirpur and named it Salinnagar after Džاجhángr. A fort was also built at Mahásthán, now desolate. Shirpur, to the south of Bógra, was founded by Shír Khán, the Afgáhn ruler of Bengal (c. 666-70/1268-72). These two places abound in archaeological remains while in the town itself the “Bogra Palace”, the seat of the Cawdhari family, is the only place of some antiquity and interest.

Bóhora (Bóhras, Buhrah), a Muslim community in Western India (mainly of Hindu descent, with some admixture of Yemenite Arab blood), for the most part Shíis of the Ismá’ílî sect, and belonging to that branch of the Shíís which upholds the claims of al-Mustá’íl (847-945/1442-1537) to succeed his father al-Mustánṣir in the Fátimid Caliphate of Egypt. For the history of the Fátimids, see the articles Fátimids and Ismá’ílīs. Mustá’íl opposed his brother Nizár, whose adherents (the so-called Assassins) are represented in India by the Kídájas [q.v.]. The name bóhora denotes a “trader, merchant” (from the Gújjarátí bohórâ, “to trade”) and records the occupation of the earliest converts to Islam. This is clearly mentioned in an Arabic work, al-Tardiama al-gdhira li-Firfyat Borhat al-Báhiyya. A copy exists in the library of the Bombay branch of the Royal Asiatic Society. It has been translated into English by K. M. Jhaveri, A Legendary History of the Bohoras, Journal Bombay Branch Royal Asiatic Society, 1933, New Series, Vol. 9, 37-52. The text has been edited by H. M. Fakhr (Tálib), in the Journal Bombay Branch Royal Asiatic Society, 1940, N.S., Vol. 16, 88. Other accounts give Muḥammad ‘Abd Allah, whose tomb is still revered in Cambay, as the name of the first Mustá’ílî missionary in India (died, 532/1137). The Cúlykya dynasty of Anahílávída was then ruling over Gújjarát and the Ismá’ílî missionaries seem to have been allowed by the Hindu government to carry on their propaganda without interruption and with considerable success. In 1297 the Hindu Kingdom came to an end and for a century Gújjarát remained more or less in subjection to Díhlí. However, under the independent Kings of Gújjarát (1396-1572), who favoured the spread of the Sunnî doctrine, the Bohoras were on several occasions exposed to severe persecution.

Up to 946/1539, the head of the sect resided in the Yemen, and the Bohoras made pilgrimages to him, paid tithes and referred their disputes for decision and settlement. In 946, however, Yúsuf b. Sulaymán migrated from the Yemen to India and settled in Sídhpúr (Bombay State). About fifty years later, a schism occurred after the death of the dâ’í Dá’úd b. ‘Adjak Shâh in 966/1558. The Bohoras of Gújjarát, in fact the large majority of the community, chose one Dá’úd b. Kúshr Shâh as his successor, and sent the tidings of his appointment (Ar. názîr) to their co-religionists in the Yemen, but the latter, including a small proportion of the community in India, supported the claims of a certain Sulaymán, who claimed to be the rightful successor in virtue of a
formal mandate from Dā'ūd b. 'Aḍāb Ẓāhīr. This document is still in the possession of the Sulaymānī da’wat (the communal administration is called da’wat; the t is pronounced by the community), and its authenticity has never been subjected to a scientific, critical or legal examination. Sulaymān died in Ahmādābād, where his tomb and that of his rival, Dā’ūd b. Kuṭb Ẓāhīr are still reverenced by their respective followers. Those who recognise the claims of Sulaymān are called Sulaymānīs and their da’wat is in the Yemen. His chief agent in India is called the ma’ṣūm, and the seat of the Sulaymānī da’wat is in Baroda, where there is a good library of Ismā’īlī MSS. Another difference is that the Da’ūdīs use a form of Gudjarāti language which is full of Arabic words and phrases, write in the Arabic script for all official purposes and deliver their sermons in this language, whereas the Sulaymānīs use Urdu for the same purposes.

The head of the Dā’ūdī Bohoras resides generally in Bombay, but his headquarters are in Sūrat and are known as the Deorhi. In both places there are good collections of Ismā’īlī madrasa ll MSS. numbering 160 to the Library of Bombay University. There is at Deorhi a well-served by local officiants, called da’wat. In his presence a large number of sectarians perform a form of obeisance, the sadida.

As regards marriage and death ceremonies, and ritual prayers, the Bohora community is in general well-served by local officiants, called ‘adī’s, who are appointed by the Mullādī Ẓāhīr and are the servants of the da’wat. They perform duties similar to those of the ḥādis of the Sunnīs, but in addition refer disputes to the Mullādī Ẓāhīr and have a much greater hold over their “parishioners”.

A feature of the Bohora community both in India and elsewhere is that they form themselves into guilds, have little to do with others, and do not intermarry even with other Muslims, much less with adherents of other religions, and take little part in public affairs. In general, they restrict themselves to trade; but in some parts of India, Ceylon and East Africa, and particularly amongst the Sulaymānīs, certain families have entered public life and taken to Government service.

Two insignificant secessions from the Dā’ūdīs may be mentioned: (i) The ‘Aliyya Bohoras, who in 1624 supported the claims of ‘Ali, the grandson of Shakhīy Ẓād, the head Mullā, in opposition to Shakhīy Tavyib, whom Shakhīy Ẓād had nominated as his successor, and (ii) the Nāgūšhās, who broke away from the ‘Aliyya sect about the year 1789; their name indicates that they consider the eating of flesh as sinful. The Dūfārī Bohoras are mainly descended from the Dā’ūdī Bohoras who became Sunnīs in the reign of Musaffar Shāh (810-813/1407-1411) and succeeding Kings of Gurjārāt, but they have received accession to their numbers from Hindu converts. They derive their name from a saint named Sayyid Ahmad Dūfār Ẓāhīr (15th Century), whose descendants they reverence as their spiritual guides.

The Bohoras keep their religious books secret, but recently some of their works on law (such as Da’dī al-Mu’āmmadī), history (such as Sirat Sayyidi al-Mu’āwwiyad), and philosophy (such as Ṣirat al-4‘ābī and al-Risāla al-Djāmī’s) have been printed. Further details will be found in the bibliography by W. Ivanow, Guide to Ismaili Literature, London 1935, of which a second edition is contemplated. For sect religion and doctrines see Zāhid ‘All, Ḥamārī Ismā’īlī Madīḥāb awr uskhu Ḥabībat (Urdu), Haydarābād, Deccan, 1954/1373. In this work a full exposition of the kābi’ah (the Ismā’īlī term for their secret philosophical doctrines) has been given by a learned Bohorā. Recently A. A. A. Fyzee has given his collection of Must‘ālī Ismā’īlī MSS. numbering 160 to the Library of Bombay University.

History of the da’wat: No exhaustive history of the Bohorās has been written so far on scientific lines. See however an Arabic work still unpublished, Munītasa al-ʿĀkhrār (2 vols., see W. Ivanow, Guide, no. 335), on which is based the Gudjarātī work lithographed in the Arabic script, Ma’wīsī Bahār fi Ṣāḥab al-Du’dī al-ʿĀkhrār, 3 vols., by (Miyān Ẓāhīr) Muḥammad ‘All b. Ǧilwābāḥ, Bombay, n.d.

The literature of the da’wat is still mostly unpublished, but has been described by W. Ivanow, op. cit. (with addenda by Paul Kraus in RB1, 1932, 483-90). For further bibliographical material see A. A. A. Fyzee, Materials for an Ismaili Bibliography, 1920-1934, Journal of Bombay Branch of the Royal Asiatic Society, 1935, 59-65, and ibid., 1940, 99-101. Several important texts have recently been edited and published by Dr. Muḥammad Kāmil Ḥusayn (Cairo).

BOHTĀN [see KURDS]

Bolor Daghi [see PAMIR]

Bolu (Boli, near anc. Bithynium, later Claudipolis) 40° 15’N 31° 30’E. The capital of a forested NW Anatolian widyet, elevation 710 m., area 11,140 sq. km., lying between the Saḵrya river bend and the Black Sea. In 1955 the population was 11,884 (town) and 318,612 (province). Bolu lies in a plain on the Bolu Suyu and subject to severe earthquakes, notably that of May 26, 1957. It is on the highway 263 km. from Istanbul and 208 from Ankara. It boasts 32 mosques: a bath dated 791/1388-9, a women’s teachers college, forestry school, other fine primary and secondary schools, a hospital, and new "briquette" and lumber factories. Bolu is the home of Korgöl, Kāšk Ẓāhīr Dūrī and good cooks. Lake Abant lies 37 km. SW. Atatürk visited Bolu from 17/19/vii’34 and İnönü from 5-7/vii’39. Its kādi’s are Akchakollla, Bolu, Düzɟle, Gerede, Göynük, Kübrajk, Mengen (where lignite has been exploited since 1956) Madurdur, Sebn and Yığhisu. Bolu fell to the Ottomans circa 726/1325, to the
Isfendiyaroghullari from 805-27/1402-23, was retaken,
governed by Prince Siileyman (914-15/1509) ... 832/1428-9, rebuilt,
partly by Sinan (mosque, bath and fountain of
Rustem Pasha, cf. Uzuncarsili, . . . Kitabeler, ii),
till 1231/1864, attached to Kastamonu till
1341/1923. It became a

of various groups of functionaries in the admini-
strative organisation of the Ottoman State. In the old
Ottoman military organisation the commanders of the
boluks [q.v.] in the odiak [q.v.] of the Janissaries
were generally known as yayabashi or ser-piyade
(chief infantryman), while the commanders of the
boluks in the odiak of the tashjam-oqians [q.v.] were
called tufengbishi. It was only the commanders of the
“bölük of the agha” (see bölük) who were called
boluk-bashi, the most senior being known as Bash-
boluk-bashi. The Bölük-băshis were mounted and had
an iron mace and a shield tied to their saddles. When
the Sultan left the palace to go to a mosque, the
Bölük-băshis were present wearing ornate clothes
and holding in his hand a reed instead of a spear. Under
Suleyman the Magnificent there were 58 böyük-
băshis of “bölük of the agha”; their daily pay was
9 aspers. Their numbers and pay were later increased.
The Besh-bölük-bashi was appointed on promotion
junior agha of the odiak known as that of katar-
aghalari (aghās of trains or caravans). Bölük-băshis
of the böyük of the agha, when invested with a
timdr, were numbered among the wardens of for-
tresses and received a life pension of 5,000 to 8,000
aspers). Apart from the odiak of the Janissaries, the
mounted kapt-i buls [q.v.] had their bölük-băshis
commanding separate böyük, as had the segbdns
(keepers of the Sultan’s hounds), levonds (irregulars)
and tufengbishi (fusiliers). For more details see
Ismaïl Hakkı Uzungarşılı, Osmanlı Devleti Teshhid-
danand Kapısı Kulu Ocakları, i, 1943, and Gibb
and Bowen, i, index. (I. H. UZUNÇARŞILI)

BÖLUK (from the verb bölmek), meaning a part,
a section, or a category, was used in Eastern Turkish
and in Persian to designate a province or a region.
In Anatolian Turkish, from the time of the Tansımât
[q.v.] onwards, it designated units of infantry or
cavalry under the command of a yüzbaşı (captain).
In the old Ottoman military organisation, the term
bölük was used in the kapt-i buls [q.v.] odiaks [q.v.]
as well as in provincial troops and the military
retinues of senior officials. The size of the böyük
varied. In Janissary odiaks, for example, which numbered
1,000 men, there were 20 böyük of 100 men each.
The commander of the böyük was known as
yayabashi (chief infantryman). The Gelibolu
(Galipoli) odiak of ‘tajjami-oqians [q.v.], which numbered
at first 400 men, consisted of 8 böyük of
50 men each. These böyük were commanded by an
officer known as torbaş. Janissary odiaks were
later enlarged to include 101 böyük, known also as
djemdaşı and orta. Each böyük had a different name
and function. Thus böyük 1-3 were known as djemdaš-i
shuturbdn (djemdaşı of camel drivers), the 28th böyük
was the böyük of imâm-i hudut agha, böyük 60-63 were
known as solah-ortası (the orta of Solak guards).
The Segbdns (Keepers of the Sultan’s Hounds),
who constituted an independent odiak until 1451,
were assigned on that date by Sultan Mehemmed II to the
odiak of Janissaries as the 65th orta. They retained,
however, an autonomous organisation consisting of
34 bölük. Each böyük had a different size, name and functions.
As a result of the mutiny organised by the
aghā (commander) of the Janissaries under Bayezid II or Selim I, an aghā was appointed by the Palace
and put in charge of a separate organisation
consisting of 61 bölük of the aghā, in the hope that
he would maintain a balance of forces in the odiak.
It was these that were usually meant when the term
bölük was used. Otherwise if a böyük consisted of
armourers, artillerymen, artillery drivers etc.
meant, its name and the name of the odiak were
usually given. There were 6 böyük in the mounted
odiak of kapt-i buls. Their members were known as
“the people of the böyük or «the people of the six
bölük”. Excluding the sipahîs and silâhdârs, they
were known as böyük-i erbaa (four böyük). The
seven Ottoman odiaks in Egypt were called elli-
seb’a (seven böyük). The officers of these various
bölük enjoyed different rates of pay and were
subject to different rules of promotion. As in the
case of odiaks, the importance of böyük in the eyes
of the Government varied from time to time.
For detailed information on odiaks and böyük see
Ismaîl Hakkı Uzungarşılı, Osmanlı Devleti Teshhid-
danand Kapısı Kulu Ocakları, i, 1943, and Gibb
and Bowen, i, index. (I. H. UZUNÇARŞILI)

BOLU (BOLWADIN), the title given to the headmen
of various groups of functionaries in the admini-
strative organisation of the Ottoman State. In the old
Ottoman military organisation the commanders of the
bölük [q.v.] in the odiak [q.v.] of the Janissaries
were generally known as yayabashi or ser-piyade
(chief infantryman), while the commanders of the
bölük in the odiak of the tashjam-oqians [q.v.] were
called tufengbishi. It was only the commanders of the
“bölük of the aghā” (see bölük) who were called
boluk-bashi, the most senior being known as Bash-
boluk-bashi. The Bölük-băshis were mounted and had
an iron mace and a shield tied to their saddles. When
the Sultan left the palace to go to a mosque, the
Bölük-băshis were present wearing ornate clothes
and holding in his hand a reed instead of a spear. Under
Suleyman the Magnificent there were 58 böyük-
băshis of “bölük of the aghā”; their daily pay was
9 aspers. Their numbers and pay were later increased.
The Besh-bölük-bashi was appointed on promotion
junior agha of the odiak known as that of katar-
aghalari (aghās of trains or caravans). Bölük-băshis
of the böyük of the agha, when invested with a
timdr, were numbered among the wardens of for-
tresses and received a life pension of 5,000 to 8,000
aspers). Apart from the odiak of the Janissaries, the
mounted kapt-i buls [q.v.] had their böyük-băshis
commanding separate böyük, as had the segbdns
(keepers of the Sultan’s hounds), levonds (irregulars)
and tufengbishi (fusiliers). For more details see
Ismaîl Hakkı Uzungarşılı, Osmanlı Devleti Teshhid-
danand Kapısı Kulu Ocakları, i, 1943, and Gibb
and Bowen, i, index. (I. H. UZUNÇARŞILI)

BOLWADIN (BOLVADIN, sometimes Karamuk, anc.
Polybotomu) 38° 44’ N, 31° 05’ E. A municipality
and kadâ in the wilayet of Afyun Kara Hışar [q.v.],
with its own and Ishâkli nahiye (its former nahiye
of Çay, with 20 villages, became a kadâ on April 1,
1938/1357), consisting of 26 villages. The population
in 1956 was 12,604 (town), 65,250 (district); ele-
vation 900 m., area 2,420 sq. km. Bolvadin lies 45 km.
E of Afyun, 8 N of Çay railway station, N of the Sazlı
and Eber lakes and a fertile plain watered by the
Akar Çay, on the old Bagdad road and the modern
Eskisehir-Konya highway. Bolvadin was under the
Aşraglı-oğulları [q.v.] circa 702-742, taken by
Murad I, regained by the Germiyan-oghulan after
805/1402, retaken by Murad II in 832/1429-30, rebuilt,
partly by Sinân (mosque, bath and fountain of
Rustem Paşa, cf. Urunçarşılı, . . . Kitabeler, ii),

BOMBAY CITY, capital of Bombay State, one of the chief ports of India and an emporium of trade and manufacturing industries. Its area is 111 sq. miles, and the population of the city in the census of 1951 was 2,839,270. Of these, 281,975 had Urdu as their mother tongue. The figures include Pashto, 2,536 Arabic, figures which indicate the major centres of Muslim population. Among the important classes of traders, Memons, Bohorás & Khodjas [qq.v.] constitute an appreciable number. Their enterprise in trade & commerce is well-known and they are prominent in trade relations with East Africa, the Persian Gulf, Malaya, Singapore and other places.

The history of the city is interesting, the present emporium having grown out of seven detached islands with mud swamps in between. There were Muslim rulers before the advent of the Portuguese, and a prominent relic is the tomb of Shaykh ‘Ali Pârâ, built about 835/1431-2 and repaired in 1674 A.D. An annual fair is held here and it attracts a large number of visitors. There is a Dîâmî Masjid also dating from 1902.

BOMBAY STATE, one of the States of the Indian Union, covering the territories of Cutâ, Saurâshtrâ, Gujîrât, Mahrâshtrâ, Marâthwâdâ and Vidarbh. The present limits of the State territory were decided upon in consequence of the reorganization of the States of the Indian Union that took place in 1956. The composition of the State differs from that of the other States of the Union inasmuch as it comprises areas having two different languages, namely Marathi & Gujarûtî. The total area of the State is 190,872 sq. miles and the total population is 48,264,622. The figures of population are based on the census of 1951. The whole of this State was at one time under Muslim rule, and even now, in many of the important centres, population statistics reveal the existence of a substantial proportion of Muslims. The Muslims constitute the second most important religions group in the State, though their numbers have gone down in recent years due to the emigration of some Muslims from the State to Pakistan after partition. In 1951, at the last census, 5.33% of the population of the State had Urdu as their mother tongue. The major centres of Muslim population apart from the city of Bombay are the districts of Ahmedâbâd, East Khandesh and Sorath. The majority of the Muslims are Sunnis.

to September and the coldest months whose coolness
is increased by the NE. winds then blowing con-
stantly and frequently heavy with sand. The
index of aridity compares with that of Tanezrouft,
but the country differs from the central Sahara in
that it does not have long series of dry years; the
rains, even if the fall is slight, come each year at
least from May to September. This regularity is not
in itself enough to explain the existence of profuse
vegetation which round the springs takes on an
almost tropical aspect. Water in fact is abundant:
salt lakes at the foot of the Emi Koussi, pure or
natronated springs of the central depression, layers
of water saturating the sands of the valleys or
appearing on the surface on the southern basins,
the lakes of Ounianga. These waters apparently have
their origin in the spates of the wadis of the Emi
Koussi, which soak between the volcanic outcrops
and percolate through the sandstone to reappear
in the depressions.

The character of the steppe changes from north
to south. The 'had' which preponderates in the north
and which supports a few species of grassy plants
gives way about the 17th parallel to the 'cram-cram'-(cenchrus biflorus). Then Sahilian species appear,
forerunners of the savannah; the domain of the
ariels and ostriches begins. Islets of woodland in
the northern valleys and especially in the central
depression—doum palms and particularly handsome
acacias—seem to bear witness to a time more
extensive and denser woodlands.

Oases and pasture have attracted the populations
of the neighbouring mountains since the 10th
century. The nomad tribes of eastern and central
Tibesti (the two branches of the Tûbû people: Teda
and Dazâ) occupied the oases of Gouro then the
central oases (Woun), pushing back the Donza who
seem to have been the aboriginal inhabitants,
towards the palm groves to the south of the Emi
Koussi, their present habitat. The nomads belonging
to the lowest caste clans have become sedentary,
sometimes partially, being enabled by the 'had' and
supplies of natronated water close by to keep
their camels. The others have drifted to the southern
steppes which are richer in pasture. Some tribes
have reached as far as the Chad lowlands where
they have changed from camel to cattle rearing.

Other populations, coming down from Ennedi
and Wadai, have mixed with the Tûbû. The Anak-
kaza, who constitute the most important group in
Borkou, were formed in this way, whereas the
Gaëda seem to be descended from the Tundjûr of
Kanem. Borkou has thus been a melting-pot in
which, however, Tûbû influence has predominated.
The Dazà language is spoken by most of these
populations, their customs are those of the Tûbû,
and the Tûbû physical type—non-negroid black—is
the commonest. One can understand that the Arabs
should have lumped the whole of the Borkouans
together under the single name of Kura'sân. According
to official statistics the Borkouans now number about
20,000.

The nomads live by stock rearing supplemented
by the resources of the oases, whether they
still enjoy over these suzerain rights acquired in
the past, or whether the gardens are cultivated for
them by the sedentary Kamadjas, whose origin,
though certainly servile, is ill-known. The Kamadjas,
who had become share-croppers of the nomads,
have gradually freed themselves from their tribute-
obligation with the support of the French
administration. The palm groves contain at present about
1,000,000 productive trees of which 90 per cent are
in the central depression. They produce 30,000
quintals of dates per annum. The irrigation
channels in the gardens are fed by balance-arm wells and
produce on the average 120 tons of wheat and 200
tons of millet per annum; vegetables (onions,
tomatoes, sweet potatoes, and pimentos) are also
grown. Salt-pans from which salt is obtained by
evaporation are numerous in the northern valleys,
and their product, joined with that of Ennedi,
represented (in 1930) half the Saharan production.
The nomads of the southern steppe bring meat,
butter, and tanned skins to the oases to exchange
for their products. Sedentary and nomadic popu-
lations alike obtain their tools and arms from the
despised smith caste. These smiths, known in
the Tûbû domain as Azzas, deprived of local supplies
of ore which are now exhausted, use as their raw
material scrap iron or raw iron plates bought in
Boru.

These exchanges suffice for local needs. 1,200 miles
from the Mediterranean coast by the economically
unimportant Kufra track, detached from the trade
routes joining the Sudan with the Mediterranean
(which avoid Tibesti and its brigands), detached
from the tracks leading to the Nile lands passing to
the south of Wadai, Borkou has always lived turned
in on itself. For this reason archaic modes of life have
survived in these oases until the present day and
paganism had, not retreated before Islam, in the
19th century. This isolation has of late years been
twice violently broken. For half a century after
1842 the country was ravaged by the waves of the
Awlad Sulaymân who swept down from the Fezzan
in flight from the Turks. Then, about 1900, the
Sanûsiyya, falling back from Kanem and Manga,
settled themselves firmly at the two ends of the
central depression, at N'Galakka and at Woun
(alias Faya, later Largeau). They made their
saduwiyyas, especially that at Gouro, agricultural
centres as well as intellectual and religious centres
from which Islam was propagated. But they indulged
in raids which, by forcing the nomads to choose
between the palm groves occupied by the Sanûsiyya
and the pasture lands to the south controlled by
France since her occupation of Wadai and Bahr al-
Ghazâlâl, disorganized and so ruined economic life.
The Sanûsiyya had the backing of the Turks, who
placed garrisons in the country in 1911, but the
Italo-Turkish conflict brought about the with-
drawal of these garrisons in 1912, and in 1913
France occupied the whole of Borkou.

BORNEO, the corrupted form of Brunai (which
is a town in British North Borneo at about Lat.
5° N. and Long. 115° E.) applied to the largest of
the greater Sunda Islands in Indonesia, probably as
early as the 14th century, and in any case by the
Portuguese since the 16th century. The greater part
of the island is now called Kalimantan and consti-
tutes a province of the Indonesian Republic. From
the view-point of Muslim studies the importance of
the island is small, as practically the whole population
of the interior of Borneo is pagan. Islam and Christi-
anity penetrated in the coast areas whence they have been slowly spreading into the interior; since 1942 political conditions favour the propaganda of Islam rather than the spreading of Christian denominations. The character of the local Islam is not different from what we find elsewhere in Indonesia (q.v.). The only important centre of Muslim activity is Pontianak (q.v.) on the West Coast. (C. C. BERG)

BORNU, or Barnů, the name—of doubtful etymology the root of which reappears in Beriberi (=Baribari) as their neighbours call the Kanuri—given to a region in the hinterland of West Africa and used:

(a) loosely, of an area never precisely defined in geographical terms, were there was established one of the major states of that part of the Western Sudan,—see para. 6 below,—and

(b) of a province;—area, according to 1931 census, 45,900 square miles—lying between latitudes 10° and 13.5° N. and longitudes 10° and 14° E., in Northern Nigeria, containing that part of (a) west of the Anglo-German and south of the Anglo-French original international boundaries, plus an adjacent narrow strip on the eastern frontier of the former German Kamerunus mandated to Great Britain after the war of 1914-18; including the Shavaahods of Bornu and Dikwa, together with some other administrative units.

2. Geography. Bornu consists in the main of a vast sandy plain, drained by two rivers,—the Yobe running from west to east in the north and the Yedseram from south to north in the south,—into the marshy shores of Lake Chad which lies in its north-eastern corner. The only mountainous features occur in the extreme south and south-east of the Province. In earlier times the Shari River which also flows from south to north into Lake Chad was regarded as the eastern border of Bornu, dividing it from Bagirimi (q.v.) country. The early medieval geographers and historians were cognisant of the region under this name, which appears on the Catalan atlas of Charles V (1375 A.D.), and is mentioned by al-'Umari (d. 1348 A.D.), Ibn Khalduan (d. 1406 A.D.), al-Maghiri (d. 1447 A.D.) and others. It was visited and described (Book VII) by Leo Africanus (d. circa 1552).

3. Transport and Trade. The main modern motor road (Kano-Maiduguri-Fort Lamy) runs from west to east across the region, with feeders from north and south, as did the former caravan route (Kano-Kukawa-Bilma). There is a permanent aerodrome at Maiduguri and emergency landing grounds elsewhere. Of old slaves and ivory were the main exports, now groundnuts, hides, gum, cotton and numerous minor items have replaced these. Imports consist of manufactured articles, especially cotton goods. There is a considerable internal trade in dried fish from the Lake Chad area, salt and kola nuts.

4. Economy. The region is not industrialised and contains no cities. It is self contained so far as the needs of life are concerned, and its population is mainly agricultural. In the 1952 census, of 790,361 males, 376,561 are shown as engaged in agriculture and fishing. Its capital wealth consists in numerous herds of cattle, sheep and goats, together with the fisheries of Lake Chad.

5. Ethnography. (a) The population of the region described in para. 1 (b) above comprises the Kanuri, Fulânî, Hausa (q.v.), Shuwa Arabs and some other tribes. At the census of 1931 the salient figures for the Bornu Province of Nigeria were—Kanuri 752,683; Fulânî 168,944; Hausa 84,729; Shuwa Arab 98,909; Bura 89,826. Total—including other less numerous mostly pagan tribes situated mainly in the hilly south and south-east of the Province,—1,595,708. The comparable total in the 1951 census was 1,128,360.

(b) Languages. Kanuri (q.v.) is the major language of the region, but of importance also are the colloquial Arabic spoken by the Shuwa Arabs, and Fulufülde spoken by the Fulânî (q.v.). Hausa is little spoken except by the trading elements in the towns. The pagan tribes have their own tongues. English is also used by those who have been educated in the more advanced schools.

6. History. The early history of Bornu is linked with that of the Kanem Empire. In 666 A.D., 'Uqba b. Nafi' penetrated the east central Saharan desert as far as Tibesti in the Tebu country to the north of Lake Chad, the inhabitants of which, according to legend, were the So, a giant race originating from the Fezzan. According to tradition the first king of Kanem in this area was one Sayf, claiming descent from Sayf b. Dhi Yazan of the Banû Himyar. This tradition may be post-Islamic and fabricated. The ruling class of old in this area was called the Maghumi, a word the root of which appears in the Kanuri words Mai (ruler) and Maghira, the title of the Bornu Queen Mother, an office which carried and still carries considerable power. There is strong traditional and some written evidence that this ruling class was 'white-skinned', and a reasonable supposition is that it was originally matrilineal and probably of origins connected with the Tawârîk, (plur. from sing. Tarî, vulg. Tuareg). The Saiwafa were a nomadic people who absorbed or conquered the Tebu peoples to their north, and founded the Empire of Kanem, with capital at Njimi. Their rulers are said to have given 'the Sultan of the Beriberi' permission to settle, and tradition speaks of an invasion by Muslim Beriberi from Yaman via Fezzan and Kuwar in 800 A.D. The Empire of Kanem had received Islam by the 11th century if not earlier, and by the 13th century was powerful enough for its influence to reach as far as Egypt in the north east and Dikwa in the south. Ibn Khalduan speaks of the 'king of Kanem and the Master of Bornu', the last word apparently describing the southern part of the Kanem empire from Lake Chad to Dikwa. But, circa 1389 A.D., the Saiwafa dynasty was driven out of Kanem by a kindred tribe, and the consequent tribal movements resulted in the advance of the Kanuri nation to the west of Lake Chad, and finally to their founding, circa 1470 A.D., on the River Yo, of Birni N'gazargamu as the capital of Bornu and of the Kanuri nation. It remained their capital for three centuries, though, circa 1507 A.D., Njimi itself was recaptured by the Kanuri, and old Kanem became a province of the new Bornu Empire. In the 16th century and under a succession of able 'Mai's or rulers (Muhammad 1526-45, Dunama 1546-65, Abdallah— in whose reign Fulânî settlers in Bornu are first mentioned—1564-70) the Bornu Empire expanded greatly, and this process was no doubt helped by the conquest, in 1592 A.D., by Morocco of Bornu's rival in the western Sahara, the empire of Songhay. Of these rulers the greatest was probably Mai Idris Atuma, (ob. 1602), who successfully campaigned as far afield as Kano, and also subdued the tribes of Air (q.v.) and the Tebu. Mai Idris made the pilgrimage to Mecca and was buried in Alò Lake near Maiduguri. This peak was followed by two centuries of quiescence (Mai Ali, 1645-84 A.D., made the pilgrimage thrice), during part of which
at least the Bornū Empire seems to have been on the
defensive, for 'All was besieged unsuccessfully in his
own capital by the Tawārīḫ and the Kwararafta.
Contributing causes may have been a series of
severe famines,—one is recorded of seven years' 
duration,—and the general dislocation which followed
the Moorish conquest of Songhay. The Fulānī ḏāḥīḏ
further to the west at the beginning of the 19th
ten century soon had repercussions affecting Bornū, the
suckerinity of which over the Hausa states lying
between Bornū and Sokoto was challenged. In 1808
the Fulānī in Bornū assembled at Gujba, defeated
Mai Ahmad b. 'All and sacked his capital at
N'gazargamu. (One of the successful Fulānī leaders
in this campaign later founded the town and amirate
of Katagum with the title of Sarkin Bornū). Mai
Ahmad fled to Kanem where he invoked the aid of the
Fulānī, who, however, on Mai Ahmad's death soon
after, returned to defeat his successor, Dunama b.
Ahmad. The last named in turn sought the aid of al-
Kanemi, and at this point the modern history of
Bornū may be said to begin. Al-Kanemi, victorious
again over the Fulānī and Baghirmi, restored the old
Sayf ruling house as titular kings and established
himself at Kukawa, where he was visited by Denham
in 1822, as the power behind the throne. His further
attempts, circa 1826, to re-establish the empire of
Bornū over the Hausa states were less successful,
and, after being defeated, he died in 1835, and was
succeeded by his eldest son 'Umar who made peace
with the Fulānī. During the absence of 'Umar on
these negotiations, the Sayf royal house called in
the ruler of Wadai to help them expel the house of
al-Kanemi. This plot failed. The then Mai, Ibrāhīm,
was executed in 1846, and the last of the Sayf
dynasty, his son 'All, was killed in battle. 'Umar now
became de jure as well as de facto ruler of Bornū,
adopting the title Shehu (= Shaykh) instead of Mai,
thus inaugurating the Kanembu dynasty. He rebuilt
Kukawa which had been destroyed by the men of
Wadai, and was visited here by Dr. Barth in 1851
and 1855. War with Wadai was almost continuous,
seriously weakening the strength of Bornū, and the
outlying western territory of Zinder became virtually
independent. In 1853, Rabeh [q.v.] entered Bornū
from Wadai with a well armed and trained force of
some two thousand men, which was altogether too
strong for any forces with their antiquated weapons
which could take the field against him. He defeated
a general of the then Shehu, Hāshim, at Amjā, next
Hāshim himself near Ngala. He then took and
plundered Kukawa, after which he returned to
Dikwa where he made his headquarters, and built
the fort which can still be seen. A cousin, Muḥammad
al-Amin nicknamed Kiarī, of Shehu Hāshim caused
the latter, now a fugitive, to be secretly murdered and
himself advanced against Rabeh from Geldam. The
two forces met at Gashegar and Kiarī's troops had
some initial success, even taking Rabeh's camp, but
were finally put to flight by Rabeh's army. Kiarī
himself was taken and executed. This ended the
resistance to Rabeh in Bornū. Rabeh established a
military regime at Dikwa and sent out columns on
preatory raids. His rule was entirely destructive and
caused incalculable loss and dislocation over a
wide area. In 1900 Rabeh was defeated and killed
by French troops under Commandant Lamy. Rabeh's son, Fāḍl Allāh, fled westwards before the
French, was pursued and finally, on 3 Aug. 1901,
killed by them under command of Captain Dangeville
in an engagement at Gujba in Nigeria, (150 miles on
the British side of the Anglo-French boundary which,
though approved on paper, had not yet been delimited
by boundary commissions on the ground, thus
causing considerable confusion in the then so un-
settled state of the country). The French authorities
offered restoration to Sanda, a son of the late Shehu,
but he was unable to meet their conditions, and
finally the Kanemi dynasty was restored by the
British authorities with Shehu Bukar Garbai, his
brother. Shehu Bukar set up first at Mongonu, then
moved to Kukawa and finally, in 1907, to Yerwa
near Maidugari which has remained the capital of
Bornū to the present time. Dikwa became part of
the German Kameruns, which, after the German
defeat in the 1914-18 war, were mandated to Great
Britain and France by the League of Nations,
Dikwa falling into the former's area. Details on
the history of Bornū in the present century will be
found in the reports of the Government of Nigeria.

7. Religion. Islam is the religion of the Kanuri,
Fulani, Shuwa Arabs and Hausa, and their maddhab
Mālikī. Of the Ţārīḵas, the Kādirīyya [q.v.] and
the Tidjānīyya [q.v.] are the best supported, though
representatives of others will also be found, including
the Sanūsīyya [q.v.] and the Shādhilīyya [q.v.]. The
Church of the Brethren (American Protestant)
Mission operates among the Bura tribe in the south
of the Province. It seems certain that, in modern
conditions, the animism of the pagan tribes will
gradually disappear.

8. Miscellaneous. Notable European explorers
who visited Bornū were Denham, Oudney and
Clapperton (1823), Barth, who made long stays at
Kukawa between 1851 and 1855 and collected much
information about the history and circumstances
of the region, Vogel (1854-6), Beurmann (1860),
Rohlf (1866), Nachtigal (1870-2), Matheucci and
Massari (1880-1), Monteil (1892).

**BOSNA (BOSNIA AND HERZEGOVINA).**

1. General outline.

Bosnia and Herzegovina, with a total area of 51,129 km², lies within the latitudes 42° 26' and 45° 15' North and longitudes 15° 44' and 19° 47' East; it thus occupies the western—largely mountainous—region of Yugoslavia, rich in mineral resources, water-power, and forests. It is divided into two geographical and historical entities—Bosnia and Herzegovina. The name of Bosnia refers to the larger northern part of the country, while Herzegovina comprises the southern districts with the basin of the river Neretva. The name “Bosnia” is derived from the river Bosna (of uncertain meaning but doubtless of Illyrian origin) which flows through the central part of the country. It was round the source and the upper basin of the river that traces have been found of a district called Bosna (first mentioned by Constantine Porphyrogenitus, who thought it belonged to Serbia), inhabited by early settlers, members of Slav tribes. After many changes of fortune brought about by a succession of foreign and native rulers, the region became an integral part of a new State bearing its name, which—under the reign of King Tvrtko I (1353-1391)—comprised not only the present territory of Bosnia and Herzegovina, except for a small district in the north-west, but also a large part of the Adriatic coast with the neighbouring districts in the south and south-east. Under Turkish rule, Bosnia was one of the sandjak of the Ottoman Empire, and from 988/1580 an eyalet which comprised a larger area than that of the present Bosnia and Herzegovina, not only before but even after the loss of territory suffered in the second decade of the 18th/end of the 17th century. The name of Herzegovina dates from the middle of the 15th century when the magnate Stjepan Vukčić Kosača rebelled against the then king of Bosnia and had himself proclaimed “Herzeg (Duke) of St. Sava”. The region later came to be called “Herzegovina” (the land of the Herzeg) and in Turkish: Hersek ili Hersek sandıği. The present territory of Bosnia and Herzegovina roughly corresponds to the area that constituted the province of Bosnia and Herzegovina under Austrian rule (1878-1918) and which was part of the Kingdom of Serbs, Croats and Slovenes (from 1918). The boundaries and the extent of the region remained unchanged during the later administration of the new Kingdom (under the so-called Vidovdan Constitution). After the suppression of parliamentary rule in Yugoslavia (1929), an authoritarian Kingdom of Yugoslavia emerged, made up of nine large administrative units called “banovinas”. This division altered the boundaries of the country, for the two banovinas with their seats within Bosnia and Herzegovina (those of Sarajevo and Banjaluka) now comprised parts of the neighbouring area, with the result that part of Bosnia and Herzegovina territory came to belong to the banovina the seat of which was in Split, while part of Herzegovina was included into the banovina whose seat was in Montenegro. In present-day Yugoslavia a separate people’s republic of Bosnia and Herzegovina has been formed within its traditional historic boundaries.

The social and political organisation of Bosnia and Herzegovina as one of the republics of Yugoslavia, is based on the written Constitution of the Federal People’s Republic of Yugoslavia, passed 17th January 1946, the Constitution of the P.R. of Bosnia and Herzegovina dated 31st December 1946, the Constitutional Law of 13th January 1953 concerning the foundations of the social and political organisation of the F.P.R. of Yugoslavia and the federal organs of government, and the Constitutional Law of 29th January 1953 concerning the social and political organisation of the P.R. of Bosnia and Herzegovina and the republican organs of government.

The P.R. of Bosnia and Herzegovina has, as does each of the Yugoslav republics, its own People’s Assembly with its Executive Council and Secretariats in Sarajevo, the capital city of the Republic. The country is divided into 12 districts and 134 communes (1958).

The population of Bosnia and Herzegovina shown by the census taken in 1953 was 2,847,790. Serbo-Croat is the language spoken by the people (except for small numbers of Slovenian and Macedonian settlers and national minorities) who are, however, divided—as regards nationality—into Serbs (largely of the Orthodox Church, the rest being Muslims), Croats (largely Roman-Catholics, the rest being Muslims) and those that abstained from declaring their nationality (very largely Muslims).

According to the preliminary results of the census of 1953 there were in Bosnia and Herzegovina: 10.3 per cent of no denomination, 35.1 per cent Orthodox, 21.4 per cent Roman-Catholics, 32.3 per cent Muslims, and 0.9 of other denominations.

The official and final results, now in print, of the census taken in 1953 are as follows:

The common language and close ethnical affinity of the population notwithstanding, the people are split into three groups owing to historical influences but mainly to different religious beliefs which were responsible for the formation of national differences between Serbs and Croats. The Islamisation of Bosnia and Herzegovina—the centuries-old borderland of the Ottoman Empire, situated at the very confines of East and West with their respective influences—came to introduce yet a third denominational element. Under Austro-Hungarian rule, the population of Bosnia and Herzegovina was officially classified according to denominations—except for a small number of settlers whose nationality was duly recorded—although the greater part of the people was becoming nationally conscious, i.e., the Orthodox population professed to be Serbs, and the Roman-Catholics Croats. Up to the World War II, Belgrade and Zagreb had each claimed national kinship with the Moslems of Bosnia, hence it seemed that a certain part of the Muslim population—mostly urban intelligentsia had declared themselves Serbs and Croats respectively.
Concerning communications, Bosnia and Herzegovina is still suffering from the consequences of adverse former conditions, especially as regards the railway network. In 1957 the country had 2,111 km. of railways, 1,339 km. of which was of standard gauge as against 772 km. of narrow gauge.

The total value of national production in Bosnia and Herzegovina during 1956 was 215,639 million dinars, the chief sources and amounts (in millions) contributed by each being as follows:

Similar to the inherited underdeveloped state of the country's economy is the inherited cultural backwardness of the people, particularly in rural areas. The Austro-Hungarian government set up state-controlled primary schools without abolishing denominational schools. Compulsory primary education was introduced in 1911, yet in 1912/13 there were in Bosnia and Herzegovina only 374 state-controlled primary schools. The small number of schools, state-controlled and denominational together, could only cope with 18.55% of the children of school age. The Government of the Kingdom of Yugoslavia would only recognise the State primary schools, yet hardly one third of the children of school age were able to attend. The number of primary schools in 1938-39 was only 1,092, hence the large-scale illiteracy at the time. After World War II, despite the great efforts made to increase the number of schools and reduce illiteracy of adults, the official returns of 1953 showed that there were 225,000 illiterate males and 615,000 illiterate females in Bosnia and Herzegovina out of a total of 2,116,000 persons over the age of 10.

In 1945 and over the following years special efforts were made to raise the standard of literacy and education in Bosnia and Herzegovina. Thus in 1957 there were altogether 2,406 primary schools (including the continuation and eight-year schools), 37 "gymnasiums" (secondary classical or grammar schools), 130 professional training schools and 27 others. For adults there were 26 two-year elementary schools, 10 secondary schools, 12 technical schools for workers, 19 schools for skilled workmen and 11 others. Some time after the war a university with seven faculties was founded in Sarajevo, as well as an academy of music and a number of science institutes. In addition to these, there are now three Teachers Training Colleges in Bosnia and Herzegovina, several higher (professional) training colleges, six theatres, sixty science libraries, three hundred and twenty-five public libraries, eighteen museums and a radio broadcasting station.

2. History of Bosnia and Herzegovina under Turkish rule.

(a) During the rise of Turkish power

The establishment of Islam in Bosnia and Herzegovina is associated with the setting up and strengthening of Turkish rule. The first Turkish invasion occurred in the year 788/1386 during the reign of the first Bosnian king Tvrtko I (1353-91, king from 1377) when he was at the summit of his power. The next invasion took place in 790/1388 when the Turkish army was defeated by the Vojvoda Vlatko Vukčić. In the following year, a Bosnian army led by Vlatko Vukčić took part in the battle of Kosovo in support of the Serbian Duke Lazar. In the course of fighting Sultan Murād was mortally wounded and died when the battle had ended, yet Prince Bāyāzīd succeeded in carrying the day and taking Duke Lazar prisoner. After the battle of Kosovo the Duke's successors had to acknowledge Turkish suzerainty. The vassal Serbs considerably weakened the position of Bosnia. King Tvrtko's successor was allowed to rule over the lands that actually belonged to him, while the greater part of Bosnia was in the power of independent magnates each exercising full control over their respective districts. The conquest of Skopje (in Turkish Üsküp) by the Turks in 794/1392 brought about the formation of a Turkish March bordering on Serbia and Bosnia. Skopje became the seat of the first Sandjak-beyi Pasha Yigit, who was succeeded by his son İbşak. From 818/1415 frequent Turkish invasions took place; as a result, Turkish influence made itself increasingly felt in the internal affairs of the country and in the ever growing dissensions among Bosnian barons and pretenders to the throne. Soon after the accession of Tvrtko II (1420-43), who had to acknowledge Turkish suzerainty, Bosnian kings were subjected to tribute by the Turks (from 832/1428-29) who had temporarily occupied and garrisoned a number of towns on several occasions. It was not until the middle of the 9th/15th century that the Turks became firmly established in the town of Hodiđe and the surrounding country — in the present district of Sarajevo—where a frontier March was formed and administered by the Governor ʿĪṣa Bey of Skopje, the son of İbşak Bey, under the direct control of a Turkish dignitary with the title of vojvoda. The area was under dual control, for the Bosnian lords of the surrounding districts were vassals of the Turks. This administrative area is recorded in a Turkish cadastral register of the year 859/1455, but no mention is made there of a settlement called Saray Ovasl though a district of the same name is recorded. However, the origins of Sarajevo date back before the final downfall of the Kingdom of Bosnia, for the townlet of Saray Ovasl is recorded in 866/1362. At that time the Bosnian throne was occupied by Stjepan Tomaš (1443-1461), who relied on the support of the West but failed to obtain release from the obligation to pay tribute to the Turks. On that occasion, the Pope demanded not only the conversion of the king to catholicism but the suppression of "heresy" as well, a region which, despite constant persecution, had taken firm root and become the established church. However reluctantly, the King finally ordered the persecution of the heretics who took refuge in the districts held by Turks and in the region of later Herzegovina. The Turks continued to exploit not only the religious antagonism in the kingdom but social differences as well. The attempt made to unite the Kingdom of Bosnia and the Despotate of Serbia by means of an arranged marriage between the King's son Stjepan Tomašević and a Serbian Princess, brought about the fall of the Despotate and its capital city of Smederevo (1459). Stjepan Tomašević (1451-1463), the last Bosnian kings, came to depend upon the West for support to a much larger extent than his father ever did.

In 867/1463 when the King refused to pay tribute, the Turkish armies, led by the Sultan himself, invaded and rapidly conquered Bosnia. Soon after the withdrawal of Turkish troops, the Hungarian King Matthias Corvinus marched into Bosnia and occupied the town of Jajce with adjacent districts. During the following year Hungarian forces conquered Srebrenik, when two "banats" were set up—the seat of one in Jajce and of the other in Srebrenik—which formed a Hungarian March reinforced by the belt to the South of the Sava. During the 9th/15th century several incursions were launched from here, culminating in a three-day occupation of Sarajevo. King Matthias made every effort to unite the Kingdom of Bosnia. The Turks had earlier given the conquered districts of the kingdom to a cousin of the former dynasty and had founded a titular kingdom which had lasted only up to 881/1476.

The first Sandjak-beyi of Bosnia was Mehmed-bey Minnet-oglu. The sandjak of Herzegovina was founded in 874/1470 (the rest of Herzegovina was conquered by the Turks at the end of 886/beginning of 887); another sandjak was later set up, the seat of which was in Zvornik. The Banat of Srebrenik fell to the Turks in 918/1512, who also captured Jajce and Banjaluka after the battle of Mohac (in 1527 or 1528). From Bosnia the Turks penetrated into Lika and occupied the greater part of Dalmatia with the castle of Klis. The Bosnian sandjak-beyi took part in the conquest of Slavonia.

The seat of the sandjak of Bosnia was in Sarajevo (until the middle of the 10th/16th century) where many imposing buildings were erected by the sandjak-beyi Ghazl Khusrew-bey, who came there as sandjak-beyi in 926/1520 and died in 948/1541. By that time the town of Sarajevo had become a large and important place. However, the seat of the sandjak was moved to Banjaluka (towards the middle of the 10th/16th century), the lay-out and building of which, as a Muslim city was completed by Ferhad Sokolić (Sokollu), a Governor of Bosnia who became the first Bosnian pasha (beyler-beyi). In the year 988/1580 the eyalet of Bosnia was formed, with Banjaluka as its seat, which comprised seven sandjaks (Bosnia, Herzegovina, Klis, Krka, Pakrac, Zvornik and Požega). In addition to the present area of Bosnia and Herzegovina, the eyalet included parts of Slavonia, Lika and Dalmatia, as well as the frontier districts of Serbia. At the beginning of the 11th/ end of the 16th century the eyalet was composed of eight sandjaks, and at the end of the first decade of the 11th/the beginning of the 17th century the sandjak of Požega was incorporated into the newly formed eyalet of Kruna.

The Turkish conquest brought about great changes in the social pattern of Bosnia and Herzegovina. At the time when Bosnia came under Turkish control, the foundations of the structure and organisation of the Ottoman Empire had been completed.

Having conquered the country, the Turks proceeded to introduce their own social structure, a strictly centralised government, and their military
and feudal systems. This resulted in great changes in economic and social relations. Mining, next to agriculture the most important branch of former Bosnian economic activities, was taken over by the new rulers, and all the mines became the property of the sultan. The days of high and powerful feudal lords, masters in their own districts, were gone. In agrarian relations, the timar system was introduced controlled by a central authority. The sandjakbs were administered by governors directly controlled by the sultans, whose incomes were the largest next to those of emperors. Governors used to be replaced too frequently. On the other hand, the pressure on the peasant eased and sheep-raising began to improve. In the countryside generally, patriarchal ways of life and a measure of autonomy became apparent.

At the same time, great religious and ethnic changes occurred involving the whole population. There was a large-scale islamisation. An improvement in animal husbandry in certain mountainous districts, particularly in those of Herzegovina, became evident, sheep-raisers resettled in fertile agricultural districts which had been laid waste by wars and the like. Settling down on fertile lands, thousands of sheep-raisers turned to tillage, thus providing fresh manpower for the improvement of devastated areas. In view of the great importance attached to their work as colonisers, the settlers were allowed to retain their former privileges as sheep-raisers; however, with the growth of the feudal system and more settled conditions the settlers very largely became common re'dâya. Because most of these settlers were Orthodox Serbs, many districts which had been devoid of Serbs now became populated with them.

On the other hand, Islamisation helped the reigning religion to win adherents and partisans among all classes: peasants, feudal lords and townspeople. The islamisation of Bosnia and Herzegovina has not been the subject of comprehensive studies so far, so it still presents a problem awaiting solution. Before the World War I the generally accepted opinion was that of the heretic Church, the so-called Bogumils had passed over to Islam in a body, allegedly because of a similarity of views on moral law, and owing to the earlier persecutions on the part of the Church of Rome. This opinion is still shared by many scholars today (A. Solovjev and others). By passing over to Islam en masse, Bosnian nobles had been allowed to retain their estates, and the traditional pattern of land-tenure in Bosnia and Herzegovina had thus remained unchanged until the 13th/14th century. The timar system was only introduced as a superstructure. One of the chief supporters of this theory, before the World War I, was C. Truhelka. According to Truhelka and others, Bosnia had from the very beginning enjoyed a separate status in the Ottoman Empire.

During the interval between the two world wars some Yugoslav historians (V. Cubrilović, V. Škarić) sought to prove the groundlessness of these views. They were of the opinion that (a) the Islamisation had been carried out gradually, (b) the Bosnian nobles had not retained their estates after the conquest because of the setting-up of the timar system, and (c) the system of land-tenure, such as prevailed during the 18th century and was continued in the following century, had developed only gradually within the framework of the old agrarian system.

Attention has been drawn by modern Yugoslav historians to Turkish sources of the first order, particularly to cadastral registers, which are likely to throw light on the history of the Yugoslav peoples during the period in question; however, the results of the investigations have not all been made public as yet.

Before 859/1455, while the Turks held part of Bosnia under their control, there were no sipâhs timârs in the outlying districts of the borderland governed by Isa Bey, the only timârs being those owned by men of the garrison of the fort at Hodjied. Moreover, in the interior of the borderland, within the estates of Isa Bey, there were a number of sipâhs, mostly Muslims with a few Christians. After the conquest, it was mainly from here and Macedonia, then from Serbia and other regions that the bulk of sipâhs were drawn. Among the sipâhs that were sent to Bosnia there were many of Slav origin. After liquidating the leading representatives of the old Bosnian nobility during and after the conquest, the Turks at first left a few members of noble families and a good number of the old minor feudal landowners in possession of their estates. The conquerors also gave lands to headmen of sheep-raisers. This accounts for the presence at the time of many Christian sipâhs, particularly in Herzegovina.

The coming over of Bosnian feudatories to the side of Turks began rather early, at a time when they had to rely on influential Turks in the settling of disputes. Thus the land of the ducal family of Pavlović was recorded in the cadastral register of 859/1455 as land paying tribute in a lump sum (mukâfa'a) (see Başvekâlet arşivi, Maliye deft. 544). Herzog Stjepan's line of policy was for long one of complete reliance on the Turks. His sons had some time to rely on the Turks as well. His youngest son went over to the Turks, embraced Islam and as Hersekzade Ahmed Pašâ held the office of Grand Vizier five times during the reigns of Bayazid II and Selim I. A considerable number of natives of Bosnia and Herzegovina belonging to Muslim feudal families, as well as boys collected from the re'dâya by devşirme and educated at the Court, were to hold the offices of Viziers or Grand Viziers. Mehmed Pašâ Sokolović (Sokollu), one of the foremost Ottoman statesmen, Grand Vizier 972/1564-987/1579, was descended from a distinguished Serbian family in Bosnia, whose Christian relatives were Patriarchs of Serbia after the restoration of the Patriarchate of Peć (1557). The bonds of blood and kinship between men of Bosnian descent who held high offices and their kinsmen helped greatly to raise the fortunes of certain Bosnian families.

Although the ranks of sipâhs were partly filled with foreign newcomers, the majority were of native descent, raised from among the old Bosnian feudalists or the new sipâhs created during Turkish rule. In the earliest cadastral registers of the sandjaâhs of Bosnia, the names of islamised sipâhs and their Christian relatives are recorded. Likewise, the members of their whole families are found grouped around the names of outstanding dignitaries (see Başvekâlet arşivi, Tapu deft. 18 and 24). During the period there were in Bosnia, adjacent to Sultans' and Sandjaâhs' estates, a number of eñâiks held by feudal landlords and others of the same rank. Some of the sipâhs were likewise owned eñâiks in addition to timârs, but most of the latter contained no eñâiks as a rule. The eñâiks were hereditary possessions and remained as such because the sipâhs have lost possession of the timârs. On the whole it would seem that a number of earlier feudatories, converted to Islam, had kept their inherited land in the form of eñâiks. The latter, however, were few in number and consisted of
small estates, thus the theory can hardly be upheld, as C. Truhelka would have it, that the Bosnian nobles had remained in possession of their estates at the time of the conquest and had succeeded in holding them till the 13th/14th century. As a matter of fact, the number of çiftlik continued to increase, however slightly, until the beginning of the 10th/ the end of the 15th century when, during the reign of Sultan Süleyman the Lawgiver, the çiftlik of this kind were finally abolished. Such çiftlik, however, were to serve as a basis and pattern for the future development of new agrarian relations out of the old.

Muslim descendants of Christian sipahis and members of islamised families who had mended their fortunes under Turkish rule were to be found later as sipahis and za'ims, as disdiers of fortresses and higher functionaries. The importance attached to Bosnia as a frontier land favoured the rise to influence and power of the native Muslims. True, after the break-through of the Turkish armies and the invasion of areas under Hungarian rule, a great many sipahis were ordered to settle in newly conquered regions, yet this was not followed by the same consequences as in Serbia where the process of islamisation virtually stopped with the Turkish invasion of Hungary. In Bosnia and Herzegovina islamisation had resulted in the creation of a broad basis of Muslims recruited not only from the townspeople but also from the peasantry.

The creation of conditions necessary for the development of town communities in Bosnia—particularly those of mining centres—had begun during the period preceding the Turkish conquest. After the establishment of Turkish rule, Bosnian towns began to develop and grow. Turkish craftsmanship, particularly the handicraft characteristic of the Near East, was far advanced as compared with the craftsmanship of the earlier Bosnian period. Consequently, handicrafts and trade guilds of an oriental type developed greatly over the first two centuries of Turkish reign in Bosnia and Herzegovina. Great progress was made in trades related to the manufacture of leather, in goldsmiths' work, and in crafts connected with the production of military equipment and of goods required by townsmen. On the other hand, the Ottoman mining industry was less developed than in Bosnia or Serbia where Saxon settlers had introduced their mining technique and rules.

Owing to the introduction, by the Turkish authorities, of bureaucratic administrative measures in mining areas which became merged with the Imperial domains (Hâkim), the mining industry suffered a setback in the first century of the Turkish rule, with a consequent falling off in production and, more particularly, in the output of precious metals; the production of iron, however, showed a slight increase. For these reasons, the growth of towns in Bosnia and Herzegovina during the period of Turkish rule was associated—apart from military considerations, which were the most important factor in the siting and building of towns—not with the development of the mining industry but rather with the advancement of crafts and the related trade. The towns built by the Turks were all situated on sites ensuring good communications. Over the second half of the 10/15th century, the islamisation of the old Bosnian mining market-towns proceeded but slowly and was less conducive to their future development than in the case of new towns built by the Turks on the sites of former market-towns. A good instance are the towns of Sarajevo and Banjaluka, among others, which, as the seats of Turkish authorities and military garrisons, expanded and developed into crafts centres and trading settlements. Beside the Muslims, the baptized Serbs, the servants and soldiers, the populations of similar towns continued to grow because of the migration of Muslims from various places who brought in Oriental customs and ways of life. At the beginning however, it was the merchants of Dubrovnik who were the only traders on a large scale.

The building of the most important towns in Bosnia and Herzegovina was due to the initiative of individual governors. It was in and around these towns that governors had their estates, mills, houses, hamams and shops, which they would bequeath and leave, during their lifetime, to religious and charitable endowments (wakf). Thus a great number of mosques, tekiyes and religious schools were built, with libraries adjoining mosques or schools. Dervish orders introduced mystic rites and ceremonies likely to please the urban population. Briefly, the towns of Bosnia became the strongholds of Turkish power and the mainstays of Muslim culture. The towns also had an influence on the countryside and attracted great numbers of peasants and people from rural areas. Most of the migrants were peasants converted to Islam, and the non-Muslims soon became converts as well. Christians and Jews living in towns were few in number from the peasantry.

The earliest Turkish cadastral registers of the sandjak of Bosnia and Herzegovina provide documentary evidence bearing out the contention that the islamisation en masse had its origin in towns and the surrounding country districts. At the beginning of the period, as shown in the records, converted peasants in the sandjak of Bosnia were to be found only around the town of Sarajevo. In 894/1489 there were in the sandjak over 25,000 Christian houses, 1,300 odd Christian widows' houses, and over 4,000 unmarried Christian men, as compared with approximately 4,500 Muslim houses and over 2,300 single Muslims (cf. Başvekâlet arşivi, Tapu deft. no. 24). The earliest cadastral register of the sandjak of Herzegovina for the year 882/1477 (Tapu deft. no. 5) clearly shows—and so do the other cadastral registers—that the islamisation was not instantaneous; nor is there any evidence to prove the assumption that the conquerors had been joined by masses of partisans that belonged to the heretic Church of Bosnia. Only in some mountain villages of Herzegovina, as shown by the registers, were to be found the "devoted believers of the Church of Bosnia" (krstijani); also, some believers of the Church of Bosnia were recorded to have lived in a deserted village in the sandjak of Bosnia, this being the only instance. It would seem that twenty years' persecution of Bosnian heretics during the reigns of King Stjepan Tomáš and King Stjepan Tomasević had broken up the heretic Church of Bosnia; the change-over to Orthodoxy of Herzeg Stjepan Vukčić must also have had its share in weakening the position of the Bosnian Church in Herzegovina. The Turkish government recognised the Serbian Orthodox Church. Under the Sultan's berât [q.v.], the Orthodox Church enjoyed considerable rights and privileges. The Catholic Church was also granted certain privileges by Mehemmed II the Conqueror. It is evident from data in the cadastral registers that the "devoted believers of the Church of Bosnia" had retired into remote secluded districts of Herzegovina. There is no recorded evidence of any islamisation of those parts of the country or the people at the time. The inference

Encyclopaedia of Islam
could therefore be drawn that the Bosnian heretics in most areas had already been brought into the fold (Orthodox or Catholic), which would exclude the possibility of a general conversion to Islam of the followers of the Church of Bosnia.

However, the probability is that the earlier persecutions on the part of the Catholic Church, combined with the pressure brought to bear by the Orthodox Church, which had the right to collect church-dues, had created conditions favouring the conversion to Islam of the former followers of the Bosnian Church. At all events, the development of towns as centres of Islam, and their influence on the surrounding countryside resulted in a steady spread of Islam among the peasantry of certain areas as early as the 9th/10th century. Thus a foundation was laid for a major Islamisation of the peasantry. The Islamised peasants were given the distinctive name of pasha. Their religion was a mixture of Islamic and other elements, christianised pagan, Christianian and heretical-Christian. It was on these grounds that the Muslim feudatories and religious intelligentsia were inclined not to regard the Muslim peasantry as their equals.

During the reign of Süleyman Kânum measures were taken to check the growing power of the feudal class, which had been completely Islamised by then. Bosnian sipahis were made to move to newly conquered areas, the vacant timârs being made over to sipahis from other districts. Çiftlikts were transformed and made part of reşâyâ lands. It was at this time—and to a greater extent later on—that by graft and bribes a number of courtiers began to acquire estates in Bosnia. However, at the same time concessions had to be made in view of the needs of defence, particularly those of the borderland, and the existence of many devasted areas. Over the second half of the 10th/16th century the number of çiftlikts in possession of feudal lords and army officers continued to grow, particularly in frontier districts. The post of hâpudan (captain), formerly concerned with service on rivers in the borderland, came to be that of an officer in command of forts and defensive works of a district. The native feudal class could always rely on the hâpudan’s office for effectual support. The setting up of the eyalet of Bosnia added greatly to the ever increasing importance of the native nobility.

The second half of the 10th/16th century proved to be a period of rapid growth and development of certain Bosnian towns. There followed a steady rise in the volume of trade with Italian towns by enterprising home traders and Dubrovnik merchants. Being in the majority, the Muslim inhabitants of towns enjoyed certain privileges and lived in special quarters apart from the Christian population. Owing to the influx of newcomers certain guilds closed their doors, hence a migration of Muslim population to places and towns beyond the Sava.

In the second half of the 10th/16th century, the signs of a crisis in the Ottoman general administrative structure became increasingly apparent in the country’s finances. One of its effects was a consid-erable weakening of Turkish military power. This crisis became evident in Bosnia as well. The last military ventures and offensive operations made under the leadership of Hasan Paşa Predojević, the beyler-beyi of Bosnia, ended in the capture of Bihac. In the following year (1002/1693), a Bosnian army led by Hasan Paşa suffered a heavy defeat at Sisak, which brought about the war between the Habsburgs and Turkey.

(b) The period of crisis in the Turkish state and military defeats of the Ottomans

The administrative structure and extent of the eyalet of Bosnia, which took definite shape at the beginning of the 11th/17th century, remained unchanged until about the end of the century. At this time, the governor of the eyalet bore the title of Vizier, and the seat of government was transferred from Banjaluka to Sarajevo in 1049/1639.

The crisis in the economic and financial affairs of the Ottoman Empire and the cracks in the Osmanli structure were also reflected in the conditions that prevailed in Bosnia where disorders were frequent and corruption rife. Owing to financial difficulties and the rising costs of maintaining control over wide areas of the conquered territory, the central government had to extend the system of lease of all public and imperial revenue and to raise the taxes and introduce new ones. The system of lease was extended to include the renting of local rates, and even the incomes from timârs and şâfâmets acquired by courtiers, officials attached to central offices, and by many other prominent men living in the capital. The widespread centralised bureaucratic system, designed to control and check oppression, became a source of corruption, practised by local authorities as well. From the second half of the 10th/16th century on, the financial burdens and exploitation of the reşâyâ (peasantry) increased, the pressure being put on the sheep-raisers of the autonomous districts likewise. The long war (1593-1606) was a constant drain on Turkish resources and manpower, with Bosnia bearing the brunt in her exposed position. Owing to the war there was much unrest and many risings of the Serb people in Herzegovina both during and after the war. Over the first two decades of the 11th/17th century, former rebels from Anatolia were sent to Bosnia as governors and would turn rebels in Bosnia as well; they could always rely for support on a large number of malcontents among the native sipahi class who were embittered because courtiers and those near to central authorities would be given timârs and şâfâmets as a present, thus enabling individuals and local bureaucrats to acquire estates as large as several timârs put together. Turkish governors, whose term of office was rather short, were anxious to amass riches and explored the country for their own profit, as did the officials of the central government sent to investigate malpractices and causes of unrest.

Despite such conditions the native feudal class continued to prosper and grow in strength. The process of transformation of peasant lands into çiftlikts owned by military commanders, sipâhis and wealthier citizens was gaining ground as was alienation of free bağımaskas (inherited possessions) of knez-es (village headmen) and other categories of land. Peasant tenants (~îfâc, kmet) of such çiftlikts were required to deliver one third of a fourth (at a later period a fifth, or a ninth in some instances) of corps to their owners (çiftlik ~îshib-i ard) should the çiftlik happen to be part of a timâr or a şâfâmets, which was usually the case. The system of government by hâpudan was extended and came to be applied in the inland areas of the country, for the central government could not afford the means required for the upkeep of as large an army of mercenaries as was needed.
In the circumstances, kapudans tended to grow overbold and defy orders issued by Pashas. Yielding to the demands of Bosnian sipahıs supported by the Pašha, Sultan Ahmed (1603-1717) issued a firman establishing timarı within rights of family succession (ağābāt), the successors being sons or brothers of the deceased, or else kinsmen living with the family (oğāb).

Changes in land tenure and economic policy mainly affected the Christian peasantry; the land of Muslim peasants was seldom interfered with. Increased taxation and growing exploitation deepened the existing divisions between the two classes of peasantry, hence the frequent flights of Christian peasants over the border and increasing numbers of outlaws (haydut in Turkish), who as highwaymen became a menace to safety on the roads.

The trends of development in agriculture and other branches of national economy, apparent in the earlier period, became more pronounced during the second half of the 10th/16th century and during the 11th/17th century. Mining industry continued to decline and was at its lowest at the end of the century. The towns grew and developed during the second half of the 16th and the first half of the 17th centuries as a result of the expanding trade and commerce. The opening of the port at Split (1592), a rival to the port of Dubrovnik, proved an event of great importance to Bosnian trade. The town guilds came under the exclusive control of the janissaries, and this led to the further transformation of guilds into closed organisations. Town notables (a'ydn, q.v.) and powerful ağhas made their appearance in growing numbers. However, part of the inhabitants of towns were Christians, some of whom were craftsmen and tradesmen. Following the increasing migration of country people into towns the tax on abandoned land was very increased. Over the second half of the 10th/16th and the first half of the 11th/17th centuries, some of the towns grew both in extent and importance, particularly the town of Sarajevo. The amassed money-capital, however, served to advance the practices of usury. Besides the prosperous Muslim class, there were in towns certain Christian families of rich traders and merchants—Christians usurers. The urban social pattern showed a marked tendency towards a sharper division between the wealthier, politically influential class and the lower class of the urban poor. In the 11th/17th century there occurred several serious outbreaks of disorder and rioting among the poor of Sarajevo, largely Muslim.

While in the first half of the 11th/17th century the Thirty Years War in Europe prevented any major military undertaking against the Turk, in the second half of the century two long wars caused much suffering and lowered the standard of living conditions and the economy of the eyalet of Bosnia. The war against Venice (1644-1669) and the shorter war against the Habsburgs (1653-1664) were waged in areas belonging to the eyalet of Bosnia, where frequent incursions took place. The consequent flights of Christian population across the frontier resulted in the enlistment of many of the fugitives, called uskoci, in the military service of Venice. In Herzegovina also there was unrest and risings of the people. After the wars there followed a 14-year period of welcome peace, which on the whole resulted in consolidation of Turkish power. The attack on Vienna started the new war with the Holy Alliance which was to last a long time (1683-1699). For once the Bosnian territory south of the Sava escaped being the main scene of the operations, but a Bosnian army had to take part in the war and defend the frontiers. Austrian troops temporarily occupied some districts south of the Sava (1688), and nine years later Prince Eugene, after the battle of Senta, advanced as far as Sarajevo, burning it down in 1109/1697. The Christian population, particularly the Roman Catholics, migrated and retreated with the invading armies. The long wars left an epidemic of plague in their train.

Under the terms of the peace-treaty of Kазlovec (1110/1699) the eyalet of Bosnia retained, with minor changes, the present frontiers of Bosnia and Herzegovina on the north and west. However, on these frontiers new fortifications began to be built and the old ones repaired; more “kapudanships” were established. The eyalet now consisted of five sanjaqs (Bosnia, Herzegovina, Klis, Vornik and Bihac), the last being abolished soon after. It was at this time that the residence of the Bosnian vizier was transferred from Sarajevo to Travnik.

Muslim refugees from the ceded areas of Hungary, Slavonia, Croatia and Dalmatia came to settle in Bosnia on lands abandoned or sparsely populated, which they were allowed to hold as çiftliks. The new settlers were embittered against the Christian Powers and the insurgents, which added to the division and differences between Muslims and Christians. A number of settlers came to stay in towns, for the most part tradesmen, craftsmen and soldiers.

The exposed position of the eyalet of Bosnia called for great efforts on the part of the Muslim population. Under the peace-treaty of Požarevac (1130/1718) Austria was given a belt of territory south of the Sava, and some areas around the western frontier were also lost to Austria and Venice. Despite the ravages wrought by the plague coupled with a succession of bad harvests and heavy loss of life suffered by Bosnian sipahıs, a Bosnian army led by Hekim-oghlu ‘Ali Paša gained a decisive victory over the Austrians at Banjaluka in 1150/1737. The treaty of Belgrade (1152/1739) deprived Austria of all the territories held under the treaty of Požarevac, except for the castle of rich traders and merchants—Christians usurers. Bosnian feudal nobility and Muslims in general had by now lost confidence in the power of the Empire. The arrival of janissaries from the abandoned regions strengthened the privileged position of certain towns, particularly that of Sarajevo, which were now granted virtual autonomy, the greatest power being yielded by municipal a’ydn and military commanders (“bajaks”) with kapudans. These dignitaries came to be the main representatives of political power. In the time of ‘Ali Paša a Council of a’ydn was set up, composed of municipal a’ydn, kapudans and men of note from different parts of the eyalet. The Council was meant to exercise control over the vizier himself and was given powers to determine certain vizier’s incomes.

Sprung from this privileged class, the new native Muslim nobility was founded on the subjection of peasantry and depended on further extension of villainage. Beys and ağhas as land and çiftlik lords took over or seized new çiftliks, causing peasants from stock-rearing districts to settle on deserted land, and generally acting independently of the central authority. Kapudans usurped the powers and functions of officers of state, renting the state’s revenue, taking over çiftliks, and acquiring property by every means. Certain families of kapudans recorded in the first decades of the 12th/18th century
had reached a high position in society by the end of the century.

In order to acquire riches and indemnify themselves for taxes paid and bribes offered to obtain the appointment to the office, viziers of Bosnia would raise the rate of taxation and impose new rates, taxes and other dues. Indeed, immediate delivery of certain goods was often demanded as advance payment for taxes 6-9 months before they were to fall due. This provoked a series of revolts and risings of poor citizens and Muslim peasantry over a period of ten years about the middle of the 12th/18th century.

Such circumstances had an adverse effect on trade in town and country alike. The prevailing conditions acted as a serious set-back to economic growth of the country.

In the war between Austria and Turkey (1788-1791) the responsibility for the defence of the frontier districts rested with the Bosnian forces. Apart from capturing certain frontier castles (1788-1790) the Austrian armies had but few successes. Under the terms of the peace-treaty of Svishtov (1791) Turkey surrendered a little part of her territory, and Austria evacuated the captured frontier castles.

At the beginning of the 13th/end of 18th century Sultan Selim III introduced a series of reforms and measures largely designed to curb the power of janissaries. The policy of the proposed reforms ran counter to the established foundations and prevailing influence of Muslim nobility and the privileged position of Muslim population of towns in the Bosnian eydlet.

(c) The Period of Reforms in Turkey and Risings in Bosnia.

The new Turkish reforms could not but be met with indignation by Bosnian Muslims, interfering as they did with the established military structure and being directed against the janissaries and the sipahis army. In several campaigns against the insurgents in Serbia, Bosnian boys, aghas and the urban population took part in large numbers; however, the Bosnian army suffered a heavy defeat at Mişar (1806). A short time after, several risings of Serb peasantry occurred in Bosnia but were soon put down. Far greater efforts were needed for the final suppression of the rebellion of the Drobnjaks in Herzegovina. Bosnian Muslims also took part in the suppression of the rising in Serbia in 1813.

The transit trade improved during the period of Napoleonic continental blockade. Bosnian roads were chiefly used at the time for the transport of cotton, undertaken by Serbian and Jewish traders, many of whom grew rich in consequence. Muslim tradesmen in towns were dependent for their prosperity on the preservation of privileges and special rights. Sarajevo, the most important town, had acquired a large measure of independence in regard to viziers; there were frequent cases of serious differences and quarrels between the citizens and the vizier, which at times led to armed resistance. With the appointment and arrival of Djalal al-Din Pasha in 1820 law and order was restored at a great sacrifice of life. The abolition of the order of Janisaries was the cause of another rising of the people, particularly in Sarajevo, which was suppressed by 'Abd al-Rahmân Pasha. The general dissatisfaction and resistance to the reforms continued none the less. In 1846/1837, when attempts were made to carry the reforms into effect and reorganise the army, a rebellion broke out headed by Bosnian Muslim nobles under the leadership of Husayn-kapudan Gradaščević. The insurgents demanded complete autonomy for Bosnia and Herzegovina and the right to elect their own vizier; Bosnia had to pay a yearly tribute to the Sultan. The demands, if met, would have safeguarded the privileges of the nobility and the existing military structure. However, at the very start of the conflict the kapudans of Herzegovina, led by 'Ali Ağa Rizvanbegović, separated themselves from the movement. Despite the victory of Husayn-kapudan over the imperial troops and of the understanding reached with the Grand Vizier, the initial great successes soon came to nothing because of personal ambitions of the leader (elected to the viziership in the early part of Dirhamad 1 1247/8-17 October 1831) and the rivalry between Bosnian leaders. The insurrection was put down (1832) and Herzegovina proclaimed a paşalîk to be governed by 'Ali Paša Rizvanbegović (1833).

After the suppression of the insurrection the hereditary kapudanîlks were abolished (1835) and replaced by müseâlimîlks. Many former kapudans, a'yân, and sipahis as well (after the abolition of their order) were appointed müseâlims and given posts of commanders. The iron hand in a velvet glove was the means used by the Ottoman Porte in dealing with Bosnian nobles and stubborn malcontents. Nevertheless, the conflicts still continued, particularly between the citizens of Sarajevo and the viziers. The resistance was finally broken by 'Umar Paša Latas, a former Austrian petty-officer, born in Lika (Croatia). Sent to Bosnia (1850-1852) with special powers at the head of considerable forces, 'Umar Paša succeeded in breaking the great political influence of Bosnian nobility and carrying the reforms into effect. He had 'Ali Paša put to death, and abolished the paşalîk of Herzegovina. Bosnia was divided into six kârimâbîlîlks and Herzegovina into three kârimâbîlîlks. The town of Sarajevo became the official residence of the vizier.

Further reforms were made in the administration of the eydlette of Bosnia during the tenure of office of the Vizier Topal 'Othmân Paşa (1861-1869). The country was divided into seven sandjaklaks. The wilâyet Council was set up in 1866—an advisory body of representatives, on denominational basis. A start was made with modernisation of living conditions, health service and communications (the first railway—Banjaluka-Novi—was opened in 1872). In the sixties of the century the wilâyet printing-office was set up and a number of schools opened.

The reforms and measures taken favoured the development of certain branches of national economy. Commerce and trade improved, but the guilds were endangered owing to the development of the market. Many urban Serb families rose to prosperity and, as a result, the influence of Serbian citizens began to make itself felt in rural districts.

Yet the reforms were not far-reaching enough to deal with the essence of agrarian structure and its problems. With the abolition of the order of sipahîs the *uşır (tithe) was made a tax of the state, and to indemnify the sipahîs for loss of income a pension scheme was introduced in lieu of the rents. However, to recoup themselves for their losses, the sipahîs proceeded to convert into sipahîs the remaining peasant free-holdings. By the middle of the 19th century the process had been completed; thus feudal land-tenure and tenantry came to be
associated with Christian peasants, for the Muslim peasantry had remained in possession of their tiftiks. The burden of heavy taxation was meant to be borne largely by the peasant. Moreover, the amount of rates and other dues exacted from the kmets (tenants) was not fixed but collected arbitrarily. Such conditions were a cause of general discontent among the peasantry, and provoked frequent rebellions.

Tahir Pašha, Vizier of Bosnia, undertook (in 1848) to settle the agrarian question. Under his new scheme, tiftik owners were to collect a third part of the annual crop, and forced labour was to be abolished except in Herzegovina, where the kmets were allowed to hand over less than a third of the crop. Certain obligations of the tiftik owner in the district of Sarajevo, e.g., to provide his kmets with seeds, ozen and dwellings, were to apply to all Bosnian districts. However, tiftik owners proceeded to collect the third of the crop everywhere, insisted on forced labour and failed to perform their own obligations. This caused much discontent among the peasants; nor were the tiftik owners satisfied. Several unsuccessful attempts had to be made before the question was finally settled—after the passing of the Agrarian Act (during the Ramadan of 1274)—by decree proclaimed in the month of Safar 1276/September 1859, enacting the customary practices in regard to kmets. No provision was made, however, for a uniform system of taxation and other dues applicable to the whole of Bosnia and Herzegovina. The regulations of the decree in regard to this system of land-tenure remained in force until 1918.

The unsatisfactory conditions gave rise to a series of peasant risings about the middle of the 19th century. The great rising of 1875, when masses of Christian peasants, kmets of agbas and beys, joined hands, was given a political colouring by the participation of the Serbian town population, particularly following the entry of Serbia and Montenegro into war against Turkey. True, the rising in Herzegovina was a mass movement, while in Bosnia it was only the frontier districts that were involved. The rising called forth the intervention of the Great Powers. The Treaty of San Stefano, Turkey should grant autonomy to Bosnia and Herzegovina. However, Bosnia was unwilling to take sides after the withdrawal of Turkish authorities and the army—and incited the people to rise against the invader should grant autonomy to Bosnia and Herzegovina. Under the terms of the Congress of Berlin, Bosnia and Herzegovina was mandated to Austria-Hungary. The Austro-Hungarian troops sent to occupy the country met with unexpected resistance from Bosnian Muslims. The rebels were led by men of the lower classes—since prominent Bosnians were unwilling to take sides after the withdrawal of Turkish authorities and the army—who incited the people to rise against the invaders and set up a government of the people in Sarajevo. The occupation began on July 29th and was completed on October 20th, 1876. Drastic measures were taken to break down the strong resistance offered at some places, particularly around and in the town of Sarajevo.

Bibliography: Historical studies relating to the period of Turkish rule in Bosnia and Herzegovina are far from being complete though much progress has been made of late. Most of the relevant historical material dealing with the period has not yet been published. The collecting and editing of the material is in charge of the Oriental Institute of Sarajevo. For the early years of the period of particular importance are the Turkish cadastral registers (with kuman-namas), kept in the Bajvekale arşivi in Istanbul, wakfi-namas (reported on by F. Spaho, H. Kreševljaković, G. Elezović, H. Šabanović, and others), and documents stored in the archives Glasnik Zem. Bosnij i Hercegovine and others; also important are the hadji sigils of the 17th century with fragmentary records from the 16th century, and public records material (Oriental Institute, Khusrwe-bey Library, etc.). Some public records of the vilayet of Bosnia (from the middle of the 19th century) are kept in the Oriental Institute of Sarajevo. Valuable information concerning the latter part of the period is to be found in the unpublished chronicle entitled Ta'rikh-i Diyar-i Bosna, written by Zâlih Şidki Ef. Hadžihuseinović, known by the name of Muweĉkit, at the second half of the 19th century, the autograph of which is kept in the Oriental Institute of Sarajevo.

The more important collections of sources are the following: C. Truhelka, Tursko-slovjenski spomenici dubrovacke arhive, Glasnik Zem. Bosnija i Hercegovina 1911; H. Šabanović, Najstarije vukun name u Bosni, Prilozi za orijentalnu filologiju, ii (1951), iii-iv (1952); Monumenta Turcica historiam Slavorum Mer. illustrantia, I, Kanuni i kanun-name, Vol. i (edited by Oriental Inst. of Sarajevo), Sarajevo 1937; J. Matazović, Fojnička regesta, Spomenik Srpske Akademije Nauka, lxii (1930); inscriptions in oriental languages discovered in Bosnia have been published by M. Mujev佐ivić, in Prilozi za orijentalnu filologiju, i (1951), ii (1952-53), and others. Among the more important travel-books containing valuable information and data are those by Kurpišić (1530) and Ewlija Celebi from the middle of the 17th century. The sources concerning the beginning of the Rising in 1875 have been published by H. Hadžibegić, Turski dokumenti o početku ustanaka u Hercegovini i Bosni 1875, Prilozi za orijentalnu filologiju, i (1950).

General histories of Bosnia: S. Bašagić, Kraka upula u prošlost Bosne i Hercegovine, Sarajevo 1900; M. Prelog, Posijest Bosne doba osmanlijske vlade, i-i, Sarajevo 1912-1913. Others are out of date. V. Ćorić, Historija Bosne i, Belgrade 1940 (published first book only, to 1482); Istorija naroda Jugoslavije, i, Belgrade 1953, 574-576 (to 1482 also). An outline of the history of Bosnia and Herzegovina under Turkish rule is to be found in Istorija naroda Jugoslavije, Book ii (in print); the 15th, 16th and 17th centuries are by N. Filipović, the 18th century by H. Kreševljaković, and the history of culture by H. Šabanović. Unpublished Turkish historical material has been used, particularly cadastral registers, and references given concerning sources and bibliography.

Monographs and treatises: H. Šabanović, Pitanje turske vlasti u Bosni do pohoda Mehmeda II 1453 god., Godišnjak 1. društva Bosne i Hercegovine u Sarajevu (1956); H. Šabanović, Bosanski pašaluk do kraja XVII vijeka—postanak i upravna podjela (dissertation in print); H. Kreševljaković, Kapetanije u Bosni i Hercegovini, Sarajevo 1957; M. Handžić, Poljega na sudstvo u Bosni i Hercegovini za vrijeme turske vlasti, Sarajevo 1940; C. Truhelka, Historička podloga agrarnog pitanja u Bosni i Hercegovini u XVII vijeku, Sarajevo 1925; V. Cubrilović, Poroklo muških plemenstva u Bosni, Jug. než. časopis I (1935); M. Handžić, Islamizacija Bosne i Herce
The most lasting traces of the influence of Islamic culture are the elements of oriental culture—in towns—as in the other provinces of the Ottoman Empire. The mainstays of Islamic culture in Bosnia and Herzegovina were town settlements, for the manifest features of the culture were predominantly urban in scope and character. The way of living of the Muslims in this period are less monumental in appearance except for a few edifices erected by Governor-Generals or some high Turkish dignitaries, as for example the Hadži-Sinan's Tekije (1640) in Sarajevo. The architecture of the third period shows signs of decadence and, towards the latter part, of the penetration of European ideas as well as imitation of styles prevalent in the towns of Turkey. There are also signs of direct influences. The period nevertheless has produced many interesting examples of technical ingenuity. The development of the town of Travnik, as the official residence of the Vizier, is typical of the period.

The Suleymaniyya mosque (the present building—dating from 1816) has been constructed over a bezistan. A number of ancient mosques were restored during this period. In the construction of monumental public buildings the Islamic architects displayed the fundamental features of the Ottoman artistry, though not all of the latter's forms and characteristics found expression in Bosnia and Herzegovina. Smaller mosques and public buildings, as well as dwelling-houses were built by native master builders, hence certain individual features of this style of architecture. In the post-Turkish period the examples of Islamic architecture show unmistakable signs of decadence. The Austro-Hungarian Governments attempted to develop the characteristics of Islamic architectural art by copying the Moorish style. The buildings in this style contrasted with both the earlier examples of Islamic architecture in Bosnia and Herzegovina and those of the latter period of the Austrian rule, besides being in disharmony with Bosnian inland scenery and unsuited to climatic conditions. Buildings in this style proved a failure. The most representative example of this style is the Sarajevo Town Hall. The Bosnian and Herzegovian style of architecture, as applied to dwelling-houses, held its own a while longer before it finally disappeared.

A very large number of words and idioms of Turkish, Arabic and Persian origin are in everyday use in Bosnia and Herzegovina, and to a greater extent than in other areas where Serbo-Croat is spoken. The early literary style also made full use of such borrowings. With the development and
under the influence of standard Serbo-Croat, since 1878, and more so since 1918, words and phrases of Turkish origin have been falling out of use in everyday speech. During the period of Turkish rule a cursive Cyrillic alphabet was in use in private correspondence among Bosnian and Herzegovinian Muslims, particularly among native Muslim nobles. Arabic characters were used in the writing of Serbo-Croat literary texts done by Bosnian and Herzegovinian Muslims. The same characters were used in certain Serbo-Croat religious texts written during the period of Austrian rule and that of pre-war Yugoslavia. Some religious books printed in these characters are still available. The orthography was rather arbitrary at first but gradually became standardised. Since 1930 however, the characters have hardly ever been used even in religious texts.

No comprehensive study has so far been made of the literary production, in Serbo-Croat or oriental languages, of Bosnian or Herzegovinian Muslims.

In their devotion to folk-songs and popular poetry the Muslims of Bosnia and Herzegovina differed little from their Christian compatriots. The earlier epic compositions of Bosnian and Herzegovinian *guslars* have all the basic characteristics of traditional Serbo-Croat epic poems. The difference merely lies in a different religious and political attitude; a more frequent use of Turkish idioms, and a tendency away from heroic poems towards ballads. *Hasanaginica*, a popular Bosnian poem, is well known in the world of literature. Popular epic poems of the earlier type are preserved in the south of Bosnia and Herzegovina. A later type of popular Muslim epic poetry developed among the people of a western frontier district called Krajina. Such poems were recited with a *tamburica* (mandolin) accompaniment, and differed in several respects from the popular poems of the *guslars*. Popular lyrics of Bosnian and Herzegovinian Muslims, when compared with those of their compatriots, likewise show—and to a higher degree—a number of characteristic features of their own. The most familiar and popular among these are the love poems called *sendalinkas*. Apart from oriental influences of language, motifs, and music apparent in their composition, the *sendalinkas* are essentially typical poems of Bosnian and Herzegovinian Muslims, liked and enjoyed throughout Yugoslavia.

Judging by the results of studies published so far, those Bosnian and Herzegovinian Muslim poets who wrote in oriental languages did so mainly in Turkish, to a lesser extent in Persian, and in a few instances in Arabic. Among Turkish writers, there were several of Bosnian origin, some of whom were noted poets, as for example Derwish Pasha, son of Bâyazid Agha (killed in 1022/1613), born in Mostar (Herzegovina), and the well-known stylist Mehmed Nergisi (died 1044/1634), born in Sarajevo. Not only were they born in Bosnia and Herzegovina but also held office for rather a long time, the former as Pasha of Bosnia and the latter as Mûderris and Kadi. Likewise of Bosnian origin was Ahmed Südf (died 1005/1596-7), the well-known commentator on the Persian classics. One of the most copious writers of poetry in the Persian language, who also wrote in Turkish, was the sheykh Fewzî of Mostar (died about 1160/1747). Ahmed Wahdet (died 1007/1598-9) of Dobrun near Visegrad, as well as some other poets of Bosnian origin, devoted himself to Muslim orthodoxy. Hasan Kâzî of Sarajevo (died 1103/1694-5) and Uksin of Bosnjev, also called Havâyi (died about 1061/1650-1), born in Tuzla Donja, as well as a number of other

Bosnian and Herzegovinian poets, wrote both in Turkish and Serbo-Croat. The latter compiled a Serbo-Croat dictionary written in Turkish verse. In the 13th and 14th and 15th centuries up to the present time there were a number of poets who wrote religious poems in the spirit of old traditions. Of this poetry worthy of note are the poets in praise of the birth of Muhammad (mewlud), the compositions of the early period being mere versions imitative of the Turkish texts, latterly followed by some original writings.

The early prose of the Muslim writers of Bosnia and Herzegovina mostly in Arabic, is largely concerned with Islamic theological subjects, *shari'a* laws, State administration, and history. Many of the writers, natives of Bosnia and Herzegovina, lived and worked in Istanbul and other parts of the Ottoman Empire, as for example Abd Allah Bosnevi—died in 1054/1644—a writer of mystical-philosophical tracts and commentator on the *Fusus al-Hikam* by Ibn al-Arâbî. Noted as a writer on law and politics was Hasan Kâfî, born in Prusac (Akhisar), whose literary merit gained him a lifetime *ködilik* in his native place, where he died in 1025/1616. In addition to his other writings, Kâfî was the author of the well-known work *Nisâm al-‘Îâm*. As many as forty authors might be mentioned who were active in the field of religious and law studied during the Bosnian and Herzeogvina literary period. A number of well-known Ottoman historians were descended from Bosnian Muslim families (e.g., Ibrâhîm Pećevi); however, the historiography in the Turkish language in Bosnia and Herzegovina is of a later growth. A noted Bosnian historiographer of the 12th/18th century, who wrote in Turkish, was the kâzł Umar of Novi, the author of *Gilâme-i Hekim-OGlu* (*Ali-pasha*), a work dealing with historical events in Bosnia from the beginning of Muharram 1149/1736 to the end of Djuamaddâ I of 1152/1739. The first printing of the work was done by Ibrâhîm Mütferferî (1154/1741); it was later reprinted and translated into English and German. During the transitional period between the end of the 12th/18th and the beginning of the 17th/19th centuries, a few prominent chroniclers (Mu斯塔fa Bahşeshi, Sâîlî Şidîkl) are on record, who wrote accounts of contemporary events. Among the historians dealing with the latter period of Turkish rule and the events following the Austrian occupation of the country are the following: Sâîlî Şidîkl Ef. Hadžihsenović (died 1305/1888), Muhammed-Enveri Kadić (1274/1852-1349/1931), a collector of historical material which he transcribed himself (28 books—a copy of the manuscript is housed in the Ghâzî Khursrew-bey Library, Sarajevo). The transition from the old historiography to be noted in the work of the sheykh Sejîf al-Dîn Ef. Kemura (died 1335/1917). Likewise, certain characteristics of the earlier Islamic studies and some conceptions of the earlier historiography are also manifest in the works of Dr. Salvet bey Bašagić (1870-1934), the first modern historian of the Turkish period and the first oriental scholar in Bosnia and Herzegovina, who was a poet as well.

However, since 1878, and particularly since 1918, the literary activities of Bosnian Muslims—apart from the romantic school of thought which still clings to earlier beliefs (with Dr. S. Bašagić as the outstanding representative)—have tended more and more to become merged into Serbian and other literatures. A. F. Džabić (died 1918), mufti of Mostar and fighter for religious autonomy, attained
prominence in Turkey as professor of Arabic language and literature. He also brought out a collection of choice poems of Muhammad's contemporaries.

The nurseries of Islamic education and culture in Bosnia and Herzegovina, as in every Turkish province, were the mektebs and medreses and religious institutions (mosques, tekkiye, and the like). As a rule adjacent to mosques, the mektebs provided primary education mainly consisting of instruction in the reading of the Kur'an, writing and basic religious principles. Medreses, the secondary and higher schools, were also set up on the Turkish model. The earliest medrese on record in Sarajevo dates from the first quarter of the 10th/beginning of the 10th century. By the waqf name of 943/1537 the Ghazi Khusrew-bey Medrese with its own Library was founded by Ghazi Khusrew-bey, the sanduk-beyi of Bosnia. The building was completed in the following year and is still standing opposite the entrance gate to the harem of the Khusrew-bey Mosque. The Medresa Library has since been made into an independent public institution of Ghazi Khusrew-bay's waqf, which has helped to extend its scope. The present inventory comprises the original stock of volumes, in oriental languages as well as a large number of additional copies, manuscripts and Turkish documents acquired, as well as ninety-two schools of the reformed type (mekteb-i ittiddi). The rushdiyyes were founded in 1892 as a training college for Muslim pupils of the State grammar school. Church of Sarajevo the responsibility for educational services and the training college. Muslim pupils of the State grammar school of Sarajevo had the choice of being taught Classical Greek or Arabic.

In the new Yugoslavia religious bodies and societies are separated from the State, but the latter may render assistance to religious communities. Religious instruction may be given only in the immediate vicinity of places of worship (under the provisions of the Religious Communities Act of 1953); however, the religious communities are free to open schools for the training of religious functionaries and staff. The mektebs' attendance at which was considered compulsory for Muslims by the Islamic religious community, were in existence until 1952, when they were abolished in the whole of Bosnia and Herzegovina.

During the Austro-Hungarian administration and in pre-war Yugoslavia, the study of Islamic branches of knowledge concerned with religion and oriental languages was closely associated with the activities of the above mentioned schools and colleges. At the same time, the Zemaljski Muzej of Sarajevo was engaged in collecting oriental manuscripts and records from Turkish archives. Among the staff of the museum there were a number of workers who had studied oriental literary and historical records. It was here that conditions were created for the development of modern scientific studies and work...
4. The Islamic religious community in Bosnia and Herzegovina since 1878.

The Sultan’s sovereign rights over Bosnia and Herzegovina were recognised until 1908, when the province was annexed by Austria-Hungary. Nevertheless, the position of Bosnia and Herzegovina within the Dual Monarchy remained undefined, largely because of the dualist constitution of Austria-Hungary.

Bosnia and Herzegovina were under a dual control exercised by the Austro-Hungarian Ministry of Finance, both before and after the annexation. Each of the two powers had definite rights regarding administrative policy, the building of railways and matters concerned with the country’s trade and finances.

The Austro-Hungarian system of government in Bosnia and Herzegovina was bureaucratic and police-ridden throughout the period. A military commander was responsible for the government, the number of departments being four, and later six. A Governor’s “civil adlatus”, was appointed in 1882, who was in effective control of the Civil Service. For administrative purposes the country was divided into six okrugs (departments)—Banjaluka, Bihac, Mostar, Sarajevo, Travnik, and Tuzla—and these in turn into srez-es (districts) and spostanas (the smallest administrative units). Only in 1906—the administration of justice was separated from the government of the country. Following the annexation, a Constitution with a “Sabor” (Assembly) was granted in 1910. The Sabor consisted of seventy-two deputies and twenty appointed (ex officio) members, the latter being partly religious representatives (among Muslims: the reis al-‘ulama”), the Director of waibf Administration, and three muftis), and partly high officials. The deputies were elected to three “curiae” according to their ranks, the first of which was of two classes, the Muslim owners of large estates belonging to the first. The curiae were organised by electoral districts on a denominational basis. The constitution restricted within narrow limits the powers of the assembly in respect of the Government, at the same time imposing restrictions on the authority of the latter in respect of the Austro-Hungarian Ministry of Finance.

In 1912 the Governor was given additional powers concerning the Civil Service. The Assembly was adjourned and did not sit during the World War I.

Despite the fact that the Austro-Hungarian government introduced a modern system of administration, developed trade (and mining and timber industries in particular), built roads, railways, and established schools and a number of scientific institutions, the framework of society remained in many respects unchanged. True, the Austro-Hungarian authorities were by this means able to win over to their side the greater part of the Muslim nobility, yet the unsolved agrarian question led to the stagnation of agriculture and told heavily upon the peasantry and in particular upon the kmeti (mostly Orthodox Christians). Nor was the agrarian problem brought about any nearer by the passing of the Facultative Redemption of Land Act, 1911, whereby only minor changes were effected in the existing relations.

From 1882 to 1903 the leading rôle in the direction of Austro-Hungarian policy in Bosnia and Herzegovina was played by B. Kallay, the minister of finances of the Dual Monarchy, otherwise a well-
known historian. In order to keep Bosnia and Herzegovina as a corpus separatum within the Dual Monarchy and to check the spread of Serbian and Croatian nationalism, Kallay attempted to create a "Bosnian nation" and a "Bosnian language". This policy, however, failed to attract a sufficient number of partisans among the native population, for the Serbs and Croats had become nationally conscious, and the nationally "undeclared" majority of the Muslims looked on Turkey as their mother country. Moreover, many Muslim families had settled in Turkey and Muslim leaders had always stressed the sovereign rights of the Ottoman Sultan over Bosnia and Herzegovina. Only a small part of the Muslim intellectuals and landowners adopted the cause of "Bosnian nationalism".

The Serbian political movement directed its main efforts towards achieving autonomy in Church matters and freedom to conduct Serbian community schools. The idea found supporters among the great mass of the Serbian population and the new-born intelligentsia, but it was the Serb gazdas (moneymen) who thrust themselves forward as leaders. There was general discontent among the latter because their usurious trade practices were obstructed by the predominance of Austro-Hungarian moneymen interests and trade capital. The efforts of the movement proved successful, and autonomy was granted in matters of religion and denominational instruction in 1905.

Muslim opinion became increasingly suspicious of certain measures taken by the Austro-Hungarian authorities. In order to gain control over Muslim religious institutions, the Government, in 1882, created the office of re'is al-'ulema, the supreme religious head of Bosn-Herzegovinian Muslims, as well as the highest religious authoritative body (ulema medlis) presided over by the re'is al-'ulema with four members. This organisation went so far as to control the rights of the Wakf Board. Dissatisfied and alarmed, the Muslims presented a petition to the Emperor (in 1886) asking to be granted autonomy in matters concerning the administration of the wakfs. A resolute struggle for the achievement of autonomy, religious and educational, for all Muslims in Bosnia and Herzegovina began in 1899 under the leadership of A. F. Džabić, the mufti of Mostar. The struggle became linked with the Orthodox (Serb) movement. Džabić insisted on demanding maximum concessions but was outvoted. In 1900 a draft statute for the Islamic religious community was transferred to Belgrade; whereas a special emphasis was placed on the Sultan’s sovereignty over Bosnia and Herzegovina, a principle which the Austro-Hungarian authorities were unwilling to accept. When Džabić, the mufti of Mostar, left for Istanbul to consult the Sultan, he was forbidden to re-enter Bosnia and Herzegovina. From 1906 onward the movement took a more organised and definite shape. An Executive Committee of the Muslim people’s organisation was elected, presided over by Ali Bey Firduş. While championing the interests of the propriated classes, the organisation at the same time entered into negotiations with the Government for the granting of religious autonomy. The negotiations hung fire, for the Austro-Hungarian authorities refused to lend an ear to the slightest hint about the Sultan’s sovereign rights over Bosnia and Herzegovina. Following the annexation, the negotiations were brought to a satisfactory conclusion with the Emperor’s sanction of the Statute concerning Autonomous Government of Moslem Religious Affairs in Bosnia and Herzegovina Vakf-Medlis. Under the statute the supreme administrative authority as regards wakfs and endowments of schools and mosques consisted in a Vakf-Medlis Assembly (Sabor) consisting of eight nominated (ex officio) members (the re'is al-'ulema, six muftis and the Director of the Vakf Board) and twenty-four members elected by district board committees. The president of the Sabor was the re'is al-'ulema ex officio. The Vakf-Medlis Committee was both the administrative and the executive organ of the Sabor. Other minor bodies of the Vakf-Medlis Board were the district committees, elected by district assemblies, and, among the latter, the đemal assemblies and đemal medlis. The highest religious authority was exercised by the Ulema Medlis, consisting of four members, with the re'is al-'ulema at its head. The re'is and members of the Ulema Medlis were elected by a separate electoral body consisting of six muftis and 24 elected members. Three (elected) candidates for the post of re'is were submitted by electoral body to the Emperor, one of whom was appointed re'is by decree. The re'is entered upon his duties only after obtaining the authorisation (mengšara) for the performance of religious duties from the sheykh al-Islām of Istanbul. The relevant petition had to be conveyed to Istanbul through the Austro-Hungarian Embassy. A vacancy in the Ulema Medlis was filled by appointment, on the part of the joint Ministry of Finance, of one of two elected candidates. Each obrug (department) had its mufti, who was selected by the Government from among candidates submitted by the Ulema Medlis. The salaries of higher religious functionaries and civil servants came from the provincial budget. The statute also settled the question of Muslim denominational schools, as well as the rights of religious functionaries in respect of sharfa judges.

With the incorporation of Bosnia and Herzegovina into Yugoslavia the question of the Islamic religious community was in the forefront again. Moreover, there were Muslims in Yugoslavia outside of Bosnia and Herzegovina. However, the statute of 1909 remained in force in Bosnia and Herzegovina until 1930. There was a separate Muslim religious organisation covering Serbia, Macedonia and Montenegro. The putting into effect of the agrarian reform hit some Muslim property owners much harder than it did the wakfs in Bosnia and Herzegovina, for most of the latters' property consisted rather of town sites than land in the countryside. Nevertheless, the decentralization of the wakf administration in Bosnia and Herzegovina, as well as disordered financial management and malpractices caused serious damage to wakf property.

Following the abolition of the parliamentary régime in Yugoslavia a law was passed in 1930 concerning the Islamic religious community and its Constitution in the Kingdom of Yugoslavia. Thus the former autonomous Muslim religious communitities were united under one head—the re'is al-'ulema—and one supreme authoritative body composed of the re'is and the two presidents of the Ulema Medlis. The official residence of the re'is al-'ulema and the seat of the Board of the Islamic religious community were transferred to Belgrade; however, there existed, in addition, two Ulema-Medlis and two Vakf-Medlis Councils with their administrative committees, whose central offices were in Sarajevo and Skopje. Lower in authority were the muftis, the district Vakf-Medlis board with
a sharīa judge at its head, and the dīmat-medīlis presided over by the Dīmat lāmām. The main features of the Act and Constitution are to be seen in the fact that the majority of posts were held by appointment, and also, that the office of reʿis al-ʿulemaʿ took precedence of the Ulema-Medīlis. The reʿis was, in fact, the head and symbol of a unified Islamic religious community in the State, while the administration was dual (Sarajevo and Skopje). Special enactments regulated the election of candidates for the post of reʿis, of Ulema-Medīlis members and of muftis. The electoral body was expected to choose three candidates for the office of reʿis, one of whom was then appointed by royal decree on the recommendation of the minister of justice and that of the prime minister. Also nominated by royal decree were the members of the Ulema-Medīlis and the muftis, on the recommendation of the minister of justice.

With the passing of a new law and Constitution in 1936 changes were brought about which, however, did not interfere with the unity expressed by the function of the reʿis or with the dualism of the other governing bodies. The chief organs of the Islamic religious community were now the following: the Dīmat-Medīlis, the District Vakf/Commission, the Ulema-Medīlis in Sarajevo and Skopje, the Vakf-Mearīf Assembly (Sabor) in Sarajevo and Skopje, with the assembly committees, vakf boards, and the reʿis al-ʿulemaʿ with a select or full Council. The official residence of the reʿis was in Sarajevo. The function of mufti was dispensed with. The main feature of the regulations was the selectivity of governing bodies and functionaries. For the election of members to the Ulema-Medīlis each Assembly selected an electoral body of ten members, who in turn formed one electoral body for the election of three reʿis candidates. As before, one of the candidates (usually the one with the majority of votes) was appointed reʿis by royal decree on the recommendation of the minister of justice. It was through this organization that the Yugoslav Muslim Organization, the party led by M. Spaho, secured its position in the religious community.

In the new Yugoslavia, the position and privileges of the Islamic religious community have been safeguarded by provisions made in the Constitution and regulated by the 1953 Law concerning the legal position of the different religious communities. Religious organisations are separated from the State, the holding of religious beliefs being regarded as a private matter. Religious communities may conduct schools for the training of religious functionaries and staff. The State may also lend its aid to religious communities.

The Islamic religious community in Yugoslavia is governed by the provisions of the Constitution of the Islamic religious community in the Federal People's Republic of Yugoslavia, made and passed by the Supreme vakf Assembly in 1947. Some of the regulations have since been changed and others added. The Constitution has effected the unity of the religious organisation of Muslims in Yugoslavia not only through the function of the reʿis al-ʿulemaʿ, but also through the establishment of the Supreme vakf Assembly, allowing at the same time for the federal structure of the State in that separate Ulema-Medīlis and vakf assemblies have been set up in the four republics where Muslims form a considerable part of the population. The supreme authority is vested in the reʿis and four members from the four vakf assemblies. The reʿis al-ʿulemaʿ and the four members of the supreme authority are elected by the Supreme Vakf Assembly (see Yugoslavia).

BOSNA-SARAY [see SARAJEVO]

BOSPHORUS [see BOHáz-içi]

BOSRÁ (Bostra), a town of southern Syria in the fertile plain of the Núkra, in the province of Hawrán (Hauranitidis of the Notitia dignitatum), the Idumea of the Bible. Situated in 32° 30' N., 36° 28' E., and called today Bošra Eski Şam (to distinguish it from Bošra al-Ḥariri on the southern edge of the Lādja), 12½ miles from Ezra, Bošra is 19 miles north of the present frontier of Jordan on the road joining Darʿa on the west to Salkhād on the east. It is close to two intermittent streams, the Wādī Zaydī and the Wādī Butm, tributaries of the Yarmūk. The name Bošra is attested in the sense of 'citadel' (De Vogüé, Inschr. Palm., 25). The town, fortified since its foundation, seems to have been a stronghold towards the north of the 'Arab', i.e. Nabataean, kings. Damascus (Via Isa., § 199), writing in the 6th century, describes it as an ancient fortified town provided with ramparts by the Arab kings. The book of Maccabees (I, v, 26) makes it dependent on the great fortified region of Perea and calls it Bossora. The extensive Nabataean cemeteries which surround it are evidence that it belonged to the kingdom of Nabatene. Two inscriptions from the neighbouring town of Salkhād (Salcha of the Romans) bear, for the eighth decade of the first century, the name of king Malkhū (Malchus of Damascus) (Littmann, Semitic Inschr., in Syria, iv, A, nos. 23 & 28). The use of Nabataean was kept after the Roman conquest (ibid., 12, 102, 103, 106). Certain Nabataean inscriptions include a Greek text.

When Bošra had been introduced into the Roman empire, after the annexation of the old Nabataean kingdom, by Cornelius Palma in 105-6 A.D. (Pauly-Wissowa, s.v. Bostra, ii, 359, 12 f.) it was reorganised on the initiative of Trajan. Writers on Roman history differ as to the date of its foundation. B. Ritter (Erdkunde, xv, 469) sees it as a town of Roman foundation. Damascus assigns to Alexander Severus the honour of incorporating it as a town. The latter did indeed confer on Bostra the title of Colonia Bostra concurrently with that of Nova.
Trajana Alexandrina (222-35 A.D.). Malalas takes its foundation back to Augustus.

It is certain that the town of Bostra was enlarged at the time of its incorporation into the Roman Empire, as a study of its plan shows. Though it remained a stronghold in the 4th century—the most important in the province of Arabia, with Gerasa and Philadelphia 'muros firmitate firmissimae' (Ammianus Marcellinus, xiv, 8.18)—the withdrawal towards the south of the true line of defence made of it no longer simply a garrison town, station of the Third Cyrenaican Legion (Notitia Dignitatum, Ptolemy, v, 17, 7), but an important centre, soon to become Christian, and seat of the government of the province of Arabia under the name of Néa Trajânè Bostra. The Era of Bostra (105 A.D.) testifies to its importance. Thanks to the trade routes which attached it to Philadelphia and the Persian Gulf and those which gave it access to the Mediterranean across Palestine, it was also an important centre of commerce dependent on Damascus, to the north, to which it was joined by two roads. It had extensive markets, of which the ruins subsist; it had its own coinage: that struck by the emperor Philip 'the Arab', who was a native of Bostra, gives to it the title of Metropolis as well as that of Colonia (Butler, Syria, A iv, Bosra, cap. II, xvi, nos. 42, 43). Philip the Arab stationed a squadron of cataphractaries there.

At the time of the first form of the Manichean controversy Titus, bishop of Bostra (about 360), took up (Part, graeca xviii, 1069-1264) a doctrinal position and engaged in activity which placed him in the front rank of the ecclesiastical writers of his time by his knowledge, his philosophical teaching, and his secular activity. Before him Beryllus (222-331), under the influence of Origen, had testified against the heresy by returning to orthodoxy. Byzantine Bostra played the part of a frontier market where Arab caravans and pastoralists alike came to buy provisions under the watch of the troops stationed there.

As an administrative centre Bostra included a large population of functionaries and civic officials. It was the centre of a bishopric subordinate to the patriarchate of Antioch. Anastasius (Butler, op. cit., no. 561) secured the stability of offices there by ridding them of corruption and devoting to them revenues derived from the annona and the grain trade, as also from the 'twelfth'. Romano-Byzantine inscriptions are testimony of the administrative importance of the town. It was the residence of the governor of the Provincia Arabia, who besides the titles of proconsul and dux (Gr. ὑπάρχων and δυσ) bore the military title of scholasticos (488). As a municipium the town had its praeses (prokéfados) and a college of four synarchontes to which was joined a council (bouleutai). For the time when Christianity had not yet triumphed dedicatory inscriptions are to be found to the official Gods of the Empire and to those of Ἰαωράν with their original or Hellennised names (D. Sourdel, Guides du Hauran, Paris 1952). Later, during the Christian epoch, numerous inscriptions mention the reconstruction or restoration of churches dedicated to the Virgin and Sergius or anonymous patron saints, and also of two monasteries of which at least one, dedicated to Saint Cyrilus, was for girls. To judge by funeral inscriptions the population had kept its old Semitic basis, sometimes partially Romanised, with infusions of new blood from Italy, Asia Minor, Corinth, and even (thanks to the transfer of a garrison) from Pannonia. By virtue of its archbishopric Bostra for a long time kept a basilica, of which substantial remnants remain, and a bishop's palace of which nothing much is left. The convent possibly dedicated to Saint Sergius stood not far from there. It had a big church of which the walls and theapse are still standing. It is there that folklore places the sojourn of the monk Bahtr (q.v.), he who, as is well known, was one of the Christian witnesses to the Prophet's mission. (His name, which is still unexplained, may conceal that of Paghurdi attested by a Nabataean inscription from Sallkhād (Littmann, Nabat. 247—and likewise, Bartholomew of Edessa, P.G., 104, 1420.) The Muslim epic legend later made of the taking of this town, 'the first Byzantine centre conquered by the Arabs', a sign of the divine mission of Islam (Pseudo-Wākidi, Kitâb Fudâh al-Shām, Cairo 1954, 16-7).

The Arab conquest and then the establishment of the Umayyad power brought about its decline, in spite of the advantages accruing from its position on the pilgrim route, by depriving it of its status of provincial capital and permanent major frontier garrison. It preserved a certain prestige because of two legends, that of Bahtr and that of the 'kneeling' of the camel bearing the 'Syrian' copy of the Kūr'ān (Nöldeke-Schwally, Gesch. des Korans, ii, 112 ff.). This seems to have made of it the site of a pious folklore which is attested by the accounts of pilgrimages (e.g., al-Harawi, ed. J. Sourdel-Thouvene, 17) and the names of its mosques: al-'Umari (Sauvaget, in Syria, xxii, 41), Fātima, Khādir, al-Mabrak, and the popular tales attaching to them. Numerous inscriptions bear witness to their restoration from the time when the Saljūq princes of Damascus exercised suzerainty over Bostra and devoted themselves to strengthening it against the Fātimids whose possession (in theory) it still was. The spoliation of the town by Abū Ḥānīm's Carmathians had made this needful. The 'Umari mosque, anterior to 128/745 (date of a restoration by 'Uḏmān b. al-Ḥakam, Ar. inscr. Littmann, no. 30), was renovated in 508/1114, then rebuilt in 618/1221 under the Ayyūbids with the supervision of an Egyptian architect. In 526/1326 the mosque and its name were restored by 'Uṯmān ibn-Gūmān. The 'very old' Mabrak mosque had a Ḥānāfī madrasa built beside it in 530/1136 (Sauvaget, in Syria, xxiv, 231).

The Ayyūbīd governors made the town richer by another Ḥānāfī madrasa in 60/1223 (Littmann, op. cit., no. 38). The college mosque known as the 'Dabbāgha' dates from 655/1257. The Mabrak mosque was—and still is—surrounded by a celebrated cemetery which formed a pair with the 'Martyr's cemetery' to the south of the town. Inscriptions attest the construction and restoration at this time of other monuments now lost.

The period of these constructions was that when the town regained under the Ayyūbīds a major importance due to its military rôle, whether in face of the Crusaders or in the course of the conflicts between Saladin's successors. The great witness of this military function is the citadel of Boṣrā. Under the governors representing the Atabeks of Damascus, the old Roman theatre on an esplanade to the south of the town outside the ramparts had been adapted for defence by a wall and three flanking towers. Between 681/1089 and 694/1295 the pites which successively held Boṣrā under their sway enlarged this citadel which ended by becoming one of the chief military monuments of the Muslim world. In
1956 it still remained the most complete authentic document on the successive techniques of fortification from the Fatimid period to the Mamluk. After the Mongol invasion of 659/1261, which left the fortress badly damaged, Baybars sent a mission from Egypt which restored, made even bigger, and strengthened this monument. (A. Abel, La citadelle eyzyn deserialize de Bosra Eski Cham, in Annales archéologiques de Syrie, vi (1956), 95-138, XI pl.). This restoration, by using up a huge quantity of material, no doubt completed the destruction of the old Roman hippodrome which once stood to the south of the theatre. The extensive ruination and depopulation consequent on the brief Mongol invasion seem to have plunged the town once more into obscurity. The restoration of the citadel 'outside the walls' only partially concerned it (al-Makhriz, Hist. des Sultans Mamelukes, tr. Quatremére, i, 141). However, the town enjoyed a certain importance in the 15th century, for it furnished the Mamluk administration in Syria with several notable personages bearing the family name of al-Busrawi. It remained the place through which pilgrims passed on the old Roman road from Damascus to Philadelphia-Amman. Its Birkat al-Hadjji still bears their graffiti.

The development of Egyptian trade by the Red Sea and the fact that the Holy Cities, becoming more and more impoverished, lived principally on Egyptian aid, deprived it, however, of the character of trading centre which it had had originally. The Ottoman invasion and conquest turned it into a minor provincial centre, the exile of obscure functionaries who did not always possess the means to defend the town.

The administrative centre of Hawrân was transferred to Mzeiryb and Merkez in the 10th/11th century.

In the 11th/12th century the 'Anazeh Bedouins, with their flocks, pushed to the edge of Hawrân. The threat of their pillaging expeditions hung over the whole region on dwellers and travellers alike. The pilgrims then adopted the western route by Šanamayn, and Mzeiryb which has remained till today the 'darb al-Hadjji' and alongside which the Hejaz Railway was built at the beginning of the present century.

Today the agricultural centre of Bosrâ earns its living by the cultivation of the fine wheat fields of the Nukra when the rain is sufficient. It enjoys also an excellent water supply which allows the maintenance, in confinement, of a fair number of livestock. It has kept its fine vines and still produces a small quantity of very good wine.

The town is of enormous archeological interest. Since the beginning of the 19th century travellers have been struck by the sight of its Roman ruins and have paused with interest before its gradually crumbling ramparts and its citadel. The Princeton Expedition (1904-5, 1909) published a great number of inscriptions in Greek and Latin (Littmann, David Magie Jr., and Duane Reed Stuart), Nabataean (Littmann), and Arabic (Littmann). The efforts of the members of the Institut Français de Damas and of the Institut Français d'Archéologie de Beyrouth have contributed in Syria, in the publications of the Institut de Damas, and more recently in the Annales Archéologiques de Syrie, to the increase in our knowledge of the town. Restorations, due principally to the work of J. Sauvaget, have been successfully carried out to the ʿUmari mosque. The Syrian Service of Antiquities has made extensive excavations.

The exact study of ancient and medieval hydrological techniques, of the nature of the monuments and their chronological assignment, and, above all, of the successive levels of construction, still remains to be carried out within the framework of a master plan.

(A. Abel)

BOSTANİJ (Bostandji, from Persian bostānān "garden"), the name applied in the old Ottoman State organisation to people employed in the flower and vegetable gardens, as well as in the boathouses and rowing-boats of the Sultans' palaces. As long as the law of daşğûrme (forcible recruiting, [q.v.]) remained in force, these were recruited in accordance with its provisions. The bostândîs formed two independent oğâls [q.v.], of which one was in Istanbul and the other in Edirne (Adrianople), commanded by the bostândî-bashi. Only the strongest and most vigorous of those forcibly recruited were accepted in the two oğâls of the bostândîs, either directly or from the oğâl of the 'ajami-oğâls [q.v.]. There were nine grades in the oğâl of the bostândîs. New recruits were round their waists a belt made of the fringe of State cloth (beylîk), while bostândîs of the highest rank wore a green belt known as mubaddem. After a specified length of service the bostândîs were promoted to the oğâl of the Janissaries. Each man received on promotion the sum of 1,000 akçes for his equipment. At the end of the 17th and in the 18th century there were cases of bostândîs assigned to the mounted oğâl of kapı-bulus [q.v.]. Bostândîs were employed both inside and outside the palace. Others worked directly in flower and vegetable gardens, in boathouses or in connexion with them. There were also bostândîs in Sultans' estates, as, for example, in Amasya, Manisa, Bursa and Izmit. Apart from the services mentioned above, the bostândîs of Istanbul, were entrusted with duties such as guarding the palace, transporting material for the construction of palaces and mosques for the Sultans; working in boats used for the transport of timber from the environs of Izmit (v. Kanunname-i Al-i 'Olmân, ed. Aref Bey, TOEM, appendix 2, 25). Two different classes are shown in the paybooks of
the bostandıls, the "quilmân-i bâšîlet-i hâssa" (boys of private gardens) and "quilmân-i bostandîyan" (garden boys). In a paybook dated 984/1576 those employed in the Sultan's private gardens are shown as 20 böluks [q.v.], and those working in the vegetable gardens as 25 djeimdâats [q.v.]. At that time there were 644 working in the private gardens and 972 in the vegetable gardens. Paybooks for 1152/1739 and 1192/1778, show 20 böluks in the private gardens and 64 djeimdâats in the flower and vegetable gardens outside. Bostandıls were also concerned with keeping order in the places where the gardens in which they were employed were situated. There was a djeimdât in each district, commanded by an officer known as üstâ (master). The üstas performed functions analogous to those of police commanders of the districts. These üstas were appointed from among the four baltadıls [q.v.] of the oğjak of the bostandıls. Terms such as "the üstâ of Kadi-Köy or the üstâ of Bebek", seen in some documents refer to the üstas of the gardens in these districts. The retnue of each üstâ consisted of 20 to 30 bostandıls, in accordance with the importance of the district. The bostandıls of the boathouses and the rowing-boats were specially chosen for these jobs, and pulled the oars of the 24-oar private boat of the Sultan, under the command of the kamladil-bashl (chief oarsman), when the Sultan wanted to travel by sea or to have a sea trip. Thévenot says that "adjami-oghlânls sat by the right oars, and Turkish youths by the left oars, but this is not certain.

A record of the revenue of the flower and vegetable gardens run by the bostandıls was presented every year in November to the Sultan through the bostandil-bashl, and the money paid into the privy purse. Of this money, one purse (500 piastres) was bestowed on the bostandıls and one purse given to the wâbi of the Dâ'ûd Pasha mosque. In this way, when the revenue was presented, property tenable on a life tenure was bestowed on the twelve most senior bostandıls who were then promoted to the mounted oğjak of the kapi-bâlus or to the rank of müteferrika [q.v.].

When the occasion arose, bostandıls were sent on expeditions, e.g., in 1152/1739, 3,000 of them were dispatched by ship to Bender to fight against the Russians (v. Subaşi, 127). The numbers of the bostandıls varied from time to time. At the beginning of the 18th century these numbered 3,396, at the middle of the century 2,947 and at the end 1,998. At the beginning of the 18th century there were 2,400 bostandıls.

The independent oğjak of bostandıls at Edirne had its own organisation. It numbered considerably fewer people than the Istanbul oğjak: 445 at the beginning of the 17th century, 751 at the end of the century, 751 at the beginning of the 18th century. There were 12 oğjak of the bostandıls working in the Sultan's private gardens at Edirne, apart from whom there were bostandıls employed in three other gardens. Bostandıls wore a hat known as barata. Those recruited originally among the đevshirme conscripts were celibate. Later marriage was allowed. Apart from their commandes, the bostandil-bashl, bostandıls had officers known as keshubdu of bostandıls, hâsseli-âgha, kamladil, hâsa-bâlus, helfastili and oda-bashl. Four senior members of the oğjak were known as baltadıls. At times the bostandıls took part in mutinies and lost, in consequence, the confidence of the Sultans. For this reason, Ahmed III had to make changes among them. Among the murderers of Selim III there was a bostandil known as Deli (mad) Mustafa. Bostandıls were also opposed to the military reorganisation measures, known as the nişâm-i djeidî and segbân-i djeidî. When the oğjak of the Janissaries was abolished and the organisation of the new Ottoman army, 'asâhir-i manşûre (victorious army), was extended, these took over the task of keeping order in the districts previously entrusted to the bostandıls; the latter officials' functions being now restricted to gardening and acting as night watchmen. As from Muharram 1242 (August 1826), bostandıls were incorporated in the new organisation. According to the new law, 1,500 persons chosen among the bostandıls, commanded by a major, bâbîbâshl were entrusted with the task of guarding the palace and its environs (Orta-Köy and Dolmabahçe). These formed the nucleus of the corps of guards, known in Ottoman times as hâssa 'askeri. A ministry, known as the Ministry of bostandıyan-i hâssa (bostandıls of the Sultan) was formed to look after them. The oğjak of bostandıls at Edirne was at the same time abolished.

(B. I. UZUNÇARŞILI)
occasion find enough animals to hunt during a journey from Edirne to Istanbul. Incensed, he dismissed the Bostandji-bashi Sha'bân Ağâ, replacing him by Bodur Sinân Ağâ, the Bostandji-bashi of Edirne. Veteran bastandjs objected, however, on the grounds that it was not customary to appoint a commander from another odâjak (Silahdar, Ta'rikh, i, 223). Bostandji-bashis used to entertain the Sultan every spring at a banquet at Kâğıthkhane (the Sweet Waters of Europe) in Istanbul (Wâsi, Ta'rikh, i, 13). When Bostandji-bashis were appointed to an outside post they were usually given the rank of Kapudan-bashi or Sandjak-beyi. Those favoured by the Sultan were appointed to the rank of Beyler-beyi. Later, when the rules of organisation became more lax, there were cases of Bostandji-bashis becoming Grand Viziers. Such were the Paşhas Derviş, Hasan, Topal Rğjeûb, Khâli, Moldovandji 'Ali, Hâfiz, Isâ'âmî and 'Abd Allâh.

Bostandji-bashis, apart from commanding bastandjs proper, were also in charge of the odâjaks of Topkapî, Yalı-Köşk, Sepetçîler, Soğuk-Çeşme, Bagcîlar, Islemiciler, Baamyacalî, Kûshhânî, Gülhânî, Incili, Dolap-Defterî, Balikhânî, Mezbele-Keşan etc. According to Enderûnî 'Â'tâ, this responsibility was passed on to the Bostandji-bashi by busy palace officials, such as the siûlhdar (Chief Armourer), the Çubhâdar (Master of the Wardrobe), the kapl-âghâsi (Chief White Eunuch) or the kudîkhdar (intendant) of the kapl-âghâsis (Imperial Warders). The Bostandji-bashi also commanded a group of hâsîsîs (members of the Sultan's bodyguard). Among the odâjaks commanded by the Bostandji-bashi, that of Balikhânî (fish market) had an evil reputation. Ministers and Grand Viziers sentenced to be exiled or executed were taken there. The fate of the Grand Viziers detained in this odâjak was indicated by the colour of the sherbet offered to them by the Bostandji-bashi. A white sherbet meant exile, while a red sherbet meant death.

When the Bostandji-bashi was dismissed or transferred, he was usually replaced by the kudîkhdar (intendant) of the bastandjs or the ağa (commander) of the hâsîsîs. There were, however, exceptions to this rule. It was customary for newly appointed Bostandji-bashis to be invested with their robe of honour (hâsîev) in the presence of the Grand Vizier ('îzzî, Ta'rikh, 110). There is a register in existence of the coastal residences of the Bostandji-bashi in Istanbul.

The Bostandji-bashi of Edirne was responsible for the maintenance of law and order in Edirne and its environs. Edirne, as the second capital of the State, was not subject to the Wall of Rûmelî, the government of the city being directly in the hands of the Bostandji-bashi. The Bostandji-bashis enjoyed great revenues and were in a position to commit great abuses. New recruits were, for example, sometimes farmed out against payment.

BOSTANZADE, the name of a family of Ottoman 'ulûmîs who achieved some prominence in the 16th and early 17th centuries. The founder of the family was (1) Muştafa Efendi, born in Tire, in the province of Aydîn,

(1) Muştafa b. Mehmèd
(2) Mehmèd
(3) Muştafa
(4) Muştafa
(5) Yahyâ

in 904/1498-9, and known as Bostân (or Bûstân); his father was a merchant called Mehmed (thus in the text of 'Â'tâ and on the tombstone preserved in the Türk-İslâm Eserleri Müzesi in Istanbul; the heading Muştafa b. 'Â'tâ is no doubt an error due to confusion with his namesake Muştafa, known as Kûşkûc Bostân; 'Â'tâ 132. cf. Hüseyin Gazi Yurdaydın in Bell, xix, 1925, 289, n. 136). After studying under various teachers in his native town and in Istanbul, he held a succession of teaching and judicial appointments, and in 954/1547 became Kâdî of Anatolia and shortly after of Rumelia. His appointment was terminated in 958/1551, in connexion with an unfavourable ruling given by him in a case in which the Grand Vezir Rûstem Paşa was interested. Though exonerated by subsequent enquiries, he was not reinstated, and died on 25th Ramadan 977/3 March 1570 (thus the tombstone; 'Â'tâ says 27th Ramadan 977; 'Othmanî Müellifleri puts his death in 968). He was the author of several works of Kurân commentary and theology, some of which have survived in manuscripts in Istanbul libraries. Recently it has been suggested that he was the author of the Sâleymânname that was previously attributed to Ferdî (Yurdaydın, Bell, xix, 1935, 137 ff.).

Bibliography: 'Â'tâ, Dhayl al-Şubûhî, 129 ff.; Yurdaydın, loc cit. 189 ff.; 'Othmanî Müellifleri, i, 253; Sidîqi-i 'Othmanî, iv, 346.

(2) Bostânzade Mehmed Efendi, the son of the preceding, was born in 942/1535-6 and graduated, i.e., obtained his mulâzemet [q.v.], at the age of 21. After holding various teaching appointments, in 983/1573 he abandoned the teaching in favour of the judicial branch of the 'Ilmiyye profession, and became Kâdi of Damascus. His subsequent promotions were rapid; after serving as Kâdi in Bursa and Edirne, he became Kâdi of Istanbul in 984/1576, Kâdî'asker of Anatolia in 985/1577, and of Rumelia in 988/1580. The following year he was retired and in 991/1583 sent as Kâdi to Egypt, where he stayed for three years. In 995/1587 he was reappointed Kâdî'asker and in 997/1589 became Shaykh al-Islâm. In 1000/1592 he was retired (on the circumstances see Na'înî amâno 1000), but returned to active duties as Kâdî'asker of Rumelia and, in 1001-1593, for the second time became Shaykh al-Islâm. He remained in office until his death in 1006/1598. In addition to poems in Arabic, Persian, and Turkish, he prepared a translation of the Ikhâ al-'Ulûm and a commentary on the Muallâk, Hâdîddi Khalifa mentions a fêtûnî in verse declaring coffee leaf (Mizân al-bâhî, ch. VI; tr. G. L. Lewis, 60, 62).

Bibliography: 'Â'tâ, 410; Rifat, Da'wata al-Mâşûhî, 33; 'Ilmiyye Sâlînamesi, 410; 'Othmanî Müellifleri, i, 256; Sidîqi-i 'Othmanî, iv, 133; Hammer-Purgstall, index.

Other eminent members of the family of the Shaykh al-Islâm Mehmed Efendi were his younger brother (3) Muştafa Efendi (946/1539-40—1014/1605-6), who rose to the posts of Kâdî'asker of Anatolia and Rumelia ('Â'tâ, 506-7; SO, iv, 381); his sons (4) Muştafa (980/1572-3—1010/1601), who taught at the Sâbâ-i Thaymân [q.v.] and then became Kâdi of Uskûdar ('Â'tâ 449), and (5) Yahyâ (d. 1049/1639) who became Kâdi of Istanbul and then

**BOZJA-ADA,** the Turkish name for Tenedos, an island inhabited mainly by Greeks and commanding the approaches to the Straits. By the Treaty of Turin (1381) Venice and Genoa agreed to demilitarise Bozja-Ada. The Venetians removed the population to Crete and it was still uninhabited in Clavijo's time. Meldemmed II built a castle on Bozja-Ada; Ewliya calls it *metin.* Ships sheltered at Bozja-Ada while awaiting favourable weather for entering the Straits and it is often mentioned in accounts of naval campaigns. The Venetians captured it in Ramadhan 1066/July 1656 and held it for just over a year. The Greeks seized it in 1912. The London settlement of 1913 provided, at Germany's insistence, that Bozja-Ada should be returned to Turkey but owing to the outbreak of war Greece retained control. By the Treaty of Sèves Bozja-Ada and Imroz (Ibros) were ceded to Greece (art. 84) but demilitarised (art. 178). By the Treaty of Lausanne they were returned to Turkey but given "a special administrative organisation composed of local elements", the police were to be recruited locally and the islands were excluded from any Greco-Turkish arrangements for exchange of populations.

**Bibliography:** There are many incidental references to Bozja-Ada in the chronicles and brief descriptions by Clavijo, Buondelmonti, Tafur, Ewliya Celebi, Spon, Covel, Grelot and Tournefort. (C. F. BECKINGHAM)

**BSHARRA** or Bècharré, one of the oldest villages in northern Lebanon, 1400 metres above sea-level. It is situated at the bottom of an amphitheatre at the entrance to the Kadisha gorge, a hollow ravine of many coves and hermitages, where traces of very ancient monastic settlements are to be found. The Arab geographers refer to the district under the name of Dhidhe Bsharrîyya or Bsharrî. At the time of the Crusades it was one of the fiefs of the County of Tripoli, under the name of Buissera.

**Bibliography:** There are many incidental
This is the 'Road of the Cedars' which the Sultan Kaytbay used at the time of his journey of inspection (9th/10th century), and by which during the 18th and early 19th centuries, armed bands from the Bik'a, suspected of helping the Ottoman authorities, were passing on their way to harry the Maronites. These last had also to defend themselves against the Turkish governors of Tārābulus.

The little town to-day has 4,000 Maronite inhabitants whose houses are scattered over a hillock where vines and mulberries are cultivated in terraces. A little above Bsharrā, there is a clump of trees, a remnants of the famous cedars of Lebanon, which since 1843 has been placed under the care of the Maronite Patriarch.

**BTEDDIN** (a dialectal contraction of Bayt al-Dīn derived from the Syriac Bēth-Dīnā), a place with 800 inhabitants, situated 800 ms. above sea-level and 45 kms. from Bayrūt; the terraces surrounding it grow chiefly vines and olives. BTeddin constitutes with Dayr al-Kamar, a Maronite administrative enclave in the Druze region of Shīḥ. It owes its fortune to the fact that the amīr Bashīr Bilī Shīḥ (q.v.) (1788-1840) chose it as his residence in 1807 and brought the water of the Safa there by means of a viaduct between 1812 and 1815. Hence a certain number of administrative buildings were constructed in the village as well as the palace, a remarkable oriental blend of styles, the work of an Italian architect and Syrian labourers. Built on a rocky escarpment dominating a deep ravine, this palace was from 1814 to a resort of poets (Nicholas the Turk), and Lamartine, who visited it in 1832, has left us a long description of it.

At the end of the Egyptian occupation in 1840, the palace fell into ruins and a serious fire damaged these in 1912; it was partly restored in 1940. In 1948 the ashes of the amīr Bashīr the Great were transferred there from Istanbul. To-day BTeddin is the summer residence of the President of the Republic of Lebanon.

**BÜ [see KUNYA]**

**BÜ HṀĀRA**, a Moroccan agitator who got himself recognised as sultan in north-east Morocco from 1902 to 1909. His real name was Dījlīl b. Idrīs al-Zārkān al-Yūsuf, and he was born about 1865 in the mountains of Zarbān. He had been a member of the corps of engineering students which Māwlāy al-Ḥasan had tried to establish, and then he became a minor civil servant. He was accused of dishonesty and imprisoned, and then became an exile in Algeria. He returned thence in the summer of 1902, and thanks to frauds and alleged miracles managed to pass himself off as a sharīf and even as Māḥammad b. al-Ḥasan, the elder brother of Māwlāy ʿAbd al-ʿAzīz (q.v.), who was then living in seclusion at Meknā. Many sections of the tribe of Ghiyātā in the Taza region recognised him as sultan, and were soon followed by other tribes in the neighbourhood. He was installed at Taza, which he made the capital, in the autumn of 1902. He was generally known as Bū Ḥmāra (Abū Ḥmāra) because it was his custom to ride a she-ass, or as al-Rūfī, from the name of a pretender of the Ruwāğa tribe who had been in revolt in 1862 and had been quickly captured. He incited a revolt against the sultan on account of his relations with Europeans.

ʿAbd al-ʿĀzīz sent two expeditions against him which were beaten successively in the last weeks of 1902, when Fez was threatened. But the Sharīfiyya troops ended by beating him near Fez on January 20th 1903, and reoccupied Taza for a time on 7 July. Bū Ḥmāra, wounded and humiliated, reorganised his forces and retook Taza in November. From there he made contact with two other agitators: Raysūl, who was active in the Tangier area, and the Algerian Bū ʿAmāma, who was fighting against the French in the south of the department of Oran. With the latter he besieged Oujdā for many months from the end of 1904 to June 1905 without result. Between them, he sought refuge near Melīla in the Kaṣbat Salwān and got into touch with the Spaniards, showing them the possibility of mining concessions in the region, which brought him discredit in the eyes of the neighbouring tribes. He however succeeded in recapturing Taza in June 1908, and, taking advantage of the troubles at the time of the accession of Māwlāy ʿAbd al-Ḥāfīs to power, he threatened Fez yet again. The new sultan launched several expeditions against him, one of which succeeded in capturing him about 100 kms. north of Fez, on 22 August 1909. Shut in a cage prepared for this event, he was led into Fez and exposed to the scorn of the inhabitants, but after some days the sultan, weary of his bravado and fearing a European intervention in his favour, had him shot on 15 September 1909. His body was half burnt.

(R. Le Tourneau)

**BŪ SAʿĪD**, the reigning dynasty of ʿUmān and Zanzibar, of Azdī origin. The founder, Ahmad b. Saʿīd, became Wāli of Suṣār under the Yaʿrubī Imām of ʿUmān, Sayf b. Sūtan II. He defeated Suṣār successfully against Nādir Shāh's general, Muḥammad Taṭi Khān Shīrāzī, who came to terms. Within a few years, by force, diplomacy and treachery, Ahmad made himself master of ʿUmān. The Shāh was preoccupied with a Turkish war and did nothing to retrieve his position. The date of Ahmad's formal assumption of the title of Imām is uncertain; it cannot be 1154/1741 as usually stated, and there is some evidence for 1163/1750. He naturally favoured Turks against Persians and helped the former to defend Baṣrah in 1189/1775. He fostered commerce and helped to suppress Indian pirates. His son Saʿīd succeeded him in 1198/1783 but was unpopular and withdrew to al-Rastāk, leaving power to his son Ḥamīd, but retaining the title of Imām. No subsequent member of the dynasty used this title; later rulers were called Sayyīd, though
generally known as Sultan to foreigners. Sa'īd was still living in 1226/1811 but died during the next ten years. Ḥāmid (d. 1206/1792) was succeeded by his uncle, Sūltān, who captured Cāḥbār, Hormuz, Kīšīn, Bandār ʿAbbās and Bahrayn. Persia agreed to lease Cāḥbār and Bandār ʿAbbās to the Bu Saʿīd, who already held Gwādār. In 1213/1798 he concluded a treaty permitting the British to build and fortify a factory at Bandār ʿAbbās and promising not to allow the French or Dutch to establish factories in his realm so long as they were at war with Britain. In 1216/1801 he gave the French resident representatives whom Saʿīd confirmed in office. Saʿīd's attempt to obtain Nossi Bé was foiled by the French. In 1270/1854 he ceded the Kūrīa Bū Sāʿīd territory. By its decision Barghash was recognised as ruler of Zanzibar, Pemba, islets within 12 miles of them, the Lamu archipelago, the coast from Tungi to Kipini to a depth of 10 miles, Kismayu, Barawa, Marka, Makdishū and Wāshayyīm. Lamu was later ceded to the British East Africa Co. and the Somali ports to Italy. In 1307/1890, in accordance with another Anglo-German agreement, Bu Saʿīd possessions north of the Umba River were purchased by Germany, and almost all the rest became a British protectorate. The mainland territories were then leased. In 1309/1892 the administration was reorganised and a British First Minister (Gen. Lloyd Mathews) was appointed. Khālid b. Barghash attempted to seize power in 1310/1893 and in 1313/1896; his second revolt led to the bombardment of the palace by a Bantu tribus hardly recognised his authority on the mainland. Even on the principal islands Saʿīd merely received tribute from the chiefs of the Wahadīmū (the Mwenyī Mkuī), the Wāpemba (the Diwāni) and the Watumbatu (the S̱eḥa). In the middle years of the century the coast from Vanga to Pangani was, except for Tanga, held jointly by Saʿīd and the King of Usambara, who sent representatives whom Saʿīd confirmed in office. Saʿīd's attempt to obtain Nossi Bé was foiled by the French.

On Saʿīd's death (1273/1856) his son Thuwayni remained in control at Maskat and his other son Mājīd at Zanzibar. By the decision of Lord Canning, to whom the dispute was referred, Mājīd kept Zanzibar and paid annual compensation, specifically stated not to be tribute, to Thuwayni. Mājīd's successor was Barghash who had tried to seize power on Saʿīd's death and again a few years later. The influence of the British representative, Sir John Kirk, became paramount and in 1290/1873 the slave trade was prohibited. German penetration in E. Africa resulted in the appointment of an Anglo-Franco-German Commission to delimit Bū Saʿīd territory. By its decision Barghash was recognised as ruler of Zanzibar, Pemba, islets within 12 miles of them, the Lamu archipelago, the coast from Tungi to Kipini to a depth of 10 miles, Kismayu, Barawa, Marka, Mākdishū and Wāshayyi, Lamu was later ceded to the British East Africa Co. and the Somali ports to Italy. In 1307/1890, in accordance with another Anglo-German agreement, Bū Saʿīd possessions north of the Umba River were purchased by Germany, and almost all the rest became a British protectorate. The mainland territories were then leased. In 1309/1892 the administration was reorganised and a British First Minister (Gen. Lloyd Mathews) was appointed. Khālid b. Barghash attempted to seize power in 1310/1893 and in 1313/1896; his second revolt led to the bombardment of the palace by a

slave trade was prohibited under British pressure. About 1319/1901 a dissident movement began in the interior under lIsa b. Sālīh. In 1331/1913 Sālim al-Kharūsī was elected Imām and in 1333/1913 Mīqār was attacked by the rebels and saved only by an Indian detachment. Sālim was murdered in 1338/1920; his successor, Muḥammad b. 'Abd Allāh, made an agreement with Sayyid Tāynūr by which the tribes of the interior enjoy autonomy. Modern Umān includes Zūfār and is bounded by the territories of the Sūltān of Kīshm, the Shaykh of Ra's al-Khayma and the desert. An enclave on the coast around Fugīyār constitutes a separate Trucial state.

(C. F. Beckingham)

BU'ĀTH, the site of a battle about 617 A.D. between most sections of the two Medinan tribes of Aws and Khaṭṭaḍā. It lay in the south-eastern quarter of the Medinan oasis in the territory of the Banū Kūrāyba. The battle was the climax of a series of internal conflicts. The Aws, whose position had deteriorated, were joined by the two chief Jewish tribes, Kūrāyba and Al-Nadīr, and by nomads of Mūzaynā; their leader was Ḥuṣayn b. Sīmāk.

The opposing leader 'Aẓm b. al-Nu'mān of Bayāḍa was supported by most of the Khaṭṭaḍā, and by some nomadic Djihāyana and Ashdād, but 'Abd Allāh b. Ubaṣy [q.v.] and another Khaṭṭaḍā leader refused to join him. The Awsite clan of Ḥuṣayn also remained neutral. In the fighting, the Aws were at first forced back, but eventually routed their opponents. Although the leaders of both sides were killed, the war ended with an uneasy truce rather than a definite settlement.

BUDD (pl. bidāda; Pers. būd) is used in Arabic in three different senses; it denotes either a temple, a pagoda, or Buddha, or an idol (not necessarily the Buddha). The principal instance of the use of the word in the sense of pagoda occurs in a passage in the Merveilles de l'Inde (ed. trans. M. Devic, 5; Mémorial J. Sauvaget, i, 192); this sense appears
to be the rarest, although given as the primary sense in the LA.

*Budd* denotes the Buddha in authors such as al-Dhahīrī (Tarbī, ed. Pellan, 76), al-Maṣūdī, al-Birūnī, al-Shahrastānī; al-Maṣūdī, speaking of the temple called "the house of gold" at Mūlānā (Tanbihā, 202; cf. al-Birūnī, *India*, trad. Sachau, i, 368, ii, 18; Reinaud, in *JA*, 1844-5), says that the appearance of the first Buddha among the Indians dates back 12,000 times 33,000 years. Al-Birūnī, though possessing such a good knowledge of Brahmanism, knew little about Buddhism; the reverse is true of al-Shahrastānī (ed. Cureton, 67 ff.; Fr. trans. Barbier de Meynard, 334); al-Maṣūdī al-Dimashkīi, ed. Mehren, 170 ff.; Eng. trans. R. Levy, London 1918, 284 ff.).

Finally, the word *budd* is often used in the sense of *idol*. We should probably read *budd Kumayr* "idol of Kuvera" in al-Dhahīrī (Tarbī, 40), and Ibn Durayd (apud LA) renders *budd* by *ṣanam*. The author of the *Akhbār al-Ṣin wa’l-Hind*, ed. trans. Sauvaget, 36.

Above *Shaykh ʿAbd Allāh* and in his turn practised the teachings of the order, handed them down to others, and led seekers of Truth to the *Shaṭṭārī* path. *Shaykh Rizk Allāh Mūghtābī*, the paternal uncle of the famous *Shaykh ʿAbd Allāh* was instructed in the method of "the remembrance of God" (dikhr) by him. *Shaykh Budhan*, who flourished under Sultan Sīkāndar Lodhī (regn. 894-923/1489-1517) is described by Khwēshād as "a saintly and blessed person" (*mardī buzurg wa muṭabāḥah*). He died in Panipat and was buried there. His *khālija*, *Shaykh Wali* (d. 956/1549), carried on his work in the town of Badoli and left several *khālijas*.

******Budin** (Budin, Bedin, Bedon, Budin, from the Slav Budin), the Latin and the Hungarian Buda, the kernel of that part of the present Budapest, is situated on the right bank of the Danube, was conquered three times by the Turks in the second quarter of the 16th century (1526, 1529 and 1541). It was declared an Ottoman possession on 29 August 1541, and made the centre of that part of Hungarian territory which was converted into an Ottoman province (*Budin ildiyeti*).

The Hapsburgs, who were the Central European power most concerned with the expansion of the Turks, and who laid claim to the Hungarian throne, made in 1542 an unsuccessful attempt to recapture Budin. No further attack was launched for the next fifty years. It was only at the turn of the 16th and 17th centuries, at the time when the Ottoman Empire was at war with the Hapsburg Empire (Nemce), that the coalition armies led by the House of Hapsburg again repeatedly laid siege to Budin (1595, 1602, 1603). These attacks were, however, repelled by the defenders of the fortress (the most violent attack, that of 1602, was driven back under the leadership of Kādżād ʿAll and Lālā Mehmed). Following this, the Turks enjoyed undisputed possession of Budin for a fairly long period and the fortress had to face hostile armies only after Kāra Muṣṭafā’s defeat under the walls of Vienna in 1683. While the siege of 1684 failed against the resistance of the defenders (Siyāṣuṣ Pāṣa and Sheyṭān Ibrāhīm Pāṣa), the next siege brought victory to the attacking armies. *Abd al-Rahmān Pāṣa*, the defender of the castle, was killed in action, and Budin, termed at the time the "place of the Ghāzī" and the "strong wall of Islam", passed into the hands of the Holy Alliance on 2 September 1686.

The fortress of Budin was built on the castle hill running along the Danube from north to south. The foundations of the fortress were laid in the 13th century by Bīdā IV; it was developed by subsequent Hungarian Kings, and converted, especially by Sigismund of Luxemburg and Mathias Corvinus, into a central royal residence in renaissance style, rich in artistic buildings.

The fortress was protected by high rams erected on the upper slopes of the steep castle-hill. During the Turkish occupation the southern part of the castle-hill, with the medieval royal palace and its
dependencies inside the walls, formed the closed inner fortress (iç kale); it was here that the gun-foundries (topkâhes) and magazines were placed. The rest of the castle-hill was called the middle fortress (orta hisâr) and served to some extent as the residence of the civilian inhabitants as well. The town (sarayı), situated at the foot of the castle-hill, next to the Danube, formed the outer fortress (dişk hisâr) which was surrounded by a simpler town wall and fortified with bastions at the gates. To protect Budin from sudden attacks, guard-houses had been erected at some distance, around the northern thermal springs (Barukbâhâne or Bunar Hisâr, Weî Bey meterisi), further in the neighbourhood of the present Csatárka (Cardak) and on the Gellért-Hill (Gürz Ilyás tepesi).

Although Budin was always considered by the Ottomans an important fortress of the Empire, and a former royal city of great repute, they cared little for the development of the castle and the town. Some of the more active Turkish provincial governors, especially in the 17th century, fortified or reconstructed some points here or there on the castle-hill; a record of these activities was preserved for a considerable length of time in topographical denominations (Weî Bey kulesi, Murad Paşa kulesi, Silâvûr Pasha kulesi, Kârâkâş Paşa kulesi, Kâşim Paşa kulesi, Mahmut Paşa kulesi etc.). The governors, however, were able to do but little towards the fortification of Buda, because their building activities lacked co-ordination and guidance from a central authority and because they were not permitted by the Turkish Governments to remain long at the same place. Not less than 75 persons, several of them repeatedly, enjoyed the rank of Paşa of Budin during the 145 years of occupation, so that the average length of their office was scarcely a year and a half. Thus there was never a general modernisation of the castle, and its system of fortification remained on the same basis at the termination of the Turkish rule as it had been centuries before under the Hungarian Kings. Both material supplies and general equipment were at all times antiquated and deficient. (Pieces of ordnance a hundred years old were found in the artillery stations at the recapture of the fortress.)

The Turkish régime did not leave behind it any architectural works of artistic value, and this applies not only to structures of a military character but to other kinds of buildings as well. The medieval Royal Castle and the buildings of the town, taken by the Turks in 1541 intact, exceeded the modest needs of the conquerors and were thus easily able to meet the requirements of a provincial head-quarters. Slight alterations were needed to make the churches suitable for Muslim religious services (the Church of Our Lady under the name of Sultan Sûleyman Dîâmî; or Büyük Dîâmî; the Church of the Royal Castle under that of Saray Dîâmî; the Church of Saint George under that of Orta Dîâmî; the fortress-of Mary Magdalen under that of Fethiye Dîâmî etc.); other public buildings could be used as barracks, while the empty office buildings and the derelict private houses provided homes for the officials.

Still, even the little building activity that was manifested in the transformation or refurbishing of various buildings (e.g., minarets added to the churches), the Muslim-style bathing establishments added to the thermal springs (erected, at the very beginning of the Turkish period by Weî Bey and Şâkollu Muşafâ) as well as the new constructions necessitated by conflagrations, earthquakes, etc., succeeded in giving the town, in the course of one century and a half, a new exterior sufficient to make it appear a new-style Muslim city in the eyes of any visitor coming down the Danube from the west. As regards appearance and general atmosphere, Budin was indeed a Turkish and Muslim city.

Being at a great distance from the Turkish capital, a centre in the borderlands, it was usual for the Governments to appoint persons of distinction to be the heads of the province of Budin, persons “who were prominent among their contemporaries”. Important special tasks were entrusted to the Paşas of Budin, the guardians of that western borderland of the Empire, which was at the same time the most important frontier zone. At the beginning of the period of occupation, when the Ottoman dynasty enjoyed preponderance over the Hapsburg dynasty, their task was to maintain this preponderance, whereas after the Peace of Zsitvatorok (1606) by which the Hapsburg rulers—called up to then Kings of Vienna (Beğ șîrâll)—had become exempt from the obligation to pay a yearly tribute, and when Turkish preponderance disappeared, the Paşas of Budin were given the task of concealing the weakening of the Empire. To this end the Paşas utilised and inspired controversies among local elements and supported the movements of the discontented Hungarians against the Hapsburgs. The dealings of the Turks with the Vienna Court of the Hapsburgs and the Court of the Princes of Transylvania resulted in a number of inter-state agreements, the ground for which had been prepared by the Paşas of Budin (Peace of Zsitvatorok in 1606, the agreements of Vienna in 1666 and Komôrom in 1618, the peace treaties of Gyarmat in 1625 and Szîny in 1627 and 1642).

The population of the town underwent a radical change under Turkish rule; it is to be noted that Budin was not a populous city before the Turkish occupation, the number of inhabitants being probably below 5,000. A part of them had already left Budin during the civil wars, while a still greater part, viz. the employees of the Royal Household, Hungarian, Caucasian, Albanian, Greek, and army officers and officials as well as the persons in the employment of the Church, emigrated after the Turks had taken Budin. The oldest known list of Turkish tax-assessments enumerates among the inhabitants of Budin 238 Christian (göpr), Hungarian, 75 Jewish and 60 gipsy (kippi) heads of families. As the military personnel of the Turkish garrison (about 2,000 men at the beginning), the employees of the Turkish offices, and the Muslim religious functionaries outnumbered the original or native population at the ratio of 5 to 1, the change in the population was far-reaching from the very first days of the occupation onwards. Budin had thus become a Turkish military town, the population of which was nevertheless far from being Turkish in origin; most of the people in Budin with Muslim names were but newly converted Slavs from the Balkans. (This is clearly evident in the case of the gipsies, the majority of whom bore the theophoric name N. b. 'Abd Allah). Turks of pure extraction formed a minority in the population of Budin, as did the Hungarians, Jews, Albanians, Greeks etc. and they remained in the minority throughout the period of occupation.

The spiritual life of the town was not remarkable. The magistrate and public offices were occupied by the “men of the pen” (el-i kalem); viz. the officials of the administrative authorities, the
Pasha's divan, the local financial administration, the school-masters and the employees of the mosques. We know of religious works (mostly copies only) written in Budin, and we are also aware of certain exponents of religious life at the very beginning of the epoch. Both the names and locations of several dervish establishments are known; the names and memory of a number of bábás, together with the mystery clinging to their persons, lived for a long time, the memory of one of them, that of Gáb-Baba [q.v.], having survived the age of the Turkish occupation by many centuries. As a result of the joint action of the Ottoman and the Crimean Tatars the town of Budin in Sokollu Mustafa's lifetime. There is only sparse data concerning secular intellectual life. We know that folk-singers and minstrels recited epic poems to the frequenter of coffee-houses and of local literary circles, in which poems the history of past centuries and the daily fights of the neighbouring borderland were commemorated; it is further known that Budin's beauty was glorified in meditative songs by local poets (Wügjüd and perhaps others as well). In the towns and the border provinces traditional Turkish folk songs were sung and new ones probably composed. Of works in prose we know the rather sketchy biography of Şoqollu Muştafa, the ablest Ottoman governor of Budin (1566-1578): it was most probably compiled in Budin in Şoqollu Muştafa's lifetime. There is only one among Budin's literary figures who achieved universal repute: İbrahim Peşevlı [q.v.], the historian. He was employed by the local dejterkhâne for some time, lived for many years in Budin, and, after having left it, returned there on many occasions because of his family connexions.

The spiritual life of the Christians (oriental and western) and of the Jews was, as far as can be judged from the sporadic records, rather primitive. The Turkish occupation meant a radical change in the town's economic life as well. The markets had to satisfy the new needs of the new inhabitants of the town, the soldiers of the army of occupation, who brought with them some tradesmen of their own. The craftsmen dealing in household articles and clothing imported not only patterns and fashions but also a quantity of various materials, such as cloth from Bosnia, Djanbolu, Salonica, frieze carpets, finished leather-goods, household articles, vessels, arms etc. These articles were certainly more numerous on the local market than the scarlets, velvets, muslins and fabrics imported from the West.

Industrial development adapted itself to the new requirements. While the artisans from the Balkans (tailors, shoemakers, barbers, tinsmiths, gunsmiths), manufactured clothes, boots, vessels and arms that suited Balkan and Turkish taste, the market of Budin could offer similar articles (Hungarian apparel, Hungarian boots) manufactured in the Hungarian style for the Hungarian inhabitants of the countryside. However, only one or two of the new industries succeeded in taking root, e.g. the production of simple broadcloth (babayé) as made by the Jewish women in Budin, and further the dressing of the skins. The Turks had methods of skin-dressing that were different from, and superior to, the methods employed by the tanners who worked in Hungary before their arrival; the new type of leather industry was then adopted not only in the towns inhabited by the Turks but also in the country, as is evidenced by the topographical term "taban" (the Turkish debdgahkâne) still preserved in many Hungarian townlets.

During the sieges of 1684 and 1686, Budin fell completely into ruin, its medieval buildings, together with those built in the Turkish era, were destroyed, and its Turkish and Muslim inhabitants were either captured or emigrated at the termination of the hostilities. The Budin of later times and the voyvode of Boghdan [q.v.] around 802/1400. As a result of the joint action of the Ottoman and the Crimean Tatars

**Bibliographical references**

There are scattered data concerning the external history of the town in the writings of the Turkish and Hungarian authors of the epoch. We even possess some sparse data concerning secular intellectual life. We know that folk-singers and minstrels recited epic poems to the frequenter of coffee-houses and of local literary circles, in which poems the history of past centuries and the daily fights of the neighbouring borderland were commemorated; it is further known that Budin's beauty was glorified in meditative songs by local poets (Wügjüd and perhaps others as well). In the towns and the border provinces traditional Turkish folk songs were sung and new ones probably composed. Of works in prose we know the rather sketchy biography of Şoqollu Muştafa, the ablest Ottoman governor of Budin (1566-1578): it was most probably compiled in Budin in Şoqollu Muştafa's lifetime. There is only one among Budin's literary figures who achieved universal repute: İbrahim Peşevlı [q.v.], the historian. He was employed by the local dejterkhâne for some time, lived for many years in Budin, and, after having left it, returned there on many occasions because of his family connexions.

The spiritual life of the Christians (oriental and western) and of the Jews was, as far as can be judged from the sporadic records, rather primitive. The Turkish occupation meant a radical change in the town's economic life as well. The markets had to satisfy the new needs of the new inhabitants of the town, the soldiers of the army of occupation, who brought with them some tradesmen of their own. The craftsmen dealing in household articles and clothing imported not only patterns and fashions but also a quantity of various materials, such as cloth from Bosnia, Djanbolu, Salonica, frieze carpets, finished leather-goods, household articles, vessels, arms etc. These articles were certainly more numerous on the local market than the scarlets, velvets, muslins and fabrics imported from the West.

Industrial development adapted itself to the new requirements. While the artisans from the Balkans (tailors, shoemakers, barbers, tinsmiths, gunsmiths), manufactured clothes, boots, vessels and arms that suited Balkan and Turkish taste, the market of Budin could offer similar articles (Hungarian apparel, Hungarian boots) manufactured in the Hungarian style for the Hungarian inhabitants of the countryside. During the sieges of 1684 and 1686, Budin fell completely into ruin, its medieval buildings, together with those built in the Turkish era, were destroyed, and its Turkish and Muslim inhabitants were either captured or emigrated at the termination of the hostilities. The Budin of later times and the voyvode of Boghdan [q.v.] around 802/1400. As a result of the joint action of the Ottoman and the Crimean Tatars
first Ak-Kirmán and Kili in 889/1484, and then the whole of Bugdjak in 945/1538, came under direct Ottoman rule (see BOGDAN). Bugdjak formed the Ottoman sanjak of Ak-Kirmán [q.v.], the boundary running from Sollukta on the Bionta through Gradishče to Kili (Chilia); the Crimean Khan who had cooperated with Suleymán I during the 945/1538 campaign settled the Noghay tribes in Budjak (the Manşûrs, the Orâks, the Kașâyis, the Mamâys, the Or-Mehmeds, the Tâtmûz, the Yadieko, the Diamboyluk) (cf. Sa-âbî al-sâyârî, 168), thus reinforcing the earlier Tatar inhabitants. In 1077/1667 Eyleiyâ Celebi reported (v, 106) that these Tatars formed 200 villages and were very wealthy; the villages towards Bender contained some Tatars or were composed entirely of Wallachs; the villages of Ismail were wholly Tatar. Toward 978/1570 Bender and Ak-Kirmán were centres of sandjakîs under the beglerbegi of Orz (q.v.), whose seat was at Ak-Kirmán or Silistre. The Tatars of Bugdjak were under the administration of a Yâll-aghârî appointed by the Crimean Khan, and later under the second heir to the Khanate (the next to the Khan, the Nâr al-Dîn), who resided at Khan-Kishlâsî, south of Bender.

In the struggles against the Kazaks (Cossacks) and Poland in 1620, the beg of the Noghayûs, Kantimir distinguished himself, and the Ottomans supported him against the Crimean Khan and made him beglerbegi of Orzî, in an endeavour to wrest control of the Noghayûs Tatars from the Khan. In 1111/1659-1113/1701 the Noghayûs of Bugdjak (6000 families) threw off their obedience to the Khan and asked to be made Ottoman subjects; on this occasion the Porte did not encourage them, and Dewlet Gerey (Giray) forcibly transferred 700 to 800 families to the Crimea (Al-Sâbî al-sâyârî, 262-66).

In 1784/1770 Bugdjak was temporarily invaded by the Russians, and thereafter Orthodox Christian Gagauz Turks and Bulgars began to immigrate from Dobrudja (q.v.) into Bugdjak. By the Treaty of Bucharest (28 May 1812) the Porte ceded Bugdjak to Russia, and the majority of the Tatars emigrated to the Dobrudja, Bulgaria and Anatolia.

BUDÎNJîR (Borunîrd). 1. Town in Khurâsân situated at the northern foot of Mt. Alââdâgh, 57° 17' E. Long. (Greenw.) 37° 29' N. Lat., alt. 698 m. We find no information about the town before the time of the Saffawids, when the Shâhid tribe of Kurds was settled in this area by Şâh 'Abbâs I. It is uncertain whether Budinûrd was called Bâzanjîr before this time, but the ruins of an old citadel (arg) and other structures indicate that the town is old.

2. District of which Budinûrd is the capital. The population of the Khurâsân has been estimated ca. 150,000 (1950), composed of Turkomans, Kurds and Persians.

BUDÔR (see supplement).

BUGHÂ AL-KâBIÎR (the elder), a Turkish military leader who played a political rôle during a troubled period under the 'Abbâsid caliphate. Under al-Mu'tâsîm and his successors, he distinguished himself in several expeditions against rebellious tribes in the region of Medina in 10/844-45, in Armenia in 1227/851-52, and against the Byzantines in 1244/857. Absent at the time of the assassination of al-Mutawakkil in 247/861, he returned subsequently to Sâmarra and, making common cause with the other Turkish officers, compelled the succession of al-Musta'în in 248/862. He died in the same year.

His son, Muḥâammad b. Bughâ, came also to occupy an important place in the political scene at Sâmarra, and to direct for a time the hadîd service.

BUGHÂ AL-SHÂRÂBI (the cup-bearer), also called Al-Sâgîr (the younger) a Turkish military leader who bore the title ma'sûd al-mu'mînîn, and who is not to be confused with his contemporary of the same name, Bughâ al-Kabîr. After having fought, under al-Mutawakkil, against the rebels of Aḥbarbayânî, he led the plot against this caliph, whom he suspected of wishing to reduce the influence of the Turkish officers, and had him assassinated. With his ally Wâsîf, he subsequently held power under al-Muntasîr and al-Mu'âtîzâz, however, ascending the throne in 252/866, sought to rid himself of this ancient enemy, the murderer of his father, and after relieving him of his functions and privileges, succeeded in 254/868 in having him imprisoned and put to death.

During Mamlûk times risings of Arab tribes and Bedouin of the Western Desert are frequently recorded. These rebellions began towards the end of the 9th/15th century; there were terrible punishments; summary executions; the enslavement of women and children, and confiscation of flocks. In the Ottoman period the troubles quite often provoked punitive expeditions, and the province was far from being quiet during the French occupation, as one sees from the massacre of the small French garrison of Damānah. After the departure of the French great importance was accorded to the Bedouin of the district, in whose favour an imperial firmân was promulgated, confirming their ownership of their territories. But their turbulence, of which the Mamluk bey Muhammād Alî momentarily took advantage, could scarcely be overcome. Muhammād Alî made no attempt to conciliate the Arabs of the province in his struggle against Muhammād Alî.

**AL-BUḤJAYRA AL-MAYYITA (OF AL-MUNTINA)**

[see Bahr Lût]
that he has been confused with various characters similarly possessing the name of Buhlul, and among whom to be found genuine traditionists (see particularly Ibn Hadjar, _Sudan al-Mtan_ , s.v.). One of them, who lived in Iraq and who died in 218/739, was named Buhlul b. Rāṣḥid, which perhaps explains the persistent tradition (see Ibn Tagihrbardi, i, 518; _ZDMG_ , xiii, 113) which identifies Buhlul with al-Sabṭī, legendary son of Hārūn al-Raṣḥid (279/892). He then left Iraq and became court poet, and among them, who lived in Ifrikiya and who died in particular Ibn Hadjar, whom are to be found genuine traditionists (see Chauvin, _Bibli. ar._ , vi, 193, and bibli. quoted).

Buhlul's tomb in Baghda was described by N. den Boer (Reisbesch., ii, 371 f.; Le Strange, _Baghdad_ , 350), and an inscription dating from 501/1100-8 designates him as the sultan of the _madjīdahs and as an "obscure, dim soul" (naṣṣ mutammama). People called him Buhlūḍānā, "the wise fool", and they made of him the kinsman and the buffoon of al-Raṣḥid, and they told stories in the coffee houses about his wit and subtlety. The culmination of the development of the legend of Buhlul was reached when he became the hero of erotic tales as in _al-Rawf al-Aṣ'ir_ (ed. 1315, 9) of al-Nafzāwī (8th/14th century), which makes him a contemporary of al-Ma'dūn (see also Meissner, _Neurab, Geschichten, v_ and 73-83).

The word _buhlū_ is given in Arabic dictionaries with the meaning of "merry, jolly" ( _dakhbī_ ), "a generous and distinguished man", and it is still this sense which Redhouse ( _Turkish and English Lexicon,_ 416a) and Dozy offer (following Bocchtor, although the latter does not fail to call attention to the meanings of "booby", "idiot", etc. which are already encountered in Ibn Batṭṭa (ii, 89) and Ibn Khaldūn ( _Mubādima, ed._ Quatremère, i, 230 f.). Currently, and particularly in North Africa, it has the general meaning of "simpleton", "ninny", etc., and H. Wehr, _Wörterbuch_ , gives "wag, clown, buffoon". Owing to the fact that _bahlūš/bahlūd_ still sometimes denotes an intense hilarity (see Doutté, _Marabout_ , D. B. Macdonald, _EP_ , s.v.) infers that the present use of the word rests also on its literal sense and not on the existence of an historical Buhlul. It is of course possible that there may be some confusion with _bahlūš/bahlūd_ , which has the same meaning, but it is probable that the modern meaning proceeds from the proper name. 

Bibliography: Add to the references given in the text, Brockelmann, _S I_ , 350. (Ed.)

AL-BUṬṬURI, Aḥūbāda al-walijd b. ʿUbayd (Allah), Arab poet and anthologist of 3rd/9th century (206-284/827-937), born at Manbij (some state his birthplace to be the neighbouring village of Ijurduna), into a family belonging to the Buṭṭur, a branch of the Tayy; not only did he never completely sever connexions with his native town, where the fortune amassed during his long career as court poet allowed him to acquire property, but he took advantage of his tribal origin to make useful connexions for himself.

After having dedicated his first poetic efforts (223-6/837-40) to the praise of his tribe, he sought a patron, and found him in the person of the Taʿṣī general Aḥūb Saʿdī Yūsuf b. Muhammad, known as al-Taḥṣī (s.v.), at whose house he met for the first time the poet Aḥūb Tammān, who also claimed to be a Taṣī. Aḥūb Tammān, attracted by his youthful talent, apparently recommended him at first as a panegyrist to the notables of Māʾarrat al-Nuʿmān, who made him an allowance of 4,000 dirhams, but nothing remains of his output during this period. In any case al-Buṭṭuri was not slow in joining Aḥūb Tammān in the retinue of his patron Māʾīk b. Tawk, governor of Mesopotamia, and then in following him to Baghdad, where, by attending the courses of the most celebrated women (notably Ibn al-Arṭābī) and by striving to acquire the manners of the capital, he prepared himself to extol important personages in the hope of getting close to the caliph.

However, he had scarcely any success with Ibn al-Zayyāt, and instead allied himself to a family of his own tribe, the Banū Ḥumayd, some members of which were established in Baghdad, and he dedicated several odes to their chief, Aḥūb Nāḥag; then he left Ḥirā at the same time as Aḥūb Tammān, in 230/844, to return to al-Taḥṣī, then at Mosul.

Contrary to all expectation he does not seem to have grieved at the death of Aḥūb Tammān (231/845), from whom nevertheless he had received his first encouragement, and part of his poetic training; this was the first instance of the ingratitude and opportunism of which he gave ample proof later.

No sooner had al-Mutawakkil succeeded than he returned to Baghdad, and thanks to the offices of Ibn al-Munajdīn we have our first instance of his Hamāsa and a number of panegyrics; he also praised numerous great figures of the empire, but it was for the caliph that he kept the greater part of his poetic output; he lived on familiar terms with him, enjoying his confidence, supporting government policy even when this clashed with his personal views which had a ʿAbbāsid bias, and proclaiming the virtues and rights of the ʾAbbāsids. The verse of this period contains many allusions to political happenings—the rebellion at Damascus (236/850), the revolt in Armenia (237/851), the rising at Hims (240/854), the caliph’s visit to Damascus (244/858), the building of al-Mutawakkiliyya (245-6/859-60), etc.

Whereas heretofore the erotic prelude to his _baṣdās_ had been dedicated to a conventional Hind, there now appeared in his verse a woman of the same rank and blood, ʿAlīa bint Zurayka, who lived at Aleppo and had a country house in the district, at Bītās; without doubt he used to see her during his journeys in Syria, for his stay in Ḥirā was never interrupted, and it is possible that he had a great passion for her, although he mocked her in a somewhat indecent poem.

After having been concerned, as al-ʾMasʿādī reports of him, in the assassination of al-Mutawakkil and al-Fath (247/861), he thought it prudent to retire to Manbij, but he reappeared soon afterwards with a panegyrical of al-Muntasir, and afterwards addressed his praises to the ʿawr Ahmād b. al-Khaṣbī, against whom, incidentally, he did not hesitate to incite al-Muṣṭaʿ in some time later. He tasted fame once more under al-Muṭṭāz, to whom he dedicated numerous poems, in which are echoes of the unrest which was watering the provinces of the empire with blood, but which by no means prevented him from welcoming al-Muhtadil as if nothing had happened, and from becoming temporarily a poet of piety to humour the new caliph. His fame declined under al-Muṭṭamid, whose fiscal policy caused him some anxiety over his fortune, and his last poem dedicated to a caliph is in praise of al-Muṣṭāḍil (279/892). He then left Ḥirā and became court poet.
In the beginning of his career, al-Buhturi wrote almost exclusively, vainglorious poetry or poems about his desert wanderings (a notable example is the famous poem of the jackal, ii, 110), but as soon as he became court poet the panegyric became the main form of his work. In this style he respected, except perhaps at the end of his life, the tripartite form of the ḫasīda, painting a conventional portrait of his various patrons; however, the panegyric is successfully heightened by splendid descriptions (not a particular of the palace) where, thanks to a fine sense of poetic imagery and picturesque detail, al-Buhturi stands unchallenged; it was only later that he devoted an entire poem to describing a palace, the Iwan of Chosroes (see ʿAbd al-Ḵādir al-Maghrībi, in MMIA, 1956, 77-88, 241-52, 427-36, 577-85).

According to Abu Tammām and al-Mutanabbi, as one of the most classic poets, and this label suits him perfectly. For interest in al-Buhturi, class him among the neo-classics, or in describing monuments, or in mentioning occurrences which historians appear to have overlooked.

The Diwan was published at Constantinople in 1882, then at Beirut and Cairo in 1911, but these editions are rather faulty and incomplete, so that a new publication taking into account the various MSS. (notably that in the Bibliothèque Nationale in Paris) would be most welcome. A commentary compiled by Abu ʿIṣāʿ al-Maʿṣūrī, ʿAbāt al-Walād, was published at Damascus in 1355/1936.—Of the Ḥamāsa only one MS. (University of Leiden) has been discovered, which is evidence of the lack of success of this anthology, in which the verses are grouped according to their themes and not according to their genres, as in that of Abū Tammām; there have been three editions: Leiden 1909, Beirut 1910, Cairo 1929.—A third work attributed to al-Buhturi, Maṣʿīn al-Ṣhīr (or al-Ṣhūrāt), is lost.

BOK, the generic name for any instrument of the horn or trumpet family. Wind instruments played by means of a cup-shaped mouthpiece may be divided into two classes, viz.: 1. the horn or conical tube type; and 2. the trumpet or cylindrical tube type.

1. The horn type. Whether the ʿūr and nāḥār mentioned in the Kurʾān (vi, 73; lxiv, 8; lxviii, 18) were horns, as Ahmad b. Ḥanābal (d. 241/855) and al-Ḍjawahirī (d. ca. 396/1005) say respectively, the early Persians and Arabs certainly knew of a conical tube instrument of the animal horn type. An example may be found in Greek art of the 14th century B.C. in which an Asiatic warrior is displayed sounding such an instrument, whilst a Greek warrior is sounding a straight trumpet (Gerhard, Apulische Vasen, pl. ii). The Arabs appear to have known the crescent-shaped horn as the bārn (Seybold, Glossarium Latino-Arabicum, 519), cognate words being found in the Akkadian bānu and the Hebrew šerēm. This instrument is still used by the perambulating darwīshes in Persia. According to Turkish tradition the darvāz borusu (būrīsī) (dervish horn) was invented by Manūʿīnīsī the legendary Persian king (Ewilīyā Čebebe, i/i, 238). For a design of the instrument see Advienne, 9, and Lavignac, 3075, by whom it is wrongly called a nafīr. Actual specimens may be found in museums, e.g., the Crosby Brown Collection, New York, no. 2454. There is a large Hispano-Moorish horn of ivory of the 14th-15th-16th century in the Victoria and Albert Museum, London (no. 2953/ 1862). Much larger instruments were also in use. Ibn

Indeed it forms a useful supplement to the chronicles of the time to which it often adds details, whether in giving the full names of personalities, or in describing monuments, or in mentioning occurrences which historians appear to have overlooked.
Batūtah (d. 779/1377) describes such an instrument of the Sudan made from an elephant’s tusk (Voyages, iv, 411), hence the term oliphant horn. An Andalusian Arab, Al-Shakundi (d. 692/1293), speaks of a monster horn (karnā) known as the ābā ḍurūn (‘father of horns’) as related by Al-Makfari (Analectes, ii, 144), which would be comparable to the monster horn (bāk al-kabīr), the height of a man, referred to by Muḥammad al-Saghir (Tadhkirat al-Nisyān, 45).

A horn made out of a shell was known to the Arabs of the Peninsula in the 2nd/8th century. Al-Layh b. al-Muṣṭafārī says that it was used by millers, and that it was a spiral conical one resembling the minkāb and apparently something like the ṣammāk of India (Day, Music and Musical Instruments of Southern India, 151). It was probably the instrument which the Arabs called the bāk. It was not a warlike instrument in the early days of Islam, as the Arabs did not use horns in battle at that time (Ibn Khaldūn, Muḥaddidā, xvii, 44). A poet quoted by Al-ʿArmāʾī (d. 828) says that the bāk was used by the Christians for that purpose, and, according to Al-Djawharī, the Arabs borrowed that usage from them. In fact the word bāk appears to have been derived from the Greek ποικιλὸς or the Latin buccina (Dozy, Suppl.), although in the Tādż al-ʿArās the Persian word būrū is considered to be the etymological original, an ‘obviously improbable’ derivation (Lane, Lexicon). In the 4th/10th century the Iḫwān al-Ṣafwān refer to the bāk to illustrate their discussion on acoustics (Bombay ed., i, 89). From that time the bāk began to play an important part in martial and processionel music in all Islamic lands (see Tābl-Kūāna). In the Alī Laylā wa Laylā (ed. Macnaghten, i, 80, ii, 382, 403) it is in constant use for those purposes, whilst the nafir or trumpet is only mentioned once (ii, 656). Yet it should be understood that the term bāk was used for all instruments with a conical bore, whether crescent-shaped or straight, irrespective of the material of its facture,—shell, horn, or metal. Incidentally, the metal horn (Turkish pişendil borusı) is claimed to have been introduced by the Saldūqids of the 5th/11th century (Ewlyā Celebi, i/i, 238). In view of the use of metal instruments by both Persia and Byzantium much earlier, that statement cannot be accepted. The bāk is mentioned in Persian as early as Firdawsi (d. 1020) and one supposes that the instrument was little different from the straight horns depicted on the Tāk-i Bastān sculptures (590-628 A.D.), and is still the type to be found there (Advilex, 9; Lavignac, 3075). In Moorish Spain the būk of Al-Ḥakam II (d. 369/979) were mounted with gold. It was this monarch who, having devised the boring of the tube with finger holes and the insertion of a beating reed at the blowing end instead of a cup-shaped mouthpiece, introduced an instrument of the saxophone type (see Mızmār). The Spanish albugue is its lineal descendant.

The Turkish and Persian equivalent of the bāk was the borū (būrī) (Ḥādīdī Khālīfah, i, 400; Meninski, s.v. bāḥ; Ewlyā Celebi, i/i, 238; Toldernī, i, 238). The word is to be found in modern Egyptian and Syrian Arabic (Amery, English-Arabic Vocabulary, s.v. bugle; Ronzevalle, MFOB, vi, 29). It has become the Balkān bore and boreyé (cf. the Sanskrit bhariya and the Ghanaian buro). The burgha or burghā, a Caggatay word, was a huge horn introduced into the Islamic armies during the Mughal and Tatar regime. Ibn Ghaybī (d. 1435) says that it is longer than the nafir. The name survives in the buruga of India (Day, 153; Lavignac, 358) where it is another name for the karnā. Another instrument of the same group mentioned by Arabic authors is the shābūr. Al-Djawhari says that it is a non-Arabic word, which Ibn al-ʿAṣāfī Madjd al-Dīn (d. 1310) has rightly surmised was borrowed from the Hebrew ḍābhar. Firdawsi includes the ḍāyātār among the ancient martial instruments of the Persians. The existence of the Arabic word nafir, as mentioned by A. X. Idelsohn (Jewish Music, 495, and J. Reider (JOR, Jan. 1934), must be accepted with reserve. Félix mentions a modern Arabian trumpet under the name shābār (Hist. gén., ii, 155), but see Mahillon (i, 182; and the Saturday Review, June 1882, 696).

2. The trumpet type. The chief instrument of the cylindrical tube class was the nafir, although the name is frequently given to the straight instrument of the horn type (see Host, Nachrichten von Marokos og Fes, pl. xxxi). The name nafir in this connexion occurs first in the 5th/11th century under the Saldūqids, although the type may have been known earlier. Kurt Sachs (Reallexikon der Musik-instrumente, s.v.) erroneously derives the word from nāṭakha (‘to blow’). Originally the term nafir meant ‘a call to war’, and so a trumpet used by such was called a būk al-nafir, i.e., ‘a military horn or trumpet’. Ibn al-Tiktāka, in al-Faḥīrī (30) speaks of a large būk similar to the bāk al-nafir, from which we may reasonably deduce that the ordinary bāk was smaller or shorter than the nafir. The bright incisive tone of the nafir, which was due to its cylindrical tube, was better for signalling purposes than the hoarse sound of the būk with its conical bore. The difference between them may well be illustrated by the verbs used to describe their sounding. We read for instance that the būk player ‘blew’ (nafakha) his horn, whilst the nafir player ‘cried out’ (Ṣiḥā) with his trumpet. For the respective numbers of the nafir and būk used in the Islamic army bands, see Tābl-Kūāna. In the time of Ibn Ghaybī the length of the nafir was 168 cm. (= 2 gas).

The karnā, according to Ibn Ghaybī, was a trumpet folded in the centre of its tube into a ‘S’ shaped figure. Some of them were of enormous length. The Persian dictionaries give the form as harrandīyā, and it is thus vocalised in the Persian literature. It is generally acknowledged (Buhle, 28; Schlesinger, xxvii, 326, 353; Galpin, 200) that the cylindrical bore instruments were borrowed from the East. Perhaps those buccins Turcs and cors sarraynos which the Crusading chronicles record included the nafir and harrandīyā. Richard Cour de Lion, in the Third Crusade (1189-92), was well equipped with tubae, italianum et buccinum, but at Messina in Sicily, we read of a trumpet which was different from the tuba. Could this have been the nafir of the Hohenstaufen Saracen troops on the Island? Yet if the Occident was indebted to the Orient for the cylindrical nafir, the compliment was returned, since we know that Morocco, under Sultan al-Manṣūr (1576-1602) had a tuba (Turc. = Spanish trompeta) which was made of brass and was as long as the nafir (Tadhkirat al-Nisyān, 117; the translator writes negir). Turkey also knew of the European trumpet (tūrmpotā borusu) as well as the English trumpet (ingilis borusu), the latter being the modern wreathed instrument (Ewlyā Celebi, i/i, 238). Both Niebuhr and Villoteau give designs and descriptions of the 17th-19th century instruments.

**BUK**

One of the leaders of the group of the Oguz of Khurasân which, after the capture and death of its leader Arslan b. Saldjayik (427/1036?), was expelled from the province by the Ghaznavid troops on account of its depredations, and continued its pillaging across central and western Iran as far as the borders of Armenia and Upper Mesopotamia, where it was annihilated by the Bedouin and Kurds in 435/1044. See *EI*, s.v., the article *saldâqêk*, and Cl. Cahen, *Le Mikahemeh et l'histoire des origines seldjukides*, in *Orients*, 1949, 57. (Cl. Cahen)

**BUÇA**

A place, no longer extant, in northern Syria, whose name is very probably a word of Syriac origin meaning "mosquito", from which fact H. Lammens has inferred that the region was a marshy one. It is figured in the Arabic texts of the first centuries of Islam. Nothing is known of its more ancient history, but it is mentioned in the narratives of the conquest by Abu 'Ubayda of the provinces of Antioch and Kinnasrin, and appears to have had a certain importance in Umayyad times. Then it was near the territory of the Djadirjuma, placed by al-Baladhuri in the *Djedal al-Lukkan* (Amanus) between Bayda and Bâb. It was one of the places chosen for the establishment under Mu'awiyah or al-Walid of the Zu'a [q.v.] from Sind, who arrived there from Iraq and installed themselves with their buffaloes. Later its defences were strengthened by the caliph al-Hâjûm, who built a fortress there. The Byzantines besieged it in 338/949-50, during a raid on Syria by Leo Phocas, and it then belonged to the territory of the *Awâqima* [q.v.], but the mentions made of it in the 6th/12th century by Ibn Shaddâd and Yûkût seem to reflect an earlier state of things. Although it is not known in what circumstances it fell into ruins or was abandoned, by the time of the Crusades it had lost its previous importance, and H. Lammens (*EL*) could establish only by conjecture, based on literary data, the site which it presumably occupied in the *Amk* [q.v.] depression, not far from the lake of Antioch.

**Bibliography**

**BUK**

A term employed in Algerian Arabic (cf. *bâkâ*<sup>2</sup>) to denote a two-handled pottery vase used by women in the course of the divinatory practices to which it gave its name. The operation consisted, basically, of the woman who officiated improvising, after an invocation, a short poem which was also called *bâkâ* and from which portents were drawn. These practices, which seem to have enjoyed a certain vogue during the period when piracy was at its height (women wanted to have news of their men who were at sea), developed into a parlour game. They were recently the subject of an excellent study by S. Bencheneb, in *AIEO*, Algiers 1956, 19-111 (with numerous texts in *EO*). (Ed.)

**BUÇALAMON** [see *BUÇALAMON*]

**BUÇAREST** [see *BUÇREȘT*]

**BUÇAY** [in particular] denotes a little plain situated north of the Bîcă [see *BUÇA*] and south-east of the *Diebol Anşariyê*, at an average altitude of 250 m. It is characterised by an abundance of springs which give birth to the Nahr al-Kabîr. It was known in the time of the Crusades by the name *Boquêle* and was dominated by the *Hiss al-Akrâd* [q.v.] whose ruins still overlook it today (see M. van Berchem and E. Fatio, *Voyage en Syrie*, Cairo 1914-5, 42; R. Dussaud, *Topographie historique de la Syrie*, Paris 1923, 92; J. Weulersse, *Le pays des Alcoulas*, Tours 1940, *index* s.v. *Bouquela*).

The name *Buçay* is found likewise in Transjordania, where it denotes a small inland plain to the north of the *Balâk*<sup>2</sup> whose ruins still overlook it today (see M. van Berchem and E. Fatio, *Voyage en Syrie*, Cairo 1914-5, 42; R. Dussaud, *Topographie historique de la Syrie*, Paris 1923, 92; J. Weulersse, *Le pays des Alcoulas*, Tours 1940, *index* s.v. *Bouquela*).

**BUÇAY b. MÂHÂN**

Abû *Hashîm*, propagandist of the *Abbâsids* at the end of the Umayyad caliphate, was a native of Siǧîstân and had at first been secretary of the governor of Sind. He was born in *Djûrayd b. Abû al-Râhîm*. In 332/946-7 he was converted to the anti-Umayyad cause by Maysara...
al-ʿAbdī and Muḥammad b. Khunayr, and he put at the disposition of their party the fortune which he had amassed in business in Sind. After the death of the governor, which occurred at the direction of the movement in 1057/1224-5 and he was unusually active in gaining supporters among the population of Khūrāsān. In 1077/1226-7 he also sent many emissaries to this region, who, with one exception, ʿAmmār al-ʿAbdālī, were at once taken and put to death by the governor Asad b. ʿAbd Allāh. Later, in 118/736, he appointed ʿAmmār b. Yaʿqūb as chief over other agents who had been first imprisoned and then succeeded in freeing themselves. ʿAmmār established himself at Marw, took the name of Khīdāsh, and met with some success, but having adopted the doctrines of the Khurramīs [q.v.] was in his turn imprisoned, tortured, and put to death by the governor Asad. This situation disturbed the shaykh Muḥammad, who was not content with the explanation offered in 1207/1324 by the delegate of the Khūrāsānīs, Sulaymān b. ʿAlī b. ʿAbd al-Qādir [q.v.], and despatched Bukayr himself to repudiate publicly the doctrines of Khīdāsh. Bukayr was badly received the first time but the second time succeeded in convincing the ʿAbbasīd partisans. Afterwards, in 1224/1412-13, having returned to Irāq and being held responsible for political meetings which took place in a house at Kāfā, he was imprisoned. There he won over to his cause ʿĪsā b. Maʿṣūm, from whom, according to an unreliable tradition, he bought a slave, the future Abū Muslim [q.v.]. Set at liberty, he went to Khūrāsān in 1227/1414-5 to announce the death of the shaykh Muḥammad to the partisans of the ʿAbbasīd, and to make them swear allegiance to his successor Abū Saʿīd al-Maghzī [q.v.]. He returned to Irāq and was imprisoned. There he won over to his cause Abū Salāma Ḥāṣl b. Sulaymān [q.v.], a choice which Ibrāhīm later accepted.  

**Bibliography:** ʻAbd al-Qādir, Dīnawarī, index; L. Caetani, *Chronographia Islamica*, (or Bukhara Khudat) by the Islamic sources; on the coins we have *pee)v* found on coins, indicates on palaeographic grounds that the name may have been used several centuries earlier. The derivation of this word from Sanskrit vihāra “monastery” is not improbable in spite of linguistic difficulties, since there was a vihāra near Numidi-kāth, a town apparently the predecessor of Bukhārā, and which merged into the latter (cf. Frye, *Notes in HJS*, below).  

The native dynasty was called Bukhārā Khudāt (or Bukhārā Khudā) by the Islamic sources; on the coins we have *pee)v* found on coins, indicates on palaeographic grounds that the name may have been used several centuries earlier. The derivation of this word from Sanskrit vihāra “monastery” is not improbable in spite of linguistic difficulties, since there was a vihāra near Numidi-kāth, a town apparently the predecessor of Bukhārā, and which merged into the latter (cf. Frye, *Notes in HJS*, below).  

The accounts of the first Arab raids across the Oxus River are partly legendary and require critical examination. The first Arab army is said to have appeared before Bukhārā in 54/674 under ʿUbayd Allāh b. Zīyād. The ruler of Bukhārā at that time was the widow of the late ruler Būdūn, or Bandūn. (In *Tabarī*, ii, 169, in place of her Kabad[ ] Khatun is Kayikh, as the Turkish tribal name?). According to *Narshākhī* (ed. Schefer, 7, trans. Frye, 9) she ruled for 15 years as regent for her infant son Tūshkhādā (*Tabarī*, ii, 169), has Tūk Sīyādā; cf. reference by O. I. Smirnova, *K imeni sogd'yanskogo vikhada Tukshadaka, in Trudy Akad. Nauk Tadzhikskoy SSR*, Stalinabad 1953, 209). This same Bukhārā Khudāt appears again in al-*Tabarī* as a youth in 917/1019 when Ḥutayba b. Muḥammad, after overthrowing his enemies, installed him as prince of Bukhārā. The rule of Islam in Bukhārā was first placed on a firm footing by Ḥutayba. In Ramadān 111/Aug.-Sept. 739, Tūshkhādā was murdered in the camp of the governor of Khūrāsān, Nasr b. Sayyār. During his long reign several rebellions against the Arab conquerors took place in Bukhārā and the Turks invaded the country several times. In 1107/1289-90 the town of Bukhārā itself was lost to the Arabs and they had
to besiege it but regained it the next year (al-
Tabari, ii, 1514, 1529).

The son and successor of Tughshād, called
"Kutayba" in honour of the conqueror, behaved at
first like a good Muslim. When in the year 133/750,
the Arab Sharīk b. Shaykh raised a revolt in Bukhārā
gainst the new dynasty of the 'Abbāsids, the
rebellion was put down by Ziyād b. Šālih, lieutenant
of Abū Muslim, with the help of the Bukhārā Khudāt.
Nevertheless the latter was a short time later
accused of apostasy from Islam and put to death by
order of Abu Muslim. His brother and successor
Bukhārā, at although another brother Skān, reading
uncertain, may have ruled a few years between) met
the same fate during the reign of the caliph al-Mahdī
(probably in 166/782), for the Caliph had him put to
death as a follower of the heretic al-Mukanna
. After this period the Bukhārā Khudāt's appear to
have been of little importance in the government
of the country but they an influential position
bought at their great estates. In the early years of
the reign of the Sāmānīd Ismāʿīl, mention is made
of the Bukhārā Khudāt who were deprived of his
lands but allowed the same income (20,000 dirhams)
from the state treasury, as he had previously derived
from his estates. It is not known how long the govern-
ment fulfilled this obligation.

Besides the native prince there was of course in
Bukhārā, at least from the time of Kutayba b.
Muslim, an Arab amir or 'āmil who was subordinate
to the amir of Khurāsān whose headquarters were
in Marw. On account of its geographical situation
Bukhārā was much more closely connected with
Marw than with Samarkand. The Bukhārā Khudāt
had even a palace of his own in Marw (al-Tabari, ii,
188, 14; 1987, 7; 1992, 10). In the 3rd/9th century,
when the amirs of Khurāsān transferred their seat
to Nihāpūr, the administration of Bukhārā remained
separate from that of the other parts of Transoxania.

Till 26O/874 Bukhārā did not belong to Sāmānīd
territory but was under a separate governor imme-
diately responsible to the Tāhirsīd. After the fall of
the Tāhirsīd (259/873) Yaʿṣūb b. Layḥī was recog-
nised only for a brief period in Bukhārā as amir of
Khurāsān. The clergy and populace applied to the
Sāmānīd Naṣr b. Ahmad who was ruling in Samar-
kaṇd and he appointed his younger brother Ismāʿīl
governor of Bukhārā. Bukhārā was henceforth
ruled by the Sāmānīds until their fall. Ismāʿīl
continued to live in Bukhārā after the death of his
brother Naṣr in 279/892 when the whole of Mā warā
'nihr (Transoxania) passed under his sway, and
also after his victory over 'Amr b. Layḥī in 287/900
when he was confirmed by the Caliph in the rank
of amir of Khurāsān. The city thus became the
seat of a great kingdom although it never equalled Samarkand in size or wealth during this
period. It was in Bukhārā that the New Persian
literary renaissance bloomed.

The Bukhārā of the Sāmānīd period is described
in detail by the Arab geographers and we also owe
much to Narshakhi and later editors of his work.
A comparison of these accounts with the descriptions
of the modern town (particularly detailed is N.
Khanikov, Oplisanie Bukharskago Knyazstva, St.
Petersburg 1843, 79 ff.) shows clearly that in
Bukhārā unlike Marw, Samarkand, and other cities,
only an expansion of the area of the town and not
a shifting from one place to another, may be traced.
Even after destruction Bukhārā has always been
rebuilt on the same site and on the same plan
as in the 3rd/9th century.

As in most Iranian towns, the Arab geographers
distinguish three main divisions of Bukhārā, the
citadel (NP bukhanida, from the 7th/13th century
known as the arc), the town proper (Arabic maudaemon,
Pers. shahristan), and the suburbs (Arabic rabad)
lying between the original town and the wall built
in Muslim times. The citadel from the earliest times
has been on the same site as at the present day,
east of the square still known as the "Rigistan".
The area of the citadel is about one mile in circum-
ference with an area of ca. 23 acres. The palace of
the Bukhārā Khudāt was here, and, as Iṣṭakhrī shows
(306), it was used by the early Sāmānīds. According
to Mukaddasī (280), the later Sāmānīds only had their
treasuries and prisons there. Besides the palace
there was in the citadel the oldest Friday Mosque,
erected by Kutayba, supposedly on the site of a
pagan temple. Later this mosque was used as a
revenue office (diwān al-kharādā). The citadel was
several times destroyed in the 6/12th and 7/13th
centuries, but was always rebuilt.

Unlike most other towns, the citadel of Bukhārā
was not within the shahristan but outside. Between
them, to the east of the citadel, was an open space
where the later Friday mosque stood till the 6th/12th
century. One may determine what part of the modern
town corresponds to the shahristan for, according to
Iṣṭakhrī (307), there was no running water on the
surface of either the citadel or the shahristan
because of their height. According to the plan given
by Khanikov, this high-lying portion of the town
is about twice as large as the citadel. It had a wall
around it with seven gates, the names of which are
given by Narshakhi and the Arab geographers.

According to Narshakhi (text, 29, trans., 30) at
the time of the Arab conquest the whole town
consisted of the shahristan alone, although there
were scattered settlements outside which were later
incorporated into the city. Narshakhi gives us a
detailed account of the topographical details of the
shahristan. A new Friday Mosque was built by
Arslān Khān Muh. b. Sulaymān in 515/1121 in
the shahristan, probably in the southern part of it
where the Madrasa Mir ʿAarb, built in the 10th/16th
century and the great minaret still stand.

It was not till 235/849-50, according to Narshakhi,
that the shahristan was linked with the suburbs to
form one town and surrounded by a wall. In the
4th/10th century another wall had been built
enclosing a greater area; it had eleven gates, the
names of which are given by Narshakhi and the
Arab geographers.

Besides the palace in the citadel there was one in
the Rigistan from pre-Islamic times. The Sāmānīd
Naṣr II (301-365/914-943) built a palace there with
accommodations for the ten state divāns, the names
of which are given by Narshakhi (text, 24, trans., 26).
During the reign of Mansūr b. Nūḥ (350-365/961-76)
this palace is said to have been destroyed by fire,
but Muḥaddasī tells us that the Dār al-Mulk was
still standing on the Rigistan and he praises it
highly. During the Sāmānīd period there appears
to have been another royal palace on the Dībūl-
Mūliyān Canal to the north of the citadel.

In the reign of Mansūr b. Nūḥ a new muṣallā was
built as the Rigistan could not contain the multitude
of believers. The new area of prayer was built in
360/971 at one-half farṣāḥ (ca. 2 miles) from the
citadel on the road to the village of Samatān.

In the 4th/10th century the town was over-
crowded and insanitary, with bad water and the like
1 Muḥaddasī and some of the poets (al-Tha`lībī,
Narshakhi, Khanikov, St. Petersburg 1843, 79 ff.) show clearly that in Bukhara unlike Marw, Samarkand, and other cities, only an expansion of the area of the town and not a shifting from one place to another, may be traced. Even after destruction Bukhara has always been rebuilt on the same site and on the same plan as in the 3rd/9th century.
Yatima, iv, 8) describe the town in the most scathing fashion.

Narshakhl and the Arab geographers give information on the villages and country around the city. Istakhli (30) gives the names of the canals which led from the Zarafshân to water the fields. According to Narshakhl some of these canals were built in pre-Islamic times and many of the names have survived to the present. Traces also survive of the long walls which were built to protect the city and surrounding villages from the incursions of the Turks. According to Narshakhl (text, 29, trans., 33) these walls were begun in 616/922 and completed in 215/830. The town itself was not in the centre but in the western half of the area enclosed within the walls. After the time of Isma'îl b. Ahmad the walls were no longer kept in repair. At a later period the ruins of these walls were given the name Kanparak, and as Kampir Duwâl ( "wall of the old woman") traces survive to the present on the borders of the steps between the cultivated areas of Bukhâra and Karmina.

On the fall of the Samânids (892-990) the town lost much of its earlier political importance and was governed by governors of the Ilek Khâns or Karâkhânids. In the second half of the 9th/10th century Shams al-Mulk Nasr b. İbrahim built a palace for himself to the south of the city and prepared a hunting ground; it was called Shamsabad, but fell into ruins after the death of his successor, Khîdîr Khân. A musâlà was made of the hunting ground in 513/1121.

Even during the period of decline Bukhâra retained its reputation as a centre of Islamic learning. In the 6th/11th century a prominent family of scholars known as the Aî-i Burhân [see Burhân] succeeded in founding a kind of hierarchy in Bukhâra and making the area independent for a time. After the battle of Kâtâwin (5 Safar 536/9 Sept. 1141) the Karâ Khâtîy ruled Bukhâra through the sâdr (pl. sudr) or head of this family. The sâders maintained good relations with the pagan overlords and in 1207 took refuge with them when they were driven out of Bukhâra by a popular (Shî'î?) rising ("Avâlî, Lubâb, ii, 385). In the same year the city passed under the rule of Muḥ. b. Taqâşî Khâwârizm Shâh. He renovated the citadel and erected other buildings. According to Ibn al-Athir (xii, 239) Bukhara submitted to the army of Cîngiz Khan on 4 Dhu l-Hijjah 616/10 Feb. 1220. The citadel was not taken until 12 days later. The town was sacked and burned with the exception of the Friday Mosque and a few palaces. Bukhâra soon recovered and is mentioned as a populous town and a seat of learning under Cîngiz Khân's successor.

In 636/1238 a peasant revolt occurred under the leadership of one Maḥmûd Sarîb who posed as a religious leader. After initial successes, mainly against the aristocracy, the revolt was suppressed by the Mongols (cf. Diuwayni, i, 86, trans. J. A. Boyle, 100). Little is known of early Mongol rule in Bukhâra; mullas and sayyîds, like the clergy of other religions, were exempted from all taxation. A Christian Mongol princess even built a madrasa called the Khânîyya in Bukhâra at her own expense (cf. Diuwayni, iii, 9, trans. Boyle, ii, 552).

On 7 Radjab 671/28 Jan. 1273 Bukhâra was taken by the army of Abâkâ, Mongol Il-Khan of Persia, and the city was destroyed and depopulated. It was rebuilt and again ravaged in Radjab 716/19 Sept.-18-Oct. 1316 by the Mongols of Persia and their ally the Câghâtâî prince Yasawîr. Bukhâra seems otherwise to have been of no importance in the political life of Transoxania under the rule of the house of Câghâtâî or later under the Timûrids. The Kitâb-i Mulkâsâd of Muḥ. al-Fârâbî, written in the 9th/10th century, gives information about the town in this period (cf. Frye in Avicenna Commemoration Volume, Iran Society, Calcutta 1955). Bahâ al-Dîn Nâkhbândî (d. 791/1389) and his order of dervishîs [see Nâkhbândîyya] flourished in Bukhâra. Ulugh Bêg (d. 853/1449) built a madrasa in Bukhârâ in the centre of town.

Towards the end of the year 905/summer 1500 Bukhâra was taken by the Uzbeks under Shlbâni, from whose title of Khân and remained with them till the Russian Revolution except for two brief periods, after 916/1509 when Shlbâni was killed, and in 1153/1740. The dominions of the Uzbeks were regarded as the property of the whole ruling family and divided into a number of small principalities. Samârkhân was usually the capital of the Khân (usually the oldest member of the ruling house), but the prince who was selected Khân retained his hereditary principality and frequently resided there. Two princes of the house of Shlbâni, ʿUbâydi Allâh b. Maḥmûd (ruled 928-946, 1322-1339), and ʿAbd Allâh b. Iskandar (ruled 964-1006/1557-1598) had their capital in Bukhâra. Through them Bukhâra became again a centre of political and intellectual life. The princes of the next dynasty, the Dînârîs or Ashtarshânîs, also ruled from Bukhâra while Samârkhân lost its importance.

The materials for the history of Bukhâra during the Uzbek period are mostly in manuscripts, such as the Taʾrîkh-i Mîr Sayyid Sharîf Râkhîm from 1113/1703, the Bâdâr-i al-Wâbîsî of Wâsîfî, and the Bahâr al-Arsâr fî Manâkîb al-Âlîyâr of Amîr Wâl (on these works see Storey, 361 ff.). A. A. Semenov has translated into Russian two important works on Uzbek history of special value for Bukhâra, the Ubaydalla-name of Mir Mukhammed Amin Bukhârî, Tashkent 1957, and Mukhammedon istorîyas of Mukhammed Yusuf Munshî, Tashkent 1957.

From the 17th and 18th centuries there was trade intercourse between Russia and the Uzbek principalities. In the 17th and 18th centuries all merchants and emigrants from Central Asia whose settlements were to be found as far as Tobolsk were known to the Russians as "Bukhartsi". The same name was also extended to the inhabitants of Chinese Turkistan which was called "Little Bukharia".

The reign of Khân ʿAbd al-Azîz (1055-91/1645-80) was regarded by native historians as the last great period of their history. After him various princes made themselves independent and the Khân in Bukhâra ruled only a small portion of his former kingdom, and even there the authority was rather in the hands of an Atâlik ruling in his name.

In 1153/1740 Nadîr Shâh conquered Bukhâra but after his death it regained its independence but under a new dynasty, for the Atâlik Muḥ. Râhîm of the tribe of Manîkî had himself proclaimed Khân. His career has been recorded by Muḥ. Wâfî Karînî on the title Twâfî al-Akhrîs. His successor Dânîyâr Bêg was content with the title of Atâlik and allowed a sanâdawâr called the Khânîyya in Bukhâra to bear the sovereign title. His son Murâd or Mir Maṣûm, however, claimed the royal title for himself in 1199/1785 and called himself amîr.

Under his successor Haydâr (1215-1242/1800-26) the observance of religious ordinances was much more harshly enforced than under his predecessors. He was the last ruler of Bukhâra to strike coins in his own name till the last amîr. His successor Naṣr
Allāh (1242-1277/1827-1860) succeeded in strengthening the power of the throne against the nobles and in extending his domains. The native chroniclers agree with European travellers in describing Nasr Allāh as a bloodthirsty tyrant. Instead of tribal levies a standing army was created.

In 1258/1842 the capital of the rival Kāhāhāte of Khokand was taken but the conquest could not be held. When Nasr Allāh’s successor Murāfār al-Dīn (1860-1885) ascended the throne the Russians had already secured a firm footing in Transoxania. After being repeatedly defeated the Amir had to submit to Russia and give up all claims to the valley of the Sir Daryā which had been conquered by the Russians. He had to cede a part of his kingdom, with the towns of Dīzak, Ura-tūbe, Samarqand, and Katta Kurgān (1868) to the Russians. In 1873, however, Bukhārā territory was increased in the west at the expense of the Kāhāhāte of Khīwā. In the reign of ‘Ābd al-Abād (1883-1901) the boundary between Bukhārā and Afghanistan was defined, England and Russia agreeing that the river Pandj should be the boundary. The relationship between Bukhārā and Russia was also defined during the same reign. Beginning 1887 a railway was built through the amīr’s domains but the station for Bukhārā, ten miles away, is now a town called Kagan. In 1910 Mīr ‘Ālim succeeded his father after having been educated at St. Petersburg. He ruled until the Revolution drove him to Afghanistan where he lived in Kābul till the end of World War II. Since the Revolution Bukhārā has become part of the Uzbek SSR with its capital in Tashkent. It has become a large cotton producing area vying with Farghāna and other parts of Central Asia in cotton production.

The archæological and topographical investigation of Bukhārā has made great progress from the 1930s, and the work of Shīkhīn, Fugachenkova, Sukhareva, and others, has greatly added to our knowledge. The existing architectural monuments of Bukhārā which are of importance are: 1) the “so-called” mausoleum of Ismā‘īl ʿAbānī from the 4th/10th century; 2) the minaret-i kalān, 148 ft. (45.3 m.) high (6th/12th century); 3) Mosque of Maqākī Attār (the last construction of which dates from 1547); 4) Mosque of the Namāzgāh (musalla), dating from 1119 A.D.; 5) Mausoleum of Sayyid al-Dīn Bukhārā (d. 1261); 6) Mausoleum at the site of Čaḥmā Ayyūb (end of 14th century); 7) Madrasa of Ulūgh Bēg, restored in 1585; 8) Maṣjid-i kalān, 16th century with the older minaret nearby; 9) Madrasa Mir ‘Arab (of 1535); 10) Maṣjid Khwādja Zayn al-Dīn, many times restored. Other monuments exist in great numbers outside the town, mostly in ruins.

(B. W. BARTHOLOWE[R. N. FRYE])

AL-BUKHĀRĪ, MUHAMMAD B. ISMĀ‘ĪL

Abū ’l-Ma‘ālī ’Allāh al-Dīn al-Makki, Arabic writer who in 901/1535 composed a treatise on the eminence of the Abyssinians (after al-Suyūtī and others), entitled al-Tirās al-Munabbī fi Mathān al-Hā‘ābī and existing in numerous manuscripts. The work has been translated by M. Weisweiler, Buntes Prachtgewand . . ., Hanover 1924; extracts from the text in Bibliotheca Bodleiana cod. miss. or. coll., ii, 2163. An extract, by Nūr al-Dīn al-Ḥalābī (d. 1044/1635?); 8 al-Ḥalābī, Nūr al-Dīn) was printed in Cairo, 1307.

AL-BUKHĀRĪ, MUHAMMAD B. ISMĀ‘ĪL

Abū ’l-Mu‘āhib B. Bardizbāgh Abū ’abd Allāh al-Dū‘ūfī, a famous traditionalist, b. 1294/1879, d. 1360/1928. In 1873, however, Bukhārā was taken but the conquest could not be held. When Nasr Allāh’s successor Murāfār al-Dīn (1860-1885) ascended the throne the Russians had already secured a firm footing in Transoxania. After being repeatedly defeated the Amir had to submit to Russia and give up all claims to the valley of the Sir Daryā which had been conquered by the Russians. He had to cede a part of his kingdom, with the towns of Dīzak, Ura-tūbe, Samarqand, and Katta Kurgān (1868) to the Russians. In 1873, however, Bukhārā territory was increased in the west at the expense of the Kāhāhāte of Khīwā. In the reign of ‘Ābd al-Abād (1883-1901) the boundary between Bukhārā and Afghanistan was defined, England and Russia agreeing that the river Pandj should be the boundary. The relationship between Bukhārā and Russia was also defined during the same reign. Beginning 1887 a railway was built through the amīr’s domains but the station for Bukhārā, ten miles away, is now a town called Kagan. In 1910 Mīr ‘Ālim succeeded his father after having been educated at St. Petersburg. He ruled until the Revolution drove him to Afghanistan where he lived in Kābul till the end of World War II. Since the Revolution Bukhārā has become part of the Uzbek SSR with its capital in Tashkent. It has become a large cotton producing area vying with Farghāna and other parts of Central Asia in cotton production.

The archæological and topographical investigation of Bukhārā has made great progress from the 1930s, and the work of Shīkhīn, Fugachenkova, Sukhareva, and others, has greatly added to our knowledge. The existing architectural monuments of Bukhārā which are of importance are: 1) the “so-called” mausoleum of Ismā‘īl ʿAbānī from the 4th/10th century; 2) the minaret-i kalān, 148 ft. (45.3 m.) high (6th/12th century); 3) Mosque of Maqākī Attār (the last construction of which dates from 1547); 4) Mosque of the Namāzgāh (musalla), dating from 1119 A.D.; 5) Mausoleum of Sayyid al-Dīn Bukhārā (d. 1261); 6) Mausoleum at the site of Čaḥmā Ayyūb (end of 14th century); 7) Madrasa of Ulūgh Bēg, restored in 1585; 8) Maṣjid-i kalān, 16th century with the older minaret nearby; 9) Madrasa Mir ‘Arab (of 1535); 10) Maṣjid Khwādja Zayn al-Dīn, many times restored. Other monuments exist in great numbers outside the town, mostly in ruins.

also contains other material, such as on the beginning of Creation, on paradise and hell, on different prophets and, in greater detail, on Muhammad, on Kur'anic commentary, etc. Although al-Subki includes al-Bukhari among the Shihâb, this is not accurate, for he did not hold consistently the doctrine of any particular school. The titles of the bâbân are meant to indicate the subject-matter and teaching of the traditions they contain, but al-Bukhari has sometimes been criticised because the contents of the traditions do not always seem to be relevant to the title. Some bâbân have a title but no traditions, which may mean that al-Bukhari drew up the scheme of his book and left blanks when he had no scound traditions to illustrate a particular subject, hoping that he might yet find some relevant material of sufficient authority. There have been many commentaries written on the whole or part of the Shihâb, notable among which are those of al-Ayni, Ibn Haldar al-Askalânî and al-Kâtâlînî. While the Shihâb was considered in al-Bukhari's time as just one among others, it was soon recognised as outstanding, and by the 4th century it came to be placed along with Muslim's Shihâb at the head of collections of Sunni tradition. In time, although criticisms have been made on matters of detail, it was accepted by most Sunnis as the most important book after the Kur'an; but in the West there was a tendency to prefer Tâlîmîn's Shihâb. Al-Bukhari wrote his Tavâkhâr, which gives biographies of the men whose names appear in isnâds, when a young man, saying he wrote it on moonlight nights at the Prophet's tomb. Other smaller works are detailed by Brockelmann. In his lifetime al-Bukhari was recognised as an outstanding traditionist, noted for his minute knowledge of detail and his perspicacity in detecting defects in traditions.

**BUKHÂRLIK** (or Bugharlits of Siberia). A small ethnic group, Muslim (Sunni of the fiânaî school), made up of the descendants of merchants and caravanners originating from Turkestan and established in western Siberia since the 16th century, when the commercial relations between the Emirate of Bukhârâ and Siberia were flourishing.

The Bukhârlîs live in contact with the Tatars of Siberia [q.v.] to whose Islamisation they have contributed, and with whom they are gradually mingling. They live principally near Tobol'sk, Tumen and Tarâ, and an isolated group of Bukhârlîs are found close to Tomsk. In 1926, the Soviet census numbered 12,012 of them. The Bukhârlîs speak the local Tatar dialects, but with the difference that they preserve in their own speech a large number of Persian terms. They employ the Tatar of Kazan as their literary language.

Bukhârlî (Ar.; also vocalised bakhârî, bakhâlî, bakhâlî, bukhalî and bakhîlî; pl. bakhâhlî; less often bakhîlî, pl. bakhâhlî) mean respectively 'avarice' and 'avaricious, miserly'. Just as in the ancient poems the virtue of generosity is constantly sung, so avarice furnishes a theme for satire which is widely exploited by the poets, though it seems that this fault, at least in its most sordid forms, was scarcely widespread among the ancient Arabs. It is however a fact that it is castigated in a number of Kur'ânic verses aimed at combating avarice in the full sense (xvii, 102/100; lii, 24) or simple hoarding (ix, 35, civ, 1 ff.), or at the encouragement of generosity in general (ix, 77/76; lix, 9) and almsgiving in particular (iii, 40/38, 175/180; iv, 127/128; lxv, 16 ff.); moreover, numerous hadâds against avarice are attributed to the Prophet, especially ayyâ da'ârâ adwa 'min al-bakhlî?). These condemnations and exhortations, however, seem to result less from an absolute moral principle than from the necessity in which the newly-founded Islamic community found itself of receiving spontaneous gifts and then of collecting regularly the contributions of its members (see Sàdakà, Zakât, and cf. bâb al-zakât in the hadâd-collections).

After the conquests the Arabs were brought by the entry into Islam of new racial elements into contact with peoples of a somewhat different temperament, and when, brought before the bar, they had to put up a defence, shrewder minds did not fail to sing out the generosity of the Arabs in order to contrast it with the avarice of the non-Arabs. It is doubtless not by mere chance that, under the 'Aabâsî, it is the Kûrânsâns who supply the analogies with anecdotes about misers. The relationship: generosity=Arabs/avarice=non-Arabs takes practical shape in the polemics of which al-Dâjjîz gives several specimens in his remarkable Kîdâb al-bakhlâh, the first and probably the only attempt in Arabic literature to analyse a character and portray him through anecdotes, though with political undertones. This psychological analysis which had its origin in al-Dâjjîz, was ignored by later writers who, in their adab-books and then in the popular encyclopedias, confined themselves to reproducing the Kur'ânic verses, hadâds, anecdotes, and poems about misers (see for example Ibn ʻAbd Rabbih, ʻIbâd, passim; al-Abghûlî, Mustârraf, i, 233), but omitting, however, to mention that history knows but four (sic) Arab misers: al-Ḥûṣayn, Ḫumayd al-ʻArâqî, Abu ʻl-Aswad al-Duṣâlî, and Khalîl b. Šafwân. (C. Pellar)

Bukht-Nâsî shar, the Neuhchadnessar of the Bible. The Kur'ân does not mention him. He is a very complex figure in Muslim tradition and here we can record only the outstanding points. It retains in the first and probably the only attempt in Arabic literature to analyse a character and portray him through anecdotes, though with political undertones. This psychological analysis which had its origin in al-Dâjjîz, was ignored by later writers who, in their adab-books and then in the popular encyclopedias, confined themselves to reproducing the Kur'ânic verses, hadâds, anecdotes, and poems about misers (see for example Ibn ʻAbd Rabbih, ʻIbâd, passim; al-Abghûlî, Mustârraf, i, 233), but omitting, however, to mention that history knows but four (sic) Arab misers: al-Ḥûṣayn, Ḫumayd al-ʻArâqî, Abu ʻl-Aswad al-Duṣâlî, and Khalîl b. Šafwân. (C. Pellar)
Temple) and some elements of a folklore character (an obscure Babylonian man of the people, for a long time hopelessly ill, he believed that he heard his future glory proclaimed and achieved it by his intelligence and a remarkable concurrence of circumstances). In the second place he is found forming part of the epic cycle of the ancient kings of Persia (the deformation of the name of which Bukht-Nasār is the result seems to indicate some imaginary Iranian etymology); he is then reduced to the rank of satrap (masābān) of Bīghtāsāb or of his father (Lūhrāsāb), or even of Bahram, the son of the first named. In the third place he is said to have led an expedition against the Arabs (to which Kurānān uses 111 fl. would refer). There is perhaps here a memory of Nabonidus's settlement at Taymānī (cf. above, art. AL-‘ARAS) combined with that of Arab infiltrations into the region of the Euphrates. Al-Maṣūdī and al-Bīrūnī know an era of Bukht-Nasār (cf. the article of Carra de Vaux in EJ). Al-Bīrūnī sought also to disentangle the chronological difficulties raised by the confused traditions of which he had knowledge.

Tannery, Recherches sur l’histoire de l’astronomie ancienne, Paris 1893, 153, 162.

**BUKHTISHŪF,** the name borne by several physicians of a celebrated Christian family originally established at Diūndaysābūr. It was from there that Djiḏrīs b. Djiḏrīl b. Bukhtishūf, who was director of the hospital of this town and well known for his scientific writings, was called to Baghdād in 148/765 to attend the caliph al-Manṣūr, ill with a stomach complaint. By successful treatment he won the confidence of the sovereign, who asked him to remain in the capital, but he wished to revisit his native land in 152/769.

Bukhtishūf b. Djiḏrīs, to whom his father had left the direction of the hospital at Diūndaysābūr at the time of his departure for Baghdād, was called in his turn to the capital when the future al-Hāḍī was gravely ill, but the hostility of al-Khayzarūn, who favoured the physician, difficulties raised by him from establishing himself there. Nevertheless, in 171/787, Ḥārūn al-Raṣḥīd, suffering violent pain, had him brought back to Baghdād and appointed him physician-in-chief, a post which he held until his death in 185/798.

Afterwards Djiḏrīl b. Bukhtishūf, whom his father had recommended to Djaḏrīt al-Barmakīsīd in 175/791, succeeded in 190/805 in winning the confidence of the caliph, following a successful treatment of one of his slaves, but he fell into disgrace during the last illness of Ḥārūn at Tūs, because he did his duty as a doctor with too much frankness. He was condemned to death by the caliph because of the accusations of a bishop, but was saved by al-Fadl b. al-Rabūf, who stayed the execution of the sentence, and he then became al-Amīn’s physician. At the time of al-Maṣʿūdī’s triumph he was imprisoned, not to be set at liberty until 202/817, when al-Hasan b. Saḥil had need of his services. Three years later he was again in disgrace, and was replaced by his son-in-law Mihkhaḥī, but was recalled in 212/827 because Mihkhaḥī was unable to cure an illness of the caliph. He was reinstated, and his goods, confiscated after his fall, were restored, but he had not long to enjoy the prince’s favour for he died the same year, and was buried at al-Madā’in in the monastery of Sirgūs.

His son Bukhtishūf, who took his place, accompanied al-Maṣʿūdī on his expeditions into Asia Minor, then, under the caliphate of al-Wāḥīkī, was exiled to Diūndaysābūr. Recalled during the caliph’s last illness, he arrived in the capital too late, but remained there highly esteemed for twelve years, under al-Mutawakkīl, until his exile to Bahrain. He died in 216/830.

Bukhtishūf had a son, ‘Ubayd Allāh, who was a finance official of the caliph al-Muhtadīr, and whose fortune was confiscated after his death by the caliph and his widow married a physician, and his son Djiḏrīl followed in the footsteps of his fathers, but received his training only in Baghdād, where he had betaken himself penniless after his mother’s death. Having treated an envoy from Kīrmān successfully, he was called to Shirāz by the Buwayhid ‘Aḍūd al-Dawla, but returned to Baghdād, which thereafter he only left for short periods of consultation, during which the offer of the Fāṭimid al-A‘ṣrī who wished to establish him in Cairo. He was, however, retained at Mayyāfārīkūn by the Marwānīd Mumahhīd al-Dawla Abū Manṣūr who had summoned him there, and he died on 8 Ramadān 396/8 June 1006.

Abū Sa‘īd ‘Ubayd Allāh b. Djiḏrīl, a friend of Ibn Butlān [i.e.], lived at Mayyāfārīkūn and died in the second half of the 3rd/10th century, leaving some known works, in particular a dictionary of medico-philosophical terms and a treatise on love.

Another member of the family, Bukhtishūf b. Yahlīs, was physician to the caliph al-Rādī and was held responsible for the death of prince Hārūn in 324/936.

**BÜKIR** [see ARĪRIG].

**BUKOVINA** [see KHOΤIN].

**BUKHARAT** [see SUPPLEMENT].

**BÜKRESI (Bucharest)** a town in Wallachia on the Dâmbovița river about fifty km. north of the Danube. It is mentioned for the first time in 769/1368 by the name of Cetatea Dâmboveți, a name used since by side with Bucharest until the 15th century, when it became the seat of the Wallachian princes. Vlad the Impaler issued documents from there in 865/1459 and 865/1461 and Radu the Handsome, the prince installed by Mehmed II in 866/1462, established himself in that town, protected by a Turkish garrison from Giurgiu. For more than two centuries the history of Bucharest was linked to the relations of the Romanian princes with the Porte. Those princes who rebelled against Ottoman suzerainty preferred Târgoviște, less exposed to Turkish raids. At the end of the 16th century, Bucharest witnessed the massacre of Michael the Brave's creditors and Sinān Pasha's occupation. Solely tried by the revolts against the Turks, as well as by epidemics and fires, the city had a turbulent history, With the Treaty of Berlin (1877) the last vestiges of Ottoman suzerainty disappeared. The peace conference convened at Bucharest in 1913 relieved Turkey of the greater part of her European possessions.
Information on the population during the earliest periods is lacking. The sources mention the presence of Greek, Armenian and native merchants. Towards 1590/1640 Bucharest had 12,000 houses; fifteen years later only 6,000 are mentioned, and Ewilya Celebi speaks of 12,000 houses and 1,000 shops. During the 17th century the population of Balkan origin increased, and became quite significant in the 18th. Popular revolts broke out, inspired by members of corporations discontented with the competition of foreign traders protected by the Phanariot princes. At the end of the 17th century the town had 50,000 inhabitants. The number varied between 20,000 and 60,000 for the end of the 18th and between 30,000 and 100,000 for the first half of the 19th.

Absorbed for three centuries in the Ottoman Empire, Bucharest acquired an oriental imprint which became stronger under the Phanariots during the 18th century, when the town became an important centre for the study of Greek. The princes initiated the publication of religious books for Christians in the Ottoman Empire, and monastic revenues provided for the monasteries of Athos, Constantinople, Trebizond and the Holy Land. The Austrian and Russian occupations introduced the first occidental influences and a knowledge of French, which, in the first half of the 19th century, supplanted Greek. Under the impact of ideas engendered by the French Revolution, the town became the centre of the struggle for the political unity of Roumania which led to the union of Moldavia and Wallachia (1859).

BUKŪM, al- (sing. Bašmil, a tribe in Western Arabia, traditionally held to have descended from Al-Azd. Although considered a Hijāzī tribe, the Bukūm range over the region east of Al-Ṭāfīf and in the vicinity of the lava fields of Harrat Hadd and Harrat al-Bukūm, where the boundaries between the Hijāz and Najd are not clearly defined. The tribe is estimated to have close to 10,000 people, of whom less than half are nomads. For at least several centuries a majority of the Bukūm have been engaged in oasis cultivation in the district of Wādi Turaba (also Turaba), with the town of Turaba (N. 21° 14', E. 41° 37') being their main centre of population. The Bukūm are subdivided into two sections: al-Maḥāmīd and Al Wāzīf.

During the early period of Wahhābī expansion, the Bukūm were partisans of the Sharīf Ghālibī in his wars against Najīd. From 1228/1813 the Bukūm defended their territory against the troops of Muhammad ʿAlī, the Ottoman Viceroy of Egypt, during which campaign a woman named Ghaliyya notably distinguished herself. The Bukūm finally surrendered and Turaba was occupied in 1230/1815. In the early years of the present century the loyalty of the Bukūm was divided between ʿAbd al-ʿAzīz Ibn Saʿūd and the Sharīf Husayn, the Maḥāmīd having declared for the Sharīf, while Al Wāzīf fought for Ibn Saʿūd. The Maḥāmīd surrendered to Ibn Saʿūd after his victory at Turaba in 1337/1919, and members of both sections of al-Bukūm participated in the later Saʿūdī campaigns in the West.

BULĀK, a small town quite close to the Cairo of Mamlūk and Ottoman times, and its port on the Nile for traffic with Lower Egypt. It was built on the sand which the Nile left when its bed shifted one to one-and-a-half kilometres westwards between the time of Saladin and the 8th/14th century [see AL-KĀHIRA]. It was separated from Cairo by the Nāṣīrī canal, dug in 725/1325 by the sultan Muhammad b. ʿAlāʾūn, who encouraged people of affluence to build their villas (mansūra) at Būlāk, to which were added later mosques, hammāms, etc. The customs transferred there from Cairo. About 1800 Būlāk had some 24,000 inhabitants, 24 mosques (including that of Abu ʿl-Sāhir, a place of pilgrimage and maṣṣuṭ), ‘okelles’, dépôts for agricultural products, shipyards, etc. Muhammad ʿAli built workshops and foundries there, designed to modernise Egyptian life. Būlāk is well known for its printing works, the first established in Egypt after the short-lived ones of Bonaparte’s expedition. A small Egyptian team, trained at Milan, returned in 1821 with presses. In 1822 the Būlāk Printing Press was able to work at full capacity, under the direction of Nicolás al-Masābkī, of Lebanese origin (d. 1830). Owned by the state, modernised several times, it was transferred to private ownership in 1862 (to ʿAbd al-Raḥmān Rūshdī Pāhīn, then in 1865 to a son of the Khedive Ismāʿīl). The state took it over again in 1880, and it was further developed after 1894 under Egyptian direction, under Egyptian Egyptian once more. It was founded for army needs (manuels, etc.) and for the administration (official journal, al-Wākīn’ al-Misriyya) and was an important factor in the modern Renaissance. It printed on its own account or on that of individuals translations and numerous classical works in Arabic, Turkish, and Persian, and some books in European languages. The rapid growth of the private presses which made Cairo the centre of the Arabic book trade eventually deprived it of the virtual monopoly which it enjoyed. At the present time Būlāk is no longer anything more than a quarter of modern Cairo.

BULANDSHAHR (BARAN), an ancient town in India situated in 28° 15' N. and 77° 52' E. on the main road from Agra and Aligarh to Meerut. Population (1951) was 34,496. Its old name was Baran (by which it is now sometimes called but only in the nīsba Baranī) given to it by its legendary founder, one Ahībaran. Its antiquity is
established by the discovery of inscribed copper-plates of the 5th century A.D. and coins of much older dates. It came to be called Bulandshahr ("hightown") from its elevated position near the bank of the Kali Naddi, which flows past the town. This name is clearly Muslim and appears to have been given to the town sometime during the Mughal period, although Sudjan Ray's Khuldsat al-Tawdrlkh (compiled as late as 1107/1695-6) still mentions it as Baran. It was conquered by Mahmud of Ghazna in 409/1018 when the Hindu Radja, Har Datt, offered submission and accepted Islam with 10,000 of his followers. The town was restored to Har Datt whose descendants forsook Islam and Candra Sen, the last of the line, was killed while defending the town in 590/1193 against Kutb al-DIn Aybak, a general of the Ghurt Sultan Muhammad b. Sâm, who bestowed it as an ikthd* [q.v.] on his son-in-law and successor. Djaypal, a kinsman of Candra Sên, accepted Islam and was rewarded, for betraying the garrison to the invaders, with the headmanship of the town. His descendants still flourish in Bulandshahr. During the reign of Muhammad b. Tughluq [q.v.] it was the centre of a peasants' rebellion; this was ruthlessly suppressed by the king who laid waste the country all around and perpetrated horrible atrocities on the residents of Baran. In 802/1400 the rebel Amir Ikbâl Khan (Faḍl Allâh Bakhl) took refuge here when he rose against Sultan Nasir al-DIn Mahmûd (644/1246-665/1266). In 810/1407 the town was occupied by Sultan Ibrâhîm Shah Shard of Djownpur (805/1399) but he had to vacate it hastily on learning that Munâfîr Shah I of Gudjarat was about to attack Djownpur.

Thereafter nothing is heard of the town as it continued to enjoy a period of peace and tranquillity during Mughal rule. Awrangzib's proselytising zeal won a large number of converts, mostly among the Radjputs, in and around Bulandshahr. During the 12th/18th century when the entire country was disturbed the Marâthas overran and captured Bulandshahr and administered it from Koli ("Alligarh"). With the fall of the fort of Alligarh, Bulandshahr came into the possession of the British in 1818/1853. During the upheaval (Mutiny) of 1857 the town was badly disturbed and Walâdâd Khan of Mâlâgâr drove out the British garrison and assumed the reins of government. He and his confederates, the Gudjârs and Muslim Râjpûts, proved irreconcilable enemies of the British and surrendered the town only after a five months' resistance. This town is familiar to students of Indo-Pakistan history as the birth-place of Diya al-DIn Barani [q.v.], the scholar-historian of the 9th/14th century. There are some very old mosques and tombs including a dargâh that of Khâdîja Lâl Barani, which was built in 590/1193 to commemorate the Muslim victory. A small town at the commencement of the British rule, it is now a thriving centre of trade and commerce.

Bibliography:

(A. S. BAZMEE ANSARI)

BULAY, the Arabic transcription of Poley, the old name of a stronghold in the south of Spain the site of which (as has been shown by Dozy, Rech.4, i, 307, on the strength of information supplied by a charter of 1258) is the modern Aguilar de la Frontera, a small town in the province of Cordova, 12 miles N. W. of Cabra and of Lucena. The town, which played a considerable part in the rising of the famous Umar b. Hafsûn [q.v.] against the Umayyad amirs of Cordova, is again mentioned in the 6th/12th century by the geographer al-Idrisî.

(E. LÉVI-PROVENÇAL)

BULAYDA (BLIDA), a town in Algeria 51 kms. S.-W. of Algiers, at the southern end of the plain of the Mitidja. There was no ancient settlement on the site. It has been identified with the town Mitidja known in the Middle Ages, which was ruined at the time of the campaigns of Banû Ghâniya (beginning in the 7th/13th century). According to tradition the place which in 942/1535 was called Bulayda (little town) was founded by a religious personage known as Sidd Ahmed al-Kabîr. He, after many wanderings, came to stay in the valley of the Wâdi al-Rumâmân, nowadays the Oued el-Kebir. He was joined by his disciples, then by Andalusians coming from Tipasa fleeing from the attacks of the Kabyles of the Chenoua. Sidd Ahmed al-Kabîr obtained from the Ulâd Sultan who occupied the region the land necessary to build homes for the new arrivals. The beylerbey of Algiers, Khayr al-DIn, made of this settlement a veritable city, by providing it with a mosque, hammâm, public baths and bazaars. Bulayda prospered quickly thanks to the Andalusians, who planted orange orchards around it and applied there methods of irrigation of their own country.

Under Turkish domination Bulayda formed part of the dâr al-sulûl, that is to say the region administered directly by the bey of Algiers, who was represented there by a bakîm of Turkish origin. A detachment of janissaries had a garrison there. The population, composed of the descendants of the Andalusians, Moors, Jews, and Mozabites, was renowned for its urbanity and love of pleasure. A saying attributed to Sidd Ahmed b. Yüsûf praises it and calls it Urîda (little rose). The town offered a pleasant sojourn to the élite of Algiers, who were interned there found their exile easy to hear. It suffered many earthquakes, of which the most severe almost entirely destroyed it in 1827. The town was shaken again by a tremor in 1865.

After the occupation of Algiers by the French, Blida remained for some time independent under the administration of its bakîms. It was effectively occupied in 1839.

(G. YVER-[G. MARÇAIS])
BULBUL, the nightingale. To the nightingale belongs a large place in Oriental literature, particularly Persian and Turkish literature. The characteristics of the bird are its beautiful voice and its tuneful and harmonious song. In the season of roses it laments the whole night long; the hours before dawn are enlivened by its singing. It is in love with the rose. This love is its most outstanding characteristic. Its other characteristics are grouped around this.

In Persian literature the nightingale is treated according to the poet's inclination. In some it sings of figurative love which has no aim, in others of figurative love which is a stage on the path to real love. To understand its meaning in Sufi writing, we must look at the Mantık-i Taşrī, written in the year 583/1187-8 by one of the important Sufi writers of Persian literature, Farīd al-Dīn Āṭṭār (died 607/1209). In this work the nightingale's main characteristic is that it is drunk and ready to lose its material substance because of the perfection of its love for the rose (see Garcin de Tassy, Le langage des oiseaux).

The Persian poet Khwādžū Kirmānī (679-752/1280-1351), in a work entitled Rawdat al-Anwār, represents the bird of the meadow (murgh-i zamān) as a bird tried by passion and desire, that sings at night and drives away sleep; then he likens the nightingale and the rose to the fabulous lovers Wāmiḵ and Āḏḏārā. In a ḥīfā of Sa’dī of Shirāz (died 690 or 691/1291-1292), who speaks of the nightingale fairly often especially in his ghazals, the poet treats the moth as the real lover. Ḥazīn-i Lāhījī (died 1180/1766) makes clear the contrast of the nightingale and the moth, saying, "The nightingale complains because it has only just learnt of love. We have never heard a sound from the moth". Mawānān Rūmī-ī Barizī has a work too (tadhkira) of Shāh Muhammad Kāzwīnī which contains disputes between nightingale and rose, candle and moth. The Persian poet Zamān-ī Yazdī also confronts the nightingale and the moth.

Hāfīz (died 791/1386) raises the nightingale somewhat towards real love in this verse: "Settling on the cypress branch last night the nightingale chanted the lesson of spiritual stations with the Pahlawi warcary", One of the poets of the circle of Mahmūd of Ghaṣna, Farrūqī-i Sistānī (died 470/1077), also imagines the nightingale on a cypress branch: "Nightingales are khatībūs reciting ḥudūs upon trees". "Now the nightingale recites the Taʿwārī on the cypress.

In one of his ḥasīdas Manūcēhrī (died after 423/1034) gives its song a religious significance, saying "On the rose branch the nightingale performs the ḥalādī". In Anwārī (died after 580/1184) a characteristic of the nightingale is its eloquence; "The nightingale catching the scent of spring has grown eloquent, the rose entering the garden has grown fresh".

The Persian Sūfī poet Muḥammad Shīrīn Mağribī (died 809/1404) likens the soul to the nightingale, fallen into the cage of flesh. Here the cage of flesh is the spirit, that has fallen from the world of unity into the world of elements. Another Sūfī poet, Kamāl Khudjmāndī (died 803/1400), brings out another characteristic of the nightingale in the verse: "Kamāl recites no ghazals unless he has fallen in love with a face of roses. The nightingale does not sing when it is not drunk". Sa’dī too in one of his ghazals puts spring and the nightingale side by side: "The trees are in bud, the nightingales are drunk, the world has grown young, the lovers are lost in joy and merrymaking". He views the nightingale essentially as the harbinger of spring. The giver of bad news is the owl. Hilālī-ī Caghatāy (died 939/1532) also makes this contrast in the verse: "The nightingale nests in the garden, the owl in the ruins, everyone makes his home according to his desires". It is appropriate in this connexion to mention the proverb: "Of the nightingale's seven chicks only one becomes a nightingale" (Dihkhuda, Āmālī wa Ḥikām).

The nightingale has provided an opportunity for more delicate and refined conceits among poets writing in the 'Indian style'. In this literature with its generally Sūfī colouring, the nightingale occupies a position between figurative and real love. The seventeenth century poet Shawkat Buğhāri sings thus of the nightingale in one of his ghazals: "How long will the beloved fail to recognise the lovers that are its prisoners? As the nightingale sorrow's and sheds its tears its nest comes to resemble a basket of roses. The rose branch is a seat that gives rest to the nightingale's aching head".

The idea that the nightingale is hunted and caged because of its beautiful voice has passed into literature; thus in a verse of Begdīl (1134-1105/1722-1781): "Because of its lament it is captured and deprived of its freedom".

The bird is encountered in the oldest Turkish literary texts. In various Turkish dialects the nightingale is called as follows: in the Kutadgu Bilig, sanval, sinvaal, sanduval. In other dialects saducal (gec, Kuz), sandigal (Tel.), sandval (Rab.), sanduval (S.S.). In his Dictionary, Shakh Sulaymān Buğhāri Caghatāy mentions this as a bird like the nightingale and explains that it is the canary. The verse in Kutadgu Bilig (1069/1707) "The nightingale sings in the flower garden in thousands of voices (hasār destān) as though reciting the Māzāmir night and day" (v. 78) recalls the Pahlawi warcary and the Tawādī just as we found in Persian literature.

Entering the Islamic period, Turkish literature in time lost the sanduval and used in its place the words sandalih, hasar (only in classical literature), and bülbul (in both classical and folk literature). In folk literature the nightingale is the lover of the rose, it is a stranger, in spring time it sings at night and before the dawn (Karadja Ogłan). In both folk and classical literature the nightingale in the cage is like the soul in the body. The characteristics of the nightingale in Turkish Divān literature may be seen in the mathnawi "The rose and the nightingale" composed by Fadlī for Sultan Suleymān's son Mustafā (960/1553). According to this work the nightingale "is a heart-sore and agitated dervish, love is its nature. Its voice is lovely, its ways are pure and charming. It is a witty fellow, a drinker. Love is the place of its frequenting. Love has set a polish on the mirror of its heart. Its dress is a dervish's cloak of felt (namad) so that the mirror inside the felt may not grow rusty". After numerous adventures the nightingale and the rose are united. In this work Fadlī uses the nightingale to express a purely Sūfī idea. In this allegorical treatment the nightingale is the heart, the rose the spirit.

When we come to Divān literature of the seventeenth century, the nightingale is a lover consumed by the fire of love. This is embodied in the poetic concept that the rose resembles fire in its colour, and kindles the nightingale and burns it to ashes. The nightingale is the colour of ash. There is a pun
between gul, rose, and kül, ash. The elimination of the material existence of the lover (tossing up his ashes) is an idea that comes from Sufism. Consequently the likening of the nightingale to ashes is an idea that comes from Sufism. Consecutively the likening of the nightingale to ashes has become so firmly established that the word bhakhista, ash, has come to mean nightingale.

The ghazal with the rediif "bulbul" by Na'îlî (died 1634) and Naqshî (died 1674) are both major works of the literature of that period, tending towards the Indian style. The last verse of Na'îlî's ghazal reveals to us the Şifî connexion of the nightingale and the rose.

In the 18th/19th century Nedîm (died 1743/1730) mentions this bird in a number of his poems. In a ghazal with the same rediif he writes: "Do not suppose that the nightingale's nest is filled with bloody tears. That nest is a pot of red ink made ready to write down the secrets of longing. Do not fancy that the cup-bearer of spring poured dew upon the rose; he filled the nightingales' cup with rahî!"

After the Tanjimdât, in the poets of the Âdîgîm-e-i Shawkâr who imitated older literature, the nightingale shows no new development. Like Maghibî among Persian poets, one of these, Herseker bî Yaṣîr Işık (1839-1902), in a poem entitled Ḥabî-b-i Ǧâlî, treats the nightingale from an entirely Şifî point of view. Reşîdî's poem with the rediif "bulbul" bears the somewhat shallow marks of his melancholy temperament and tender poetic gift. In these there is nothing new. But ʿAbd al-Ḥaḳḳ Hâmil [q.v.] in the nastâre he wrote to Herseker's Ḥabî-b-i Ǧâlî, and in the poem Walking through Hyde Park, produces new ideas appropriate to his age with regard to the nightingale: "In the morning it recites the adhîn. Its nest in the darkness is a sublime symbol for patriotism. Its songs have become the model for love-bhâstas. The form of its expression is as new as modern literature (teddîddu edebiyydti). It is God's poet. Its bâstâdas are read from the page of nature" (Nastîne Ḥabî-b-i Ǧâlî).

(Âlî Niḥât Tašlân)

BULDUR [see burdur].

BULGARIA, a country in the Balkans. It drew its name from the Bulgars, a people of Turkic origin, who first invaded Europe under Asparukh or Isperikh in 679 A.D. and founded an independent state in the Byzantine province of Moesia. Adopting Orthodox Christianity from Byzantium (865) and identifying themselves with the native Slavs who had previously settled Bulgaria, the Bulgars built up a strong empire in the Balkans which extended from the Danube to the Adriatic Sea under Çzar Symeon (977-997).

The first Islamic accounts of Bulgaria belonged to this period through the reports of Muslim al-Diarrîl (about 231/85), Harûn b. Yahyâ (349/960) and İbrahîm b. Yaṣîkub (349/960). Harûn reported (in Ibn Rusta, ed. De Goeje, 127) that the Christianized Slavs, al-Salûbîa al-Mutanâssîra, had adopted Christianity after Sûn, the ruler of the Bulgars. Incorporated into the Byzantine empire between 1018 and 1186 Bulgaria was organised in two themes, the theme of Bulgaria with its centre at Skoplje (Şşkub) and that of Paristrion or Paradun-avon with its centre at Silistrâa.

The invasion and settlement of the Cumans in the lower Danube prepared the way for the creation of the so-called second Bulgarian empire under the Asenids (1285-1320).

In 1362 Michael VIII, the Byzantine emperor, took Anchialus and Mesembria from the Bulgarians and settled in the Dobrudja the Anatolian Turks who had taken refuge in Byzantium with ìzz al-Dîn Kaykawsîî [q.v.]. Most of them returned to Anatolia in 707/1307 and those who remained were thought to be the ancestors of the Gagauzes [q.v.]. (P. Wittek, Yastîlgüllü: Ali on the Christian Turks of the Dobruja, in BSOAS, xiv/3).

Terter I (1279-1300) recognised Noghay's [q.v.] overlordship (1285) and gave his daughter in marriage to his son Çaka, who later took refuge in Trnovo and seized his father-in-law's throne (1300), but soon was killed by Terter II (1300-1322).

In the contemporary Arabic sources (Baybars, Zubdat al-Fîbira, in I. H. Izmirli, Altnordus ..., Ist. 1941, 221; Abu 'l-Fidâ, 295) Bulgaria is shown as the land of the Ülak. We know that Kalojan had called himself imperator totius Bulgarie et Vlachie (G. Ostrogorsky, Hist. of the Byzantine State, 358). It appears that the Christianised Cumans in Bulgaria, must have been shown under the general term of Vlach.

The Shishmanids (1323-1395) came to the Bulgarian throne with Shishman, a Cuman magnate in Vidin.

The Anatolian ghâzi Turks came in contact with the Bulgarians when Aydınlâhî Ümûr [q.v.] allied himself with Cantacuzenus. First in 742/1341 Ümûr aided him against Ivan Alexander, the Bulgarian Çzar, and, then, on 12 July, 1345 destroyed Momcilo, the Bulgarian adventurer who had been dominating the Rhodope region (P. Lemere, L'Emirat d'Aydin, Paris 1957). The Ottomans replacing Ümûr in his alliance with Cantacuzenus appeared to come into contact with the Bulgarians first in 753/1352 when these came to support his rival John V. After the conquest of Edirne [q.v.] in 764/1364 Lâlâ Shâhîn seemed to be active in the direction of Zagora (Berrhoea) and Filibe [q.v.] (different dates in the chronicles: 762/1362, 765/1364, 766/1365), but the Byzantine-Bulgarian clash in 765/1364 is thought to be connected with an Ottoman-Bulgarian agreement. In 766/1365 Çzar Ivan Alexander divided his realm between his two sons: Stratsimir got the Vidin region and Shishman the Czardom of Trnovo. Dobrotîc in the Dobrudja and Varna were actually independent [see dobroudja]. The same year Hungary seized Vidin, threatened Trnovo, and Amadeo of Savoy not only occupied Ottoman Gallipoli but also Mesembria, Sopolis and Anchialus for Byzantium in 767/1366. With Ottoman auxiliary forces Shishman tried to recover Vidin (769/1368), and gave his sister Thamar in marriage to Murâd I. According to the Ottoman chronicles (see Sa'd al-Dîn, j, 84-87) the Ottomans reached the main Balkan passes by taking Kılıklâğaç-yenidje, Yânîbol (Iambol), Karîn-ovâl (Karnobat), Aydos (Aitos), Sö zbellow (Sopolis) under Timûrtaşî in about 770/1368. İhtiman and Samakov under Lâlâ Şahîn in 772/1370 and 773/1371. Filibe on the one side and the Yânîbol-Karîn-ovâl region on the other were then the main ügls [q.v.] where the ākânlîs, Yûrîks [q.v.] and Tatars were settled in large numbers. Nîgh was taken by the Ottomans only in 787/1385 (Nehri, Taeschner ed. i, 58). Sofia was still in Shishman's hands in 780/1387 (C. Jireček, Gesch. der Bulgaren, Prague 1876, 339). It seemed to surrender between this date and 787/1385. In 789/1387 when Murâd I found that his vassals Shishman in Bulgaria and Ivanko in Dobrudja were not on his side against the Serbians he hastily sent an army under ʿAli Pasha to
secure his rear. Our information on this expedition comes from Neshrl and Ruhl who both used here a detailed and well informed source, and there is no need to change its chronology (cf. F. Babinger, Beiträge zur Frühgesch. der Türkenherrschaft in Rumelien, Munich 1944, 29-35). In the winter of 790-1/1388-9 ‘Ali Pasha took Provadia (Pravadi), Venčan, Madera and Shunnul (Shumen) and passed the winter in the latter. In the spring of 791/1389 he sent Yakhsul Beg against ‘the son of Dobrudja’ in Varna, then went to meet the Sultan in Vânboll. Shishman came there, too, and made his submission to Murad I. But on his return he did not surrender Silistre (Silistria) to the Ottomans as he promised. Upon this ‘Ali appeared before Timnova (Trnovo), Shishman’s capital; ‘the infidels brought him the keys of the city’ which meant submission. Accepting the submission of several other towns on his way ‘Ali came and laid siege to Nikeboll (Nikopol, Nicopolia) where Shishman had taken refuge. He asked a pardon which was granted. ‘Ali was to join Murâd’s army.

After the battle of Kossovo Bâyazid was detained in Anatolia while Mircea, supported by Sigismund, took Silistria and the Dobrudja and made a successful raid on the akla of Karh-ovaš, in 793/1391. Only in 795/1393 was Bâyazid able to come and take Trnovo by force (6 Ramadan/17 July) and he also subjugated the Dobrudja and Silistria. But still Shishman was left in his stronghold, Nikeboll, as a vassal. He then appealed to Sigismund; this caused Bayâzid’s invasion of Transylvania and the battle of Argeš against Mircea (26 Rađajab/17 May, 1395). We find in a newly discovered document (Topkapâ Sarayî Archives, Istanbul, no. 6374) the following ‘Crossing Arapesh river Yildirim Khan came before the fortress of Nikeboll the ruler of which was a lord named Shishman. He was paying tribute to the Sultan in the same way as the Vojvode of Wallachia. The Sultan asked him to send ships, which he furnished. As soon as the Sultan was on the other side he fetched Shishman, beheaded him, and seized Nikeboll and transformed it into an Ottoman sanâbîf.‘ The Slavic sources (see J. Bogdan, Archív J. slav. Philo., xiii, 496) dated Shishman’s death as 12 Sha‘bân 797/23 June 1395 which fits in with the Ottoman evidence.

The battle of Nikeboll (24 Dhu ‘l-Hijdžja 798/28 September 1396) sealed the fate of Bulgaria. After his victory Bâyazid invaded Stratimir’s Vidin too. He settled in Vidin, Silistre and Nikeboll the powerful aqîl of Vânboll against Hungary and Wallachia. In 847/1443, when a Hungarian army advanced into Bulgaria, the Bulgarian re’dîd and voynuks in the region of Sofia and Radomir joined the invaders, who appointed a ‘Vladika’ in Sofia for them. They were soon repressed by the Ottomans (see Inalcık, Faith Devri, Ankara 1954, 20).

During this period, and especially after 805/1402, Bulgaria became stronglyottomanised. In Eastern Bulgaria the Muslim population was definitely in the majority as the surveys of 1520 show (see O. L. Barkan, Akitat Fâhîleste Mecmuası, vol. xi, map). In 859/1455 in Filibe there were four thousand Muslim households as against 50 non-Muslim. Bulgaria was divided into the sanâbîs of Çirmen, Sofya, Silistre, Nikeboll and Vidin in the eyalet of Rûmeli [q.v.]. In the 11/17th century the sanâbîs of Nikeboll and Silistre were included in the eyalet of Özi which was created against the Cossacks. Its capital was Özi and Silistre. The sanâbîs of Silistre included Pravadi, Vânboll, Harsova, Varna, Aghyboll (Anchialus), Aydos, Karh-ovaš and Rûsl-quaš (Rhoukoskastro) in 924/1518. Bulgaria was put under typical Ottoman administration with the re’dîd [q.v.] system (see the laws and regulations in O. L. Barkan, Kâmûl-i Devrîd, Istanbul 1943, 255-285). Most of the members of the pre-Ottoman military class were integrated in the Ottoman military organisation (see my Faith Devri, 136-138, promiçars as imârî-holders, woiniks as Ottoman voynuks [q.v.]. As to the bulk of the Bulgarian population, they were given the status of gümni re’dîd [q.v.]. But among them many groups enjoyed financially a special status as derbandddjîs (guardians at the mountain passes; Silistria) or suppliers of rice, meat etc. for the palace or army (see ʿawārîd), and the Dewżiîme [q.v.] was also extensively applied in Bulgaria.

As Istanbul and the army were dependent for a great proportion of their food supply on Bulgaria the government put restrictions on the export of the Bulgarian meat. In 973/1565 the appointed sheep owners in western Bulgaria were ordered to provide 174,200 sheep for the construction of the warships at Akhyoli in 979/1571 (A. Refik, Türk İdersinde Bulgaristan, Istanbul 1933, document no. 3). The rice production in the upper Marişa (Merici) valley brought to the state as muhâçîna [q.v.] a yearly revenue of about one million akâ (20 thousand gold ducats) in about 888/1483 (T. Gökbilgin, Edirne ve Paşa Livası, Istanbul 1952, 131). Timber from Shunnul, Hezargrad, Timnova (Trnovo) and iron from Samakov were supplied for the construction of the warships at Akhyoli in 979/1571 (A. Refik, doc. 19, 22). An industry of cloth and felt developed in Filibe, Shunnul and Islîmîye (Sliven) in this period which was exported in other parts of the empire (A. Refik, doc. 18). Bulgaria experienced neither an enemy invasion nor an insurrection from 1450 to 1595. The Bulgarian towns, especially Filibe, Sofya and Silistre, developed as military and commercial centres on the main routes in Rûmeli [q.v.]. In these cities new Muslim districts sprang up around Diâmî’s, ʿimârîs, bedestâns and bazaars with rich muhsîs (see Ewliya Celebî’s detailed description in 1061/1651, vol. III, 301-421, and H. J. Kissling, Beiträge zur Kenntnis Thrakiens im 17. Jahr., Wiesbaden 1956). According to the Ottoman census in 1520 (see O. L. Barkan, JESHO, vol. I, Part 1, 1957, 32) the sanâbîs of Silistre, Çirmen, Nikeboll, Vidin and Sofya had about 125 thousand households altogether excluding the population in the places belonging to Paşhâ in Bulgaria.

From the end of the 16th century onwards the rate of several taxes was raised and the complaints of the Bulgarian re’dîd from the exactions of the local officials and soldiers began (A. Refik, doc. 37, 38, 41, 42, 46, 47). In 1014/1605 the re’dîd of the Sofya region complained that the agents of the Patriarch were trying to raise the rate of duties from 6 akâ to 12 for the re’dîd and from 60 to 400 for the local priests (A. Refik, doc. 38). The first important uprising in Bulgaria took place at Velikof-Trnovo in 1003/1595 when Michael, Wallachian Prince, made successful raids in Bulgaria. Sinân Paşhâ [q.v.] put down the insurrection and thousands of Bulgarians took refuge in Wallachia. Also from this time on the Bulgarian kayâdkâs or ephîbîyâs begin to be mentioned more frequently in the Ottoman sources (A. Refik, doc. 52, 54, 75). Now almost with every enemy invasion the re’dîd were joining them and when they withdrew large groups of re’dîd followed them in spite of the assurances on the part of the Ottoman government (for example in 1109/1698 the re’dîd of the region of...
Bulgaria — Bulghar

In 1150/1737 the reýd of the region of Íznil (Znepolje) (A. Refik, doc. 59) in 1208/1793 those of the region of Ismail and Stanišnaka). In 1304/1899, seventy or eighty thousand Bulgarians followed the Russian army to settle in Bessarabia; in 1861 ten thousand of them left their home for the Crimea.

In the second half of the 18th century the aýán were particularly powerful in Bulgaria. As mutalasims [q.v.] and hereditary possessors of the large state lands, eýilik [q.e.], they became real masters of the country since the government had to rely on them to collect the taxes of the reýd and most powerful of them such as Trestenik-oglu Ismáíl, Bayrakdar Mustafá [q.v.] in Rusdük, Ḵadjí Umar in Herzograd even maintained private armies to which the Sultan had to have recourse at critical moments (A. Refik, doc. 90). The Rhodopes and the Balkan mountains sheltered an increasing number of bands called Kızyl in this period. Profiting from this anarchy a soldier of fortune, Pazwand-oghlu or Pasban-oghlu ʿOṯmân [q.v.] rebelled, and then, as the Pasha of Vidin, ruled over Western Bulgaria between 1212/1797-1212/1807 (Diewadt, Taʻrīḫ, vii, 237, 240, 250, viii, 146-48). Under Mḥmød II [q.v.] the aýán were eliminated and the central authority was established in Bulgaria. In the period of the Taʻṣṣifiat in 1263/1846 Bulgaria was reorganised as the eydilat of Silistre, Vidin, Nísh with the provincial councils in which the Bulgarian representatives were admitted. But the administrative reforms did not prevent unrest among the Bulgarians. An insurrection in the Nísh region in 1257/1841 and a more violent one in the Vidin region in 1266/1850 broke out partly because of the provocation of the revolutionists in Serbia and Wallachia, and partly because of the abuses of the eýilik system maintained there by the Muslim aḡás or gospodars (see my Taʻṣṣifiat ve Bulgar Melesi). Ankara 1943.

Many observers in the middle of the 19th century (N. V. Michoff, La population de la Turquie et de la Bulgarie, 3 vols. Sofia 1915-1929) came to the conclusion that one third of the population of Bulgaria was Muslim. Out of this about 400 or 500,000 were the Fomak (Pomatsi), the native Bulgarians who had adopted Islam in the 16th and 17th centuries, in the central and western parts of Bulgaria, and the Rhodopes. Muslims were in the majority in the cities of Filibe Vidin, Shumn, Rusdük, Razgrad, Varna, Plevne, Osman-bazar, Eski-druma, Yeni-zaghrá and in the minority in those of Gabrovo, Nísh, Sofya, Tírnova, Karnobat (Karín-ovasi) by 1293/1876. After the Crimean war the Bulgarian government had settled in Bulgaria 70 or 90,000 ĉerkés and about 100,000 Tatars (in A. H. Miḥdāt, Miḥdāt Pağa, Cairo 1322/1904, 35: 350,000 immigrants). Tension between these and the native Bulgarians was exploited by the Bulgarian revolutionists who had finally organised a Central Committee of Revolution in Bucharest in 1868/1869. In 1281/1864 the new administrative reform was for the first time applied in Bulgaria. The sandjak of Rusdük, Varan, Vidin, Tülçi (Tülka), Tírnova (Trnovo) formed the wilyat of Tuna and those of Sofya and Nísh that of Sofya. Miḥdāt Pağa [q.v.], first governor of the wilyat of Tuna, made it the most progressive province of the empire (A. H. Miḥdāt, 24-56). Although the tax revenue of the wilyat increased fifty per cent under his administration, the peasantry had to pay more and do forced labour for the construction of the new routes. In 1285/1870 the struggle for an independent Bulgarian church resulted in the establishment of the Exarchate which was regarded as a national victory. In the same period the increased activities of the Bulgarian revolutionists, ļomlāğdāğ, supported actively by the Russians, resulted in the great insurrection of 1293/1876 (April-May). Bulgaria became the main field of operations of the Ottoman-Russian war of 1293/1877. It caused an exodus of the Muslim population to the south. With the Treaty of San-Stefano Russia attempted to create under her protection a great Bulgaria from the Danube to the Aegean Sea. But the great powers replaced it by the Treaty of Berlin which created a principality of Bulghıristan Emârâtı, under the Sultan’s suzerainty, and the autonomous Province of Eastern Rumelia (Rûmeî-i Şarkî Vilâyeti). It united with the Principality as a result of a revolution in Filibe in 7 Dhu l-Ḫidijâ 1302/18 September 1885 (A. F. Türkgeldi, Mesal-i Miḥimmit-i Siyâsîyye, Ankara 1957, 193-246). At the time of the revolution of 1326/1908 in Istanbul Prince Ferdinand declared the independence of Bulgaria and assumed the title of Czar (7 Ramadân 1326/3 October 1908).

(H. Inalcić)

Bulghár, in Islamic literature the name of a Turkic people by whom two states, one on the Volga, the other on the Danube, were founded in the early middle ages.

Early history: The original Bulghars seem to have arrived in the south Russian steppes with one of the Hunnic waves. They are mentioned for the first time by Joannes Antioch. (Miiller, Frgm. Hist. Graec. iv, 619) in the year 481 A.D., when they helped the Emperor Zeno in his fight against the Goths. The centre of the Bulghár country was then the steppes in the vicinity of the Kuban river and the Maeotis (Azov Sea), but some of their hordes dwelled also in the region of lower Danube and in the Caucasus. In the Byzantine chronicles
their original country, Kuban, is known as Great Bulgaria (Theophanes, Nicephorus). After the death of Khán Kuvrat in 642 A.D. the unity of these Bulghars was brought to an end under the pressure of the growing power of the new Khazar kingdom. One section of the Bulghars remained in their ancient settlements on the Kuban and in the Maeotis till the 10th century. At this time this country was called by Constantine Porphyry. (De adm. imp., 12, 42) “Black Bulgaria” and the Russian chronicles give them also the name of “Black Bulgars”. This section of the Bulghars did not play any great part in history and was probably absorbed by the successive waves of Magyars, Pechenegs and Kumans. By far the greatest group of Bulghars, under Khán Ispërukh, left their home country in 678 for the Balkans and the Danube, where they founded a state among the South Slavonic tribes. In a comparatively short time the numerically weak group of Turkic Bulghars was assimilated and absorbed by the more numerous Slavs. In Islamic sources this state and its inhabitants are known as Burdjan.

The third and smallest group had retreated along the Volga to the north (this fact is now confirmed by archaeological data) and settled down by the confluence of the rivers Kama and Volga. There they subjugated the Finnish aboriginal population and founded a new state. This group are the Bulghar of Armenian, Bulkär of Persian sources, and this name is applied also to the country and to the capital of their state.

Sources: Our outstanding authority on the Bulghar is Ibn Faḍlān, who in 309-10/921-22 took part in an embassy sent by the Caliph al-Muqtadīr billāh to the Bulghar king. A little earlier is the source preserved in Ibn Rusta, Ḥālid al-ʿĀlam, Gardīzī, al-Bakrī and Marwāzī. Some decades younger than Ibn Faḍlān are the accounts of al-ʿIstāḥqārī, al-Maṣʿūdī and al-Mukaddasī, and from the second half of the 4th/10th century we have the report of Ibn Ḥawkāl. Beside these main sources we find some few remarks in other Arabic and/or Persian works, such as those of al-Burānī, Bayḥakī, Ibn al-Nadīm etc. In the 6th/12th century Bulghar was visited by Abū Ḥamīd al-Andalūsī and two centuries later by Ibn Baṭṭūṭa; but the report of the latter is not free from the suspicion of invention. The historians of the Mongol epoch, such as Ibn al-ʿAṯīr, Abū ʿl-ʿFidaʾ, Ṣaqrī, al-Dīn, Diwānī and others, inform us about the end of Bulghar state. European sources are represented only by the Russian chronicles, which are valuable for the time before the Mongol invasion and after. As our sources come chiefly from the 4th/10th century, the following picture of the internal state of affairs in Bulghar is drawn mainly from these and applies to later times only indirectly.

 Territory and population: The centre of the Bulghar kingdom was formed by the triangle between the Volga and the Kama and the country south of the confluence of both these rivers. As to the frontiers of the Bulghar territory, our sources leave us entirely in the dark, and chapter 52 in the Ḥālid al-ʿĀlam (erroneously captioned Būrṭās) is totally useless in determining its neighbours. Nevertheless, we can gather some indications about these neighbours and their relation to the Bulghar kingdom.

To the north lived various Finno-Ugrian tribes, as Wēu (in Russian sources Vēs, today Veps) and Yūra (Russ. Yugra); both of them at different times were under Bulghar domination, at least nominally. In the east, the Baṣdīr (Baškīrs) were subject tot he Bulghars, and to the south-east some Pecheneg and Qāzū tribes led their nomadic life quite independently of the Bulghars. Between the Bulghars and the Khazars, in the forests, dwelled the more primitive Būrṭās/Būrdās, probably ancestors of the Mordva; they were subject to the Khazars and the object of frequent raids by the Bulghars and in later times also incorporated in the state of the latter. According to al-ʿĪṣṭāḥqārī it was 15 days' journey from the land of the Khazars to the land of the Būrṭās and thence another 15 days' to the limits of this people, probably to the north-west.

To the west lived various Slavonic (Russian) tribes, but the limits of their eastern colonisation are uncertain. That some of these were in the 10th century subject to the Bulghars is evident from the fact that the Bulghar ruler is frequently called by Ibn Faḍlān melk al-ʿĀlamī (king of the Slavs).

The Bulghars were divided into many hordes and groups, known under different names to Islamic authors. Barsūlī, Iṣṭīkūl (or Askīl) and Bulkār are the three main groups named in Ibn Rusta and his epigons and Ibn Faḍlān mentions, apart from Askīl, the tribe of Suwār and a group or a large clan, called al-ʿBarāndārūl, who were already Muslims and had a wooden mosque. In the forests dwelled the subjugated Finnish tribes and in the towns (at a later period) a mixed population formed by merchants and craftsmen from Russia, Khazaria, Central Asia and even from Baghdad.

Political institutions: The Bulghar ruler bore the title ylīlwawar (in Ibn Faḍlān ylīlwaw) a Turkic title known also in the form ilteber from the Orkhon inscriptions. This title indicates the status of a lesser prince, vassal of a khābān, in this instance of the Khazar khābān, and shows also that the Bulghar country originally formed only part of a greater empire and that their ruler was not entirely independent. The Bulghars paid to the Khazars a sable for from each house as a tax, and their dependent status was manifested also by the fact that a son of the Bulghar king lived at the court of the Khazar khābān as a hostage. These feudal relations were probably loosened by the Bulghar alliance with the caliph in Baghdad, but it seems that only the fall of the Khazar empire in 965 allowed them to become an absolutely independent state. The Change of the position of the Bulghar ruler after the alliance with the Caliphate is expressed also in the change of the old title ylīlwawar to the new one amir as a symbol of the cessation of the former allegiance to the Khazar khābān.

The state of Bulghar did not form a political unity, since the tribal leaders (Ibn Faḍlān calls them mulāk) did enjoy a large independence and freedom; this is apparent from Ibn Faḍlān's report of the refusal of the mulāk of the tribe Askīl to obey an order of the king. Although the Russian chronicles mention continuously only one Bulghar state, we read sub anno 1183 of a war waged by one Bulghar prince, allied with the Romans, against the Great Town of Bulgaria and in the Mongol epoch that another 'state, that of Zhukotin (Djuke-Tau), was founded.

In Ibn Faḍlān's time the relation of the ruler to his people was still quite patriarchal. He used to ride through the capital (a town of tents) alone, unaccompanied by a bodyguard or escort; at the sight of their ruler his subjects rose from their seats and bared their heads. The ruling class was formed, besides the family of king and the tribal leaders, of 500 important families.

Economy and trade: Until the first half of
the 10th century the Bulghars led a nomadic life, like other Turkic peoples in the Russian steppes, and cattle-breeding was their chief occupation and the foundation of their economy. This is clearly shown in the earlier sources, for according to Ibn Rusta the taxes were paid in horses. Ibn Faḍlān already found the society in a state of change from nomadism to settled life. Many customs of the former way of life were then still surviving, i.e., no permanent capital served as the seat of the ruler, who wandered from one place to another and lived in a large tent. Al-Iṣṭakhrī mentions that the inhabitants spent the winter in wooden houses and the summer in tents. In the latter part of this same century Bulghār was already a flourishing agricultural and trading centre.

The chief products were millet, wheat and barley (Ibn Rusta, Ibn Faḍlān) and these formed also the main food together with horse-meat. From the produce of their fields the people paid no sort of taxes to the king. According to archaeological finds agriculture played a leading role, and for export. At a later period Bulghār leather (the modern Russian leather yuft?) and the Bulghār shoes (Pers. maʿāz-i bulghārī) were particularly well-known, especially in the East. Archaeology has brought to light many other industrial products such as copper-ware, ceramics, jewels and implements of a comparatively high degree.

The main source of the country's wealth was, however, international trade. The river Volga is one of the most ancient trade-routes in the world and the favourable site of the town of Bulghār at the cross-roads of east-west and north-south trade was fully exploited. The Bulghārs themselves traded mainly in the north and in a lesser degree also in Central Asia, but the importance of Bulghār was due in the first place to its function as a meeting-place of foreign merchants, Russians, Chagars, and Muslims. The king levied a duty of 10% on all water-foreign merchants, Russians, Khazars, and Muslims. This was made by dumb barter (see Ibn Fadlan, Birunī, Al-Mukaddasī, 325, gives a long list of Bulghār exports: furs of many different kinds, horse and goat skins, shoes, kalansuwa, arrows, swords, armour, sheep, cattle, falcons, isinglass, fish-teeth, birch wood, walnuts, wax, honey and Slavonic slaves. Many of these items are mentioned also by other sources and as Ibn Rusta, al-Iṣṭakhrī, Abū Ḥāmid etc.

From Islamic countries the chief imports were textiles, arms, luxury goods and ceramics. There was also silver money current which had been imported from Muslim countries, this money being used to buy the goods of the Russians and Slavs. From the beginning of the 10th century the chief dinars there were in Bulghār imitations of Sāmānī dirhams, with the name of the original mint and original date, but with the name of the Bulghār amīr Miḥrāb b. Ḫaṣib (probably the son and successor of Qaṭīfā r. ʿAbd Allāh, the ruler in Ibn Faḍlān's time). From 337/948-49 we have the first dirham from a Bulghār mint (Suwar), struck in the name of Thiʿb b. Abū Ḥāmid, and further coins till the year 357/ 968. Other coins bear the names of Muḥammad b. Abū Ḥāmid (366/976-77), struck in Suwar and Bulghār, and of Muḥammad b. al-Ḥasan (between 366/976-77 and 370/980), struck in the same mints (see Vasmer, Wiener Num. Ztschr. 57, 1924, 63 f.). Besides the names of the rulers there also appear on the coins the names of ʿAbbāsid caliphs.

At the time of his visit Ibn Faḍlān did not notice any towns or villages, as the Bulghārs was a nomadic life. It seems that the building of the fortress, which was one of the principal tasks of the Baghdaḍi embassy, laid the foundation of the future town of Bulghār. The non-existence of towns in Bulghār prior to the embassy is confirmed on the one hand by the silence of the Ibn Rusta group of sources about these, and on the other hand by the use of the name Bulghār: this name signifies to Ibn Rusta and Ibn Faḍlān always the country or the people, never the town. Al-Iṣṭakhrī is the first author who mentions the existence of the towns Bulghār and Suwar, with wooden buildings and mosques and 10,000 inhabitants. This account is then repeated by all subsequent authors with some small additions (Hudūd al-ʿAlam: 20,000 inhabitants; Gardizi: 500,000 families). The Russian chronicles know a number of Bulghār towns, but owing to their lack of details it is impossible to ascertain their locations. The most important of these towns was Velikiy gorod Bolgary (the Great town of Bolgary), which is mentioned many times in the chronicles.

During the past half-century the Russians have undertaken numerous archaeological excavations on the sites of the ancient towns in Bulghār territory. The ruins near the village of Bulgarskoie, a distance of 6 km. from the Volga, show a high culture in the 13th and 14th centuries. All the buildings such as palaces, mosques, baths as well as the walls were of stone; the town had a circumference of about 6 miles and was surrounded by suburbs to the north and west. It must have had a population of some 50,000 souls at this time. The more recent discoveries in Bilyar and Suwar are richer than those in Bulgarskoie and it seems that Bulghār (i.e., the ruins at Bulgarskoie) was the capital only in the 10th and 11th centuries and then in later times its rôle was transferred to Bilyar in the central part of the country, on the river Cheremshān. Which of these two was the "Great town of Bolgary" of the Russian chronicles is difficult to tell.

Religion: According to our oldest sources (Ibn Rusta, ca. 300/912, but with an older account) Islam was well established amidst the Bulghārs and there were some wooden mosques on their territory. This is fully confirmed by Ibn Faḍlān, who during his visit found many Muslims, mosques, and a khaṭīb and muʿāḍāhān. The early Arabic sources are silent about the beginning of islamisation in Bulghār and only the 12th century traveller Abū Ḥāmid relates a legendary account, connected with a popular etymology of the name Bulghār; this
legend, however, is not known to the later Tatar traditions. One of the purposes of the Baghdad law, the building of a mosque and a minbar in the islamisation of the whole city. It seems that this task was successfully accomplished. It was from Central Asia that Islam first reached Bulghar; the manner in which the adhan was performed clearly followed the madhhab of Abu Hanifa, then ruling amongst the Central Asian Turks. Because Ibn Fadlan followed the Shafi'i madhhab, a dispute arose between him and the Bulghar mu'adhdhin, backed by the king. The Bulghars remained true to their Hanafi madhhab throughout the whole of their history. In towns there were mosques and Friday mosques, and the Hudud al-'Alam confirms that the inhabitants of Bulghar and Suvwar were zealous fighters for the faith. According to Mas'udi (Murugj, ii, 16) a son of the Bulghar king had made the pilgrimage to Mecca during the reign of al-Muqtadir; another proof of the religious zeal of their rulers was the presentation to Sabzawar and Khusrawjud, of a gift in 415/1024 by the Bulghar amir Abu Ishak b. Ibrahîm b. Muhammad b. B.I.t.wâr (see Ta'rikh-i Bayâk, ed. Tehran, 63). It seems that the Bulghars exercised a decisive influence on the conversion of nomadic Turkic tribes, such as Pechenegs and Kumans, to Islam, and they also nurtured hopes of spreading the Muslim faith in Russia, in the 10th century still pagan. In the year 986 an embassy was sent to Kiev in order to convert prince Vladimir to Islam and some time later this same ruler, searching for a suitable religion for himself and his people, invited Bulghar Muslims to explain to him the principles of their faith and to take part in a religious disputation between the representatives of the chief religions.

This northernmost Islamic country posed some ritual problems, owing to the short days and long nights during the winter and vice versa during the summer. To perform the daily five prayers in a short day was not an easy task and it was impossible to hold to the prescribed times; similar problems arose in Ramadân. The peculiarity of this is found in other Islamic lands, soon attracted the attention of Muslim writers and led to lengthy discussions as to what should be the right solution of these problems. As late as 1860 the Kazan historian Mardjam wrote a treatise concerning this problem (see Togan, Ibn Fadlan, 170, where there are further references).

Language and literature: The language of the Bulghars, like that of the Khazars, has left very few remnants, mainly in toponymy and onomastics, and, beginning with the 12th century, also a fair number of epitaphs. The linguistic affinity of their language remained a problem a long time. Al-Istakhri, 225, tells us that the language of the Bulghars resembled the speech of the Khazars, but both are unlike the languages of Burtas and Ris. (An analysis of Kashghari's account of the Bulghar language together with a discussion of the whole problem is to be found in Fritsak, in ZDMG 109, 1959, 92-116). It is however, now established that the Bulghar language belongs to the so-called "Bolgarian" group of the Western (or West-Hunnic) branch of Turkic languages, the other groups being Ghuzz, Kipchak and Karluks. The "Bolgarian" group consists, apart from the Khazarian, of the following languages: 1) Proto-Bulgarian—the language of the Proto-Bulgarian inscriptions and of the so-called "List of Princes" of the Bulgars of the Danube, found in an ancient Russian chronicle (see O. Pritsak, Die bulgarische Fürstenliste, Wiesbaden 1955); 2) Kuban-Bulgarian; remnants of this language are found in loan-words in Hungarian, and 3) Volga-Bulgarian, the language of the epitaphs, written in Arabic script, found on the territory of Bulghar. The degree of affinity between this language and that of the modern Cuvâsh has not yet been satisfactorily investigated and explained. As the Cuvâsh have been very little affected by the highly developed Muslim culture of the Bulghars, it is improbable that they are descendants from these; a greater right to claim such descent belongs to the modern Kazan Tatars.

With the sole exception of the above mentioned tomb-inscriptions, dating from the 12th until the 14th centuries, we do not possess any remnants of literary activity of the Bulghars. Ibn al-Nadîm mentions in his Fihrist that the Bulghars, prior to their islamisation, used the script of the Chinese and of the Manichaeans, but no sample of this writing has come down to us. Abu Hamîd reports a Ta'rikh Bulghar, a work of Kâddî Ya'qûb b. Nu'mân al-Bulghârî from the beginning of 12th century; in the year 989/1581 Sharaf al-Dîn Husâm al-Dîn al-Bulghârî composed in the Tatar language a Risâla-Tawârikh-i Bulghar-ryysa, which contains nothing but fabulous stories about the propagation of Islam and the lives of saints; it was printed in Kazan in the year 1902.

History: The scarcity of our sources does not permit us to follow the course of Bulghar history closely. The Bulghars came into the light of written history only at the time of Ibn Fadlan's visit; at this period their ruler was yllawar Almush b. Shila, who subsequently changed his title and name into amir Diyarfar b. 'Abd Allah. The coins supply the name of his son and successor Mikall b. Diyarfar and also the names of another three rulers: Talib b. Ahammad, Mu'min b. Ahammad and Mu'min b. al-Hasan (for the dates see above, section on economy). The Bulghars remained till the fall of the Khazar khâkânate a vassal state of the latter. In the year 964 the country in the Volga basin was devastated by the Kievan prince Svyatoslav; an echo of this is found in Ibn Hawkal's story of the conquest of Bulghar, Burtas and Kazar in the year 358/968-69. This is, however, not the date of the Russian expedition but that of the year in which Ibn Hawkal received the information of these events. This invasion had no lasting effects on the prosperity of Bulghar; similarly the second Russian campaign, led by Vladimir, the son of Svyatoslav, in the year 985 did little damage. On the contrary, the Bulghar gained by the downfall of Khazar khâkânate; as the Russian armies after their victory retreated, the place of the mighty Khazars was occupied by the Pecheneg nomads, representing no real danger to the Bulghars. For a short period the relations between the Russians and Bulghar improved, as is shown by the trade treaty concluded in the year 1066 on equal terms. Yet both these states were in the same way interested in the fur trade in the north and this led to continuous fighting since the second half of the 11th century; Bulghar history is from this time a history of their wars with the Russians.

In 1088 the Russian town of Murom was captured by the Bulghars, but remained in their hands only for a short time. After this event they were on the defensive and on many occasions—in the years 1120, 1164, 1172, 1183, 1220—the town of Bulghar was
besieged by the Russians. Only two instances of a Bulghar offensive are mentioned: in 1107 they
sacked the town of Suzdal' and in 1218 they unsuccessfully attacked the town of Ust'yug, situated far
in the north. The further fighting with the Russians was interrupted for nearly two centuries by the
Mongol invasion.

Abū Hāmid, who visited the town of Bulghar and the Volga basin in the first half of the 12th century,
says nothing about political history except the statement, that in the town of Saḵšin on the lower
Volga there lived a Bulghar āmīr and stood a Bulghar mosque.

When the Mongols were returning to the east after the victory over the Russians on the river
Kalka (1224) they were ambushed by the Bulghars and suffered heavy losses (Ibn al-Athlr, xii, 254).
This was avenged in a most sanguinary fashion; in 1229 the Bulghar vanguard on the river Yayik
(Ural) was put to flight, and, in 1236 according to Muslim sources, in 1237 according to Russian
chronicles, the Mongols attacked the Bulghar state and destroyed the capital with all its inhabitants.

From then on the country of Bulghar formed part of the kingdom of the "Golden Horde", the
Mongol empire in the Eastern Europe [see BATU'IDS]. The capital Bulghar appears to have risen to a
flourishing condition in a relatively short time again; the archaeological finds show a high culture dating
just from this period, and the majority of the epitaphs is dated in the Mongol epoch. The subsequent
history of the country and the capital is very little known and we are not even told why and when
the town was abandoned by its inhabitants. It was not affected by Tūnūr's campaign of the year 1395,
but Bulghar was soon afterwards, in 1399, destroyed by the Russians. The town probably suffered more
from the rise of Kazan (called also Noviy Bulgar, New Bulghar), which was founded just before this
time by Batu-Khan, than from these wars. The selection of this town as capital of an independent
Tatar state, founded by Ulugh Muhammad (died 1446), sealed the fate of the town of Bulghar. Its
importance as the greatest market on the central Volga passed first to Kazan and then to the Russian
town of Nižnij-Novgorod (today Gorkiy).

The word Bulghar still remained in use in literature, though only as the name of a country, and as late
as the 19th century the Tatars called themselves Bulghars.

AL-BULKÎNĪ family of Egyptian scholars of Palestinian origin, whose ancestor Sālih settled at
Bulqina in al-Gharibiyya.

(1) ‘Umar b. Raslān b. Naṣīr b. Šālih, Sīrat-Dīn Abu Ḫāṣa al-Kinānī, born 12 Shawwāl 724/4 August 1324, died 10 Dhu ‘l-Ka‘a’d 805/1 June 1403. He studied at Cairo under the most famous scholars of the day, including Ibn ʿAḍlī (q.v.), whose daughter he married, and served as mufti during Ibn ʿAḍlī’s brief tenure as Grand Kādī in 759/1358. Appointed mufti in the Dar al-ʿAdl in 765/1363, he became the most celebrated jurist of his age (cf. Ibn Khaldūn, Muḥaddith, ch. 6, § 7 [Quatrempère iii, 8]), but except for a short term as Slāhiyye Grand Kādī at Damascus in 769/1367-8 (made notable by rivalry with his teacher Tāj al-Dīn al-Sabkī) he was never promoted Grand Kādī, but only to the lesser (though lucrative) office of Grand Kādī ʿl-ʾAskar, in addition to a number of teaching posts. In later life, however, he was honoured with the title of Shaykh al-Islām, ranked along with or above the Grand Kādīs, and regarded by some as the "Mudjaddid of the eighth century". With his stupendous knowledge he was seldom able to finish any literary work, and besides a treatise on Maḥānām al-Šīrī as-Fīhil, he left only an
uncompleted work, al-Ṭadrīb, on Slāhīyye fīhil. He was the founder of the family’s madrasa in Hārat Bahā’ al-Dīn Karīkābī.

Bibliography: Sakāwī, Daw’ Lāmī, v, 85-90, 182; Ibn Ṭabaribardī, Nuḍūm (Popper) v (= Cairo xii), index; vi, 136; Manhal Šāfi‘ī, index by Wiet, no. 1723 (with family table and additional bibliography); Ibn Ḥadijār, Durar Kāmina, ii, 267, 427; Suyūṭī, Ḥums al-Muhādara, i, 148 (135); Brockelmann II 93, S II 110; Ibn Ḥadijār, Inbā‘ al-ʿQūnī (BM. MS. Add. 7321), 1434 A.H., b.

(2) Muḥammad b. ʿUmar, Badr al-Dīn, 759/1358-799/1398, eldest son of (1), succeeded him as
Kādī ʿl-ʾAskar and muftī Dār al-ʿAdl in 779/1377.

Bibliography: Ibn Ḥadijār, Durar Kāmina, iv, 105; Wiet no. 2288. His son, Tāj al-Dīn Muḥammad: Daw’, x, 172; Wiet no. 2350; and grandson, Wali al-Dīn Ahmad, kādī of Damascus: Nuḍūm, vii, 545; Daw’, ii, 188; Suyūṭī, Nazm al-Dīyān (Hittil), 90.

(3) Abū al-Raḥmān b. ʿUmar, Djalāl al-Dīn, 765/1362-824/1421, succeeded his brother Muḥammad as Kādī ʿl-ʾAskar in 793/1389. He lived in luxurious style, had a retinue of 300 mamlūks, and in 804/1401 obtained the office of Slāhīyye Grand Kādī, which he held with intervals until his death.

Bibliography: Sakāwī, Daw’, iv, 106-114; Ibn Ṭabaribardī, Nuḍūm vi, 548-9 and index; Wiet no. 1361; Kākāshandī, Subh, ix, 180, for his extant works on Kurān and nihā, Brockelmann II, 112; S II, 139. Or. 5311, 1058, Add. 23,330, 1064, 6, Add. 7321, 258a, b.

(4) Sālih b. ʿUmar, ʿAlam al-Dīn Abu’l-Bakr, 792/1389-868/1464, youngest son of (1), eight times
Slāhīyye Grand Kādī of Cairo from 1402 until his death, professor in various madrasas, and nāṣīr
of the Baybarsiyya Mənkəb. He was the teacher of al-Sakhawi and of al-Suyuti in fiqh. In addition to editing his father's fatwas and Muḥammad, completing his Tadhrib, and writing his biography, he composed a tasrif and other works on tradition and law.

**Bibliography:** Sakhawi, Daw', iii, 312-4; iv, 40 (biography of his brother Dīyā‘ al-Dīn ʿAbd al-Khālid); Ibn Taghribirdi, Nuṣūm, vii, 792-3 and index; Wiet no. 1197; Suyuti, Ḥasan al-Muhādara, i, 205 (1898); Nasr al-Tihān, 119; Brockelmann, ii, 96; vi, 114-5.

(5) Muḥammad b. (Ṭāhir-Dīn) Muḥammad b. ʿAḏr al-Rāmān, Badr al-Dīn Abū’l-Saʿādat, 81/1917 or 821/1419-848/1898, grandson of (3), served as al-ḏabīb for his uncle Sāliḥ, appointed on his father's death in 855/1451 to succeed him as Kādī ʿl-ʿAskar, obtained for 7000 dinars the office of Shāhītī Grand Kādī in 871/1466, but held it for only four months, and greatly disgraced the family by his extravagances.

**Bibliography:** Sakhawi, Daw', ix, 95-100: Ibn Taghribirdi, Nuṣūm, vii, 742; Ibn Ṭūnus (Kahlé), iii, 211. His brothers: ʿAlī al-Dīn ʿAlī, Daw', v, 310, Shihāb al-Dīn Abūn, Daw', ii, 119; his sons, Daw', iv, 28; vi, 102; vii, 70.

Collateral branches descended from Abū Bakr b. Rasūl and Muḥammad b. Muṣṭafā b. ʿAbd al-Qadir, cousins of (1), held office as kādīs of al-Mahāllah, Alexandria, etc.; see table in Wiet no. 1723 (to be supplemented as above), and Sakhawi, Daw', i, 253; iv, 228, 232; vi, 296; vii, 62.

**BUNDUĶĪYA** [see BAYBA].

**AL-BUNT, Spanish Alpuente, a small municipio in the north-west of the province of Valencia, on the eastern slopes of the mountains forming the valley of the Guadaiatir-Turia; it belongs to the partido judicial of Chelva, 87 kilometres from the chief town. Situated at the junction of two mountains, Monte del Castillo and loma de San Cristobal, its castle stands on a crag sheer on all sides, which could only be reached by the steep and narrow ascent of an artificial covered way defended by a tower of dressed stone. In the ruins one can see traces of Roman and Arab masonry. It was reached by a drawbridge, some 40 metres long, which has perhaps given its name to the place. It has no history before the time when, at the beginning of the fitna which put an end to the Umayyad caliphate, the Banū Kāsim, Kutāma Berbers, bound by a long-standing alliance with the Arab tribe of Fihār, became independent in their small, steep territory, which formed part of the kūra of Santiberia.

Of the four petty kings who ruled it, the first was ʿAbd Allāh b. Kāsim al-Fihr, an ʿAmīrīd masūd, who took the title of bādīb and ruled as an independent sovereign. After the caliph al-Murtadhā was routed before Granada and killed at Cadiz, his brother Abū Bakr Ḥṣaym sought refuge in Alpuente and, having been acclaimed by the Cordobans as caliph at the end of Rabī‘ 11 418/June 1027, lived peacefully in this obscure place for over two and a
half years, welcomed and well-treated by the Amirid mawlid, who was a supporter of the Marwanid dynasty notwithstanding the harm which the last caliphs had done to his predecessors. When he at last decided to make his official entry into Cordova it was with a retinue as small and countryfied as the place from which he came; he was quickly deposed and it was thus that the Umayyad caliphate came to an end.

Abd Allah b. Kaisim, who ruled with the title of Nizam al-Dawla and died in 421/1031, was succeeded by his son Muhammad b. Abd Allah Yamin al-Dawla, who died suddenly in 440/1048, leaving a son six years old. The son was dethroned after a few months by his paternal uncle Abd Allah b. Muhammad, who married the queen mother and lived on good terms with the neighbouring reyes de taifas until his death in 485/1092.

Alpuente next passed into the hands of the Almoravids and then into those of the Almohads. When the Almohads were expelled from Andalusia, the sayyid who was governor of Valencia, Abu Sa'id Zayd, grandson of Abd al-Mu'min, allied himself with James I the Conqueror and offered Alpuente to him; afterwards, when he sought refuge at his court and turned Christian, he submitted Alpuente to the jurisdiction of the bishop of Segorbe, Don Guillel.

There is another Al-Bunt, a farm near Granada, where in 428/1037 Badis, the successor of Habbas, and his brother Buluggin treacherously killed the Amirid fadl Zuhayr, lord of Almeria.

BUR [see Bâl]. AL-BURĀK, the beast on which Muhammad is said to have ridden, when he made his miraculous "night-journey". According to Sūra xxii, 1, the "night-journey" led the Prophet from the sacred place of worship, i.e., Mecca, to the "remote place of worship". This latter place has been identified by B. Schrieke and J. Horovitz with a point in the heavens, and by A. Guillaume, recently, with a locality near Dīfrānā on the border of the sacred precinct of Mecca. The addition of the phrase "the environs of which we have blessed" makes it probable, however, that the passage refers to a place in the Holy Land, namely Jerusalem (cf. Sūra xxi, 71, 81; Sūra vii, 137; Sūra xxxiv, 18; allātā hārašnā fidā). Be this as it may, the "remote place of worship" has always been understood, in the indigenous tradition, as a reference to Jerusalem. It was accepted, moreover, that Muhammad made the journey from Mecca to Jerusalem and back, not merely in a dream, but—accompanied by Gabriel—in the living flesh and within the space of a single night. The miraculous speed of such a feat was held to be explicable on the ground that Muhammad rode a beast of exceptional fleetness. It was in this connexion that the legend of al-Burāk arose.

In one of the numerous hadīths that Tabari, in his Kurān commentary, gives on the "night journey", Muhammad's mount is described simply as a horse (xy, 61). Most hadīths of the earlier times call it, however, al-Burāk and define it as "a beast (in size intermediate) between a mule and an ass", sometimes with the further detail that it is white. It is also declared to be long (Muslim, Imān, 259), with a long back and long ears (Ibn Sa'd, i, 1, 143), with shaking (Tabari, Taṣfîr, xv, 10), saddled and bridled (ibid., 12). The root b'dr is also described as a beast having "wings on its shanks, with which it drives forward its legs". These words are intended to mean, of course, that al-Burāk could move its legs extremely quickly, and not that it was capable of flying. Genuine wings are first ascribed to it only in later texts. It is generally depicted in miniatures as a winged creature (see below). Grammatically al-Burāk is construed both as masculine and as feminine.

It is reported in some hadīth, that al-Burāk at first resisted the attempt of the Prophet to mount him and was therefore brought to obedience by Gabriel. Muhammad, after the arrival in Jerusalem, is said to have dismounted and tied the beast to a rock (ṣabbār Tabari, Taṣfîr, xv, 7), or "to the ring, to which the Prophets were wont to tie it" (Muslim, Imān, 259; Tabari, Taṣfîr, xv, 10; Ibn Sa'd, i, 1, 143 f.). Al-Burāk, in certain hadīths transmitted by Bukhārī and Muslim, serves as the steed for Muhammad's actual "journey to heaven". The legends of the "night-journey" (ṣīrāt) and of the "journey to heaven" (mi'rād) became combined at an early date. Al-Burāk was also included in this confusion of legends and thus developed gradually into a flying steed. The ascent into heaven (mi'rād), in the original form of the legend, occurred however by means of a ladder.

The etymology of the name Burāk is not yet fully elucidated. E. Blochet believed it to come from the Middle Persian bdrag, "steed". J. Horovitz has rightly questioned this interpretation and has declared himself in favour of a derivation from the Arabic root ḏ-lk, "to lighten, to flash". According to this view, Burāk could be explained as a diminutive form. The "miraculous beast would thus have received its name "the little lightning-flash" on account of its fleetness or of its brilliant colour". Yet even this explanation is not wholly convincing. The possibility must also be envisaged that the name Burāk goes back to a pre-Islamic tradition now unknown to us. In general, much that is reported about the steed of the miraculous "night-journey" will derive from pre-Islamic tradition. It is, however, difficult to uncover the various links in all their detail.

The later development in the conception of the Burāk is to be discerned rather in figurative representations than in literary documents. This statement is also valid in relation to the fact that eventually al-Burāk received a human face. Horovitz has pointed to a hadīth of Ibn 'Abbās, transmitted by Thalabī (d. 1035), as the earliest literary evidence declaring that al-Burāk had "a cheek like that of a man". Balkhi, in his description of the ruins of Persepolis (beginning of the 6th/12th century), designates the monster in the gateway of Xerxes, "whose face resembles a human face", as Burāk. The earliest picture yet known of al-Burāk dates from the year A.D. 1131 (in a MS. of the Dī'amī al-Tawārikh of Rashād al-Dīn). None the
less, it is clear that the real development occurred within the sphere of the visual arts. The decisive stimuli arose out of those forms of representation which—from the figures guarding the gates of Assyrian palaces onwards—remained alive in the shape of centaurs, griffins or sphinxes and have again and again reappeared as artistic forms. The winged creatures, which in the course of time became petrified into a formal element no longer understood, obtained at last a new meaning in connexion with the legend of the *mir'ādī* of the Prophet. In illustrations to Persian poetry, and especially to the works of Niżām-al-Burak, with his rider and with Gabriel as guide came to be a much cherished subject. The splendidly composed picture of the “journéy to heaven” in the Niżām MS. Or. 2265 of the British Museum constitutes the highest point of artistic achievement in this evolution.

**Burāq** (or more correctly, *Barāk*) Ḥādīb, the first of the Kutlugh Khāns of Kirmān. By origin a Kara-Khitayan he was, according to Diuwaynī, brought to Sultan Muhammad Khwārazm-Shāh after the defeat of the Kara-Khitay on the Talas in 1220 and taken into his service, in which he rose to the rank of ḫādīb or chamberlain. According to Nasawi he had held this same office at the court of the Gūr Khan or ruler of the Kara-Khitay. Being sent on an embassy to Sultan Muhammad he was forcibly detained by the latter until the final collapse of the Kara-Khitay and was only then admitted into his service. When the sultan had met his death in flight before the Mongol armies and his son Djalāl al-Dīn Khwārazm-Shāh [q.v.] had taken refuge in India, another son Ghiyāth al-Dīn Pir-Shāh succeeded in establishing himself in Persian ʿIrāq (winter of 1221-2). Here he was joined by Burāqī, whom he appointed governor of Isfahān. On account of a quarrel with Ghiyāth al-Dīn's vizier, Burāqī obtained permission to leave for India in order to enter the service of Sultan Djalāl al-Dīn. Attacked *en route* by the governor of Kirmān he not only defeated his assailant but made himself master of his territory, and he then renounced the idea of proceeding to India (1222-3). This is Diuwaynī's version; Nasawi represents Burāqī as being appointed governor of Kirmān from the outset. When Sultan Djalāl al-Dīn appeared in Kirmān in 1224 he confirmed Burāqī's appointment, though not without some misgivings. In 1226, whilst campaigning in the Caucasus, he received information that Burāqī had risen in revolt. In his haste to deal with the rebel he travelled, according to Diuwaynī, from Tiflis to the borders of Kirmān in the space of 17 days. He then turned back, either because of Burāqī's conciliatory attitude or because of the strong defensive measures he had adopted. In 1228 Ghiyāth al-Dīn, having quarrelled with his brother, came as a fugitive to Kirmān. His mother was forced to marry Burāqī against her will and was then accused, together with her son, of complicity in a plot against his life. They were both put to death though Diuwaynī and Nasawi disagree as to the details. According to the former Ghiyāth al-Dīn was executed first; according to the latter he was kept a prisoner for a time after his mother's death and there was even a rumour that he had escaped to Isfahān. Diuwaynī relates that Burāqī now approached the Caliph announcing his conversion to Islam and asking to be recognised as an independent sultan. The Caliph granted his request and gave him the title of *bulūq sultan* (“Fortunate Sultan”). In 650/1253-2 the Mongol commanders operating in the Sittān area called on Burāqī to submit to the Great Khan. He excused himself from proceeding to Mongolia in person but sent his son Rukn al-Dīn instead. Rukn al-Dīn was still *en route* when he received the news of his father's death, which occurred in the late summer or early autumn of 1235.

was organised, under the suzerainty of Kaydu, a kingdom completely independent of the Great Khan. Kaydu and Burak hailed each other as anda ("blood brother") and an agreement was reached that the princes should live in the mountains and on the steppes, keep their herds of horses out of the cultivated areas and not exact from the population anything beyond their legal dues. Two thirds of Mā warāʾ al-Nahr were left to Burak but the government of the cultivated areas was placed in the hands of Masʿūd Beg, a governor appointed by Kaydu. At the time of this kuriltay Burak had expressed his intention of invading the territories of Abaka, the Il-Khan of Persia, and had been encouraged by Kaydu, who hoped to see the back of a dangerous rival. Masʿūd Beg was sent to Persia, ostensibly to collect the revenues due to Burak and Kaydu, but in reality to spy out the land. Soon after his return Burak crossed the Oxus and occupied parts of Khurasān and Afghanistan. However he received little support from the troops sent by Kaydu and was soon left in the lurch. On 1 Dhu l-Hijjah 668/22 July 1270 Abaka inflicted a crushing defeat on his opponent, who withdrew across the Oxus with only 5,000 men.

Accounts differ as to how Burak passed the last year of his life. According to Waṣṣāf, he spent the winter in Bukhārā, where he adopted Islam and assumed the title of Sultan Ghīyāt al-Dīn. In the following year he undertook a campaign in Sīstān, but his plans were frustrated by the defection of several princes and he was obliged to throw himself upon the mercy of Kaydu, who caused him to be poisoned. According to Raṣḥīd al-Dīn's more circumstantial account the defection of the princes took place immediately after Burak's retreat across the Oxus. He appealed for help to Kaydu, who advanced very slowly at the head of a large army, and an agreement was reached that the al-Hasan's estate at Fam al-Silh, near Wasit, at a reasonable price, and Burak and an ample supply of fine salt which once made the region a famous market for horses, camels, and water from al-Khubub, and the central position of the city on the Basra—Medina route were all factors in developing Burayda into one of the great trading centres of Arabia. The mixed population, comprising settled elements of Ḥab, ʿAnaza, Mutayr, ʿUtyāba, and Banu Tamīm, traded throughout the Arab world. Men from Burayda belonging to the corporation of ʿUqayl became known from Cairo to Bombay as livestock dealers and caravan men.

The origin of the city is not clear. Vāqīṭ mentions Burayda as a watering place of Banū Daibina of the tribe of Ḍabs, and the modern Arab geographers, al-Khāndī and Ibn Bulayhid, accept this toponym as the source of the present city's name. Without further evidence, this identification appears still unestablished. The date of the city's founding is confirmed by no sound evidence, although local tradition and Western travellers agree roughly that the 10th/11th century is a reasonable possibility. Caskel places the founding of Burayda in 950/1063-4, without citing his source. In any event, the city is first mentioned as a political power by the chief historian of modern central Arabia, Ibn Bighr, who gives a brief note on a battle between Burayda and ʿUnayza in 1037/659-60.

The local history of Burayda is to a large extent the story of four families and their participation in the politics of central Arabia, either independently or as provincial governors. The first was Āl al-Duraybi (or perhaps al-Buraydi, v. Ibn Laḥbūn, 22), from al-Ḥānūk of Banu Tamīm, whose ancestor, Raṣḥīd al-Duraybi, Corancez credits with the founding of Burayda. Little is known of this family other than the fact it carried on an internecine struggle with its cousins, Āl ʿUlāyyān of al-ʿAnākīr. The perennial feud with ʿUnayza caused Āl al-Duraybi to assist military assistance from Āl Saʿūd in 1874/768-9. This step soon brought Burayda into the Saʿūd orbit, placed Āl ʿUlāyyān in power, and made al-

Bibliography: Yaʿqūbī, Tabāri, index; Ibn Tayfūr, Kuṭūb Baqḥādād, Cairo ed., 102, 113-8; Ibn Khallīkān, no. 119 and Cairo 1948, i, 258-61; Thaʾlābī, Latīf al-maʿārīf, ed. de Jong, 73-4; G. Le Strange, Baqḥādād during the Abbasid Caliphate, Oxford 1900, 243-6. (D. SOURDEL)
Kašm the cockpit of the long struggle between Al Rashid of Djabal Shammar and Al Sa‘ud.

Al ‘Ulayyân ruled Burayda from 1313/1757-6 to 1326/1808-9 as governors of Al Sa‘ud and, at times, under the Turko-Egyptian invaders from al-Hîdżâz. Their unreliability brought about the appointment of Dîawl b. Turkî Al Sa‘ûd as governor of al-Îsna from 1265/1848-9 to 1270/1853-4 and the establishment of the family of Mu‘annân of Al Abî Al-Ka‘îyl of ‘Anasza as governors of Burayda from 1280/1863-4 to 1326/1908-9.

When Al Sa‘ûd finally regained al-Îsna in 1326/1908-9, the redoubleable ‘Abd Allâh b. Dîawl Al Sa‘ûd, son of the former governor, was installed in Burayda as governor of al-Îsna in order to eliminate permanently the local intrigues in this strategic area. ‘Abd Allâh was succeeded by his cousin, ‘Abd al-Azîz b. Musa‘ûd Al Sa‘ûd, the present Governor of Hâfîlî, and later by ‘Abd Allâh b. ‘Abd al-Azîz b. Musa‘ûd, now Governor of the Northern Frontiers.

The anarchical years preceding the consolidation of the kingdom by King ‘Abd al-‘Azîz Al Sa‘ûd discouraged the commerce of Burayda, and his subsequent conquests of al-Îsna and al-Hîdżâz gave central Arabia unrestricted access to ports on both coasts, cutting into the entrepreneurial trade of al-Îsna. Since 1374/1954-5 the destruction of the city’s most famous landmarks, the great city walls and citadel of Al Mu‘annân, and the construction of modern government buildings, schools, and hospitals have altered the formerly grim face of Burayda.

The accuracy of this identification seems open to question, with the possibility existing of confusion with some place actually on the Persian coast, cutting into the entrepreneurial trade of al-Batîna; it also lies on the principal route from Dubayy through al-Zâhîra [q.v.] to Dîawl b. ‘Ibrî and Naswâ, the capital of Inner Oman and long the seat of the Imâm of the Ibâds. The inhabitants of the oasis, numbering about 10,000, belong in the main to the tribe of Nu‘aym (the two major divisions of which are Al Bû Khuraybân and Al Bû Shâmsî), some of whose members are nomadic or semi-nomadic, or to the tribe of al-Zawâhir, a settled folk not found in any number outside the oasis. Other elements in the oasis belong to Bâtî-în, Bâtî Kûfî, Bût Hâmîr, Bût Fa’lâsâ, and Al Bût Fa’lâh.

The network of aqueducts running under the settlements has resulted in the interdependence of the villages, some of which are in a position to control the vital water supplies of others. Dates, alfalfa, vegetables, and fruit—including mangoes and sweet and sour oranges—are exported from the oasis, the principal port of which is Dubayy [q.v.]. The town markets do a good business in livestock and are distribution centres for the tribes and communities of the interior.

Al-Buraymi has been identified as the place early Arab geographers and lexicographers call Tu‘âm (La gives the variant Tu‘âm, and other variants are listed in Lane), described as a centre for the purchase of pearls (whence tu‘âmiyya as a synonym for iswâ’ and di‘âra). The accuracy of this identification seems open to question, with the possibility existing of confusion with some place actually on the Persian Gulf. Authors from eastern Arabia also give al-Dîaww and al-Dîawf [q.v.] as old names for the oasis.

Very little is known of the history of the oasis before the nineteenth century. According to local historians it was occupied by the army which the Caliph al-Mu’tadîd sent overland from al-Bahrayn in 280/893. Between 1353/1934 and the outbreak of World War II, discussions took place between Saudi Arabia and the United Kingdom, acting on behalf of the Ruler of Abû Zaby, regarding the southern orders of Ziyâd b. Abîhi. According to Ibn Hâdjar he died in 63/1265.

(K. V. Zetterstéen-W. ‘Arafat)
and eastern boundaries of Saudi Arabia, but Buraymi was not then specifically at a point at issue. In 1371/1952, a Saudi Arabian official (amir) arrived in the oasis and established himself in Ḥamdā waṣa to assert Saudi sovereignty against that of Abū Zaby and Muscat. In 1373/1954 the United Kingdom and Saudi Arabia agreed to refer to arbitration the dispute arising out of this action and out of conflicting claims to over 70,000 sq. km. of territory to the south-west of al-Buraymi. Thanks to the arbitration, the geography, modern history, and demography of al-Buraymi have been recorded in great detail, both sides submitting to the arbitral tribunal elaborate memorials in which these matters are treated. Saudi Arabia contended that the whole oasis is an integral part of its Kingdom. The British maintained that exclusive sovereignty in the oasis should be vested in the Ruler of Abū Zaby and the Sultan of Muscat. The British held that the traditional loyalty of Nuwaym (predominant in al-Buraymi town, Ḥamāṣa, and Saʿrā) is to Muscat, and that of al-Zawāhir (predominant in most of the other settlements) is to Abū Zaby.

Following British charges of Saudi bribery and other misconduct, the British member of the tribunal resigned, whereby the arbitration lapsed in Muḥarram 1375/September 1955 without the tribunal having had an opportunity to pass an opinion on the charges or the merits of the case itself. In Rabīʿ I/October 1955 troops of the Trucial Oman Levies under the command of British officers occupied the oasis, which was partitioned between Abū Zaby and Muscat. The Sultan of Muscat appointed a wāli in al-Buraymi town, and the Ruler of Abū Zaby designated one of his brothers as his representative in the oasis. Saḵr b. Sulṭān, the paramount shaykh of Nuwaym, and other shaykhams with adherents went into exile in al-Dammām, the capital of the Eastern Province of Saudi Arabia.

**Bibliography:** R. Basset, *Les Manuscrits Arabes des Bibliothèques des États-Unis du Madīn and Temaizin...*, Algiers 1886, 46-54; I. Goldziher, in *Revue de l'Histoire des Religions*, Vol. xxx, 304 ff.; Broeckelmann, I, 264-265 (R. Basset); *BURDJ* (pl. buriḍi, abriḍi, and abridi), square or round tower, whether adjacent to a rampart or isolated and serving as a bastion or dungeon.

Special meanings: each of the twelve signs of the zodiac, considered as solar 'mansions'; more or less fortified country house standing alone amidst gardens (Eastern Maghrib); tower used as a lighthouse (burdi al-mansir); tower used as a dovecote, especially for carrier pigeons (burdi al-hamim; see J. Sauvaget, *La poste aux chevaux dans l'empire des Mamlouks*, Paris 1941, no. 157); masonry pier of a bridge; mode (in music), slice, quarter of certain fruits having natural divisions (melons, oranges); row of grains in a head of corn.

In the diminutive feminine al-Buraydija was the name given by the Moroccans to the fortress of Mazagan (see AL-QADISIA) during its occupation by the Portuguese.

The word certainly seems to be connected with the Greek πύργος and the Latin burgus (whence Germanic burg) and has also passed into Hebrew and Aramaic (see Fraenkel, *Aram. Fremdwörter im Arab.*, 235). But the borrowing must be very old, for it is to be found already in Sabaean inscriptions (see De Landberg, *Glossaire Datinois*, 1, 148).

(G. S. Colin)

**BURDJ**

I. Military architecture in the Islamic Middle East

The different forms of towers which the word burdi signifies in its usual sense (especially in inscriptions) have always formed the principal elements in the fortifications which were erected in Islamic territories from the years following the Conquest and which were to remain of real importance until changes gradually arose in military ideas as a result of the development of heavy and field artillery. The importance of the protective role played, in the middle ages proper, by these lofty and massive edifices in defending town and citadel ramparts, in serving as defensive strongholds (donjons), or on occasion standing as isolated defensive works (watch-towers, signal towers), should not distract attention from the fact that towers less strictly military in their functions had long existed in the same regions, the buttress-towers which have sometimes happened to be confused with simple architectural devices. To this category—disregarding the minarets of mosques, which have a separate evolution of their own—belong the first specimens of Muslim towers preserved in the Middle East in the ruins of the Umayyad residences, which have a rectangular plan and have their exterior walls appointed with semicircular salients [see Architecture].

These castle-towers, and the towers of fortified enclosures (bașq), most frequently of modest dimensions, are disposed symmetrically so as to lend rhythm to the blind façades and to give height to the entrances, and are usually solid at the base, or else equipped at ground-floor level with strongholds to which access was not easy (entrances being blocked by partition walls or even opening into a residential room), and are at times used as latrines; they differed greatly in effect from the defensive towers of the Roman and Byzantine camps, which were, on the other hand, conceived with chambers on all storeys and were easily accessible to the troops of the garrison who could, in the last resort, entrench themselves therein. They must rather be considered as the adaptation of those round buttress-towers which had been known in the Middle East for centuries, an adaptation that the fortress towers of Sassanid Iran, less perfect in their arrangements than the *castrum* of the times, had always employed. Without being absolutely devoid of any military efficacy, since their upper platforms did allow of fire being brought on their assailants, or at least of a watch being kept on the approaches to a castle, and again without differing very much from the towers of the Umayyad forts erected at a similar period on the Byzantine frontier, they became indispensable accessories of princely buildings, secular as well as religious, whose appearance they enriched.

The essentials of this style, typical of the great Umayyad residences, were however soon to become more flexible. Indeed, the custom of strengthening walls in this way, of a particularly happy effect: when it was a matter of avoiding the monotony of large surfaces in regular coursed brick, was not to disappear completely, for one finds it recurring in an 'Abbasid building of a function as uninaltial as the great mosque of al-Mutawakkil at Samarra, the perimeter wall of which is punctuated by forty-four semi-cylindrical brick towers; but especially it persists in the partially fortified residences, the tradition of which was to be continued later by ribāds and caravanserais, and of which an excellent example is provided, at the end of the 2nd/8th century, by the Irrāt palace of Ukhaydir, with numerous half-round towers (angle towers 5.10 m., intermediate towers 3.15 m. in diameter) each with a small firing chamber on the top to which access is given by a covered gallery itself equipped with loopholes, and a device providing for downward fire throughout the length of the gallery which almost amounts to continuous machicolation, (see Creswell, *A Short Account of Early Muslim Architecture*, in Bibliography).

We thus meet again classical flanking towers which in their turn had been retained in mediaeval Arab fortification, having played a part in the Byzantine defences, where their defensive equipment assured, whatever their size and shape (square, polygonal, circular), an increased protection of the sectors of the curtain walls included between their salients. Not only did the new conquerors retain this principle without improvements, most often they were content to keep up or to restore by makeshift means the remarkable circumvallation walls of the towns they had occupied, in the Syrian sites of Aleppo and Damascus as well as later in Asia Minor (Kayseri) or in Upper Mesopotamia (Amid). There are, however, as many cases where it remains difficult, in spite of frequently copious epigraphical evidence, to establish a firm difference between previously existing work and later repairs of the Muslim era, which reflect the hazards of the much confused historical events. However, clear differences are evident between one region and another, and the provinces which had been longest under Byzantine occupation were to be also those where the tradition
of the older military architecture was to establish itself most distinctly, only rarely allowing the Saljūq and Artuqid creations to display originality in this field. Their towers, which are distinguishable only by a few details of structure and ornament, are similar to the preceding types with their super-imposed vaulted casemates, with variations that are essentially related to the configuration of the terrain and to the particular problems to which the latter gives rise.

More interesting are the remains of the Fāṭimid era preserved in the Syro-Egyptian lands. Certainly there is often a straightforward accumulation of re-used materials, later integrated within more complex systems which render their study difficult.

At this time the experience acquired by the builders during a permanent state of war with the Frankish kingdoms of Palestine, where the Western master-engineers had introduced their own traditions, together with the sudden rise of the Ayyūbid principalities, led to the erection of imposing fortifications which reflected the recent advances in ballistic technique. In the considerable works undertaken at the beginning of the 7th/13th century by al-Malik al-ʿĀdil (specially the citadels of Cairo, Boṣrā, Damascus and Mount Tābūr) and al-Malik al-Zāhir (at the citadel of Aleppo and in the more important fortresses in north Syria) towers are seen to attain gigantic proportions; to strengthen their defensive sectors, but at the same time to make room for large airy quarters capable of housing permanently a large number of troops who would be assured of communication with the galleries of the enceinte, and with the magazines of the interior, by subterranean passages or covered stairs; and eventually to compensate, by the thickness of their walls and the quality of their construction (by then constructions in fine ashlar were normal), for the weakening which the multiplication of fortified chambers and gangways could have caused. This is shown for example by the two towers of the citadel of Damascus (dating from 606/1209-10) shown here in section. The first (Fig. 1), an asymmetrical salient of great size (rectangular plan of 27 m. by 13 m., walls 3.40 m. thick, projecting 8 m. from the curtain wall, attaining a height of about 25 m.), composed of three vaulted rooms, easily accessible and defended by five loopholes pierced in tunnel-vaulted recesses; its balcony, rising 18 m. above the level of the courtyard, is surrounded by a chemin de ronde equipped with loopholes (five in number, as in the lower rooms), leading to four machicolated brattices and bearing a crenellated parapet with 15 arrow-slits in the merlons, an arrangement completed by roughwallings in wood, thus showing the importance attached to the upper works in the general plan of the construction. The second tower (Fig. 2), which well deserves the name of donjon, is distinguished from the former only by its approximately square form (21 m. by 23 m.) and by the presence of a large central pillar, sufficiently massive for a small cell to have been contrived within it at its top storey. To these enormous rectangular bastions, where one occasionally notices, as in the donjon of Boṣrā (612/1215-6), the existence of reception chambers, must be added the less powerful salient towers, which could command the chemin de ronde without obstruction, and the isolated post-towers whose role is essentially one of surveillance.

After this the Mamluk period, where no innovations in the means of attack and defence are at first apparent, was content to continue this splendid heyday of military architecture in Syria. The towers underwent the effects of a slow transformation which substituted small smooth blocks for the powerful courses and the rugged embossments of Ayyūbid masonry, and which delighted in showing off, by sheer virtuosity, a variety of constructive techniques, while enriching the whole with delicate relief
ornaments and equally extraneous polychromatic devices. Mention must, however, be made of a work so remarkable as the Tower of Lions (burdí al-Sibd*) at Tripoli, a coastal fortification of large dimensions (28.50 m. by 20.50 m.) and of an imposing appearance due to the equilibrium of its proportions and a sure which saw also the erection by the sultan Kayt-bāy of an impressive fortification over the entrance of the citadel of Aleppo in place of the towers of al-Malik al-Zāhir. About this time there appeared the embrasures for pieces of ordnance, and terrepleins to bear heavy cannon, which marked the vain

Fig. 2. Ayyūbid donjon at the citadel of Damascus (from J. Sauvaget)

feeling for ornament, agreeing perfectly with a complex interior composition which corresponds, in its two great upper rooms (Fig. 3), to variations imposed by the requirements of the defence (numerous firing ports, arrangements assuring the safety of the doors on the ground and other storeys) and the inclusion of living quarters (the cistern, mosque, and windows lighting the upper part). The style may be recognised as that of the end of the 9th/15th century, attempt to adapt the tower to those very conditions of warfare which were to bring about its rapid disappearance.

Meanwhile, however, a somewhat weak synthesis, though more westernised in certain constructional details, had been conceived by Ottoman military architecture, which had been able to erect, in order to command the passage of the Bosphorus and maintain the investment of Con-

stanbul, the last specimens of fortresses where the utilisation of cannon was reconciled with adherence to the principles of mediaeval fortification. The towers of the two castles of Anadolu Hisar (begun 793/1390-1) and Rumeli Hisar (dated by its inscription of 856/1452), to which may be added those of the castle of Yedi Kule (erected shortly after this by Mehemmed II Fatih within the enceinte of his new capital of Istanbul), are characterised by the perfection of their system of defence (Fig. 4), realized at Rumeli Hisar on a colossal scale (diameters

Fig. 4. Reconstructed section of an Ottoman tower of Rumeli Hisar (from A. Gabriel)

of three donjons ranging from 23.80 m. to 26.70 m., thickness of walls varying from 5 m. to 7 m.), and by certain features (hollow cylindrical interiors divided into many storeys by joists, circular chemin de ronde surrounding, at the upper level, a covered drum with conical roof) which show the imitation of the flanking towers of the Genoan enceinte of Pera.

sometimes as much as ten metres high, with crenellated parapets; their thickness was considerable, averaging three metres. Towers, set at intervals a bowshot apart, round the curtain walls, which, generally they were semicircular, 5-6 m. in diameter, less usually square or oblong, and most usually built on the outer side of the ramparts. The angle towers were often large bastions, solid at the base, containing at least one defensive chamber, and higher by one storey than the curtain.

The gates gave access to the interior of the enceinte by a direct passage with an open section between two covered rooms, which made it possible to overwhelm any opponent who might have forced his way into the building; these were flanked by towers with several tiers of defence. The solid mass of the gateway itself gave on to the interior of the ramparts. Town gates sometimes returned to the monumental arrangements of those of the Roman empire, opening by a double or triple passage.

No fortifications are known which could have been erected in the Mediterranean provinces of Spain after the reconquest by Justinian; but the Byzantine fortresses of Africa are well known to us. The plans of the plains fortresses or castella are very regular in form. Only the square tower is used, external to the curtain and projecting markedly; it is always solid at the base. The construction is of stone with no additional brickwork. When older materials are not re-utilised, coursed rubble preponderates, strengthened by freestone lacing-courses. The curtain, less thick than in the 3rd/9th and 4th/10th centuries, bears a chemin de ronde with crenellated parapet which gives access to the towers’ defensive chambers. The gate is no more than a simple passage, with straight corridor. In all this we see only the survival, and frequently the impoverishment, of the methods of the Late Empire.

2. Ifriqiya: fortification from the 3rd/9th to the 6th/12th century, and its continuations.—Aghlabid fortresses.—Aghlabid fortification is known from vast complexes, the enceintes of Susa and Sfax, which go back to the 3rd/9th century in the main lines of their construction: e.g., the ramparts of unprepared or roughly prepared rubble, with lacing-courses at the corners, and with freestone toothing. The curtain is flanked with oblong towers—canted with a batter in exceptional cases—one storey higher than itself. In Susa the chemin de ronde is in places carried on a deep arcading. Some small ribâb are very similar to Byzantine forts.

Mixed with these local traditions are some Western influences, especially in the Susa ribâb and the primitive ribâb at Monastir. Their rectangular enclosures are flanked, at the corners and at the middle of each side, by bastions which are nearly all semicircular. Within there are some buildings against the four walls, leaving the large courtyard free. The influence of the Umayyad castles of Syria, themselves derived from the Roman castella, is noticeable here. The pyramidal form of some towers, imitated from the lower stages of minarets of the same period, reveals Egyptian influence.

Rammed earth (pisé) would have been used in some rapidly erected fortifications. In the ramparts of al-Kayrawân and in the government towns of al-‘Abbâsîyya and al-Rağîda it is probable that bricks of mud or baked earth replaced stone. The old traditions of the desert countries paved the way for other eastern influences coming from Mesopotamia and Persia.

All this Aghlabid fortification is a happy and lively synthesis of a still dominant local tradition and of importations from the East.

3. The fortification of Muslim Spain and its expansion in Africa.

i) The 3rd/9th century.—Muslim fortification in Spain is understood here as not beginning until the middle of the 3rd/9th century, with the Conventual of Merida, built by the Amir Abd al-Ra‘man II. This castle, which guards the approach to the bridge over the Guadiana, forms an almost regular oblong. The curtain-walls are flanked with oblong towers which do not project far beyond them and are very closely spaced. Without doubt the architect was inspired by the counterpart towers which punctuate the walls of the great mosque of Cordova. At the entrance one finds the arch of horseshoe shape (the intradosial curve being greater than a semi-circle) which is as dear to Umayyad as to Visigothic art. Pilasters support the springing of the entrance arch and protect the hinges of the door-leaves. The construction is in freestone, which is employed by preference in Visigothic architecture and to which the initial phase of Umayyad art remains faithful. Here, however, it is a question of the reutilisation of stone from previous work, and the arrangement of it as headers and stretchers, dear to the Cordovan architects, is never regular.

ii) The 4th/10th century.—Under the Cordova caliphate, military architecture was rapidly developing, as indeed was all monumental art. There are many variations in the plans employed: in mountainous country the enceintes are adapted to the irregularities of the terrain, and on the plains they tend to a geometric regularity which is fully realised in works of the more modest dimensions.
The towers, oblong or very rarely polygonal, project more noticeably than those at Merida and are more widely spaced out. The enceinte is never doubled and has no keep, and no buildings are erected in the interior.

The gateway gives on to a straight passage of little depth. In the larger enceintes it opens between two towers, and in the smaller castles is protected by a bastion. The curtain is of varying height, from 7 to 10 metres, and bears a chemin de ronde with its exterior parapet capped, as on the towers themselves, with pyramidal merlons. This form of merlon, different from those which were employed in the Middle East and Ifriqiya, seems to be derived from the crenellated chemin de ronde of the Byzantine Empire, the capping of which was pyramidal in form.

The stone header and stretcher courses, regularly arranged, which are at their best in the great monuments of this dynasty, are employed in the finest fortresses. But usually a more economical material is preferred, a concrete of gravelly soil and lime, consolidated in formwork; this had very ancient Iberian origins and doubtless never ceased to be employed in the construction of provincial and popular buildings. In certain fortifications in mountainous sites rubble appears. Frequently also dressed stones, in varying proportions, are used together with the concrete cast in forms.

All the Umayyad fortresses succeed, in their simplicity, by the precision of their proportions—often very different from one fortress to another—and by the happy balance of their masses. The very spirit which is exhibited in military architecture is that which inspired the whole art of the caliphate, a twofold soliciquate for originality without exclusiveness and for faultless harmony.

iii) The 5th/11th to 7th/13th centuries in Spain.—The 5th/11th century, under the mulak al-faukhāf, sees the emergence of the palace-fortresses which, in a complex of moderate dimensions, array a whole range of rooms against the ramparts. This type of isolated palace perhaps existed also in the preceding period. When one sees a Mudejar castle, like that of Santa Maria del Puerto, following the lines of the Sûsa ribât (itself inspired by the Syrian Umayyad form), one is tempted to believe that the foundation in question has had a Muslim ancestry within Spain itself, doubtless deriving from the founder of the dynasty who had tried to re-create in Andalusia something of his lost motherland. The castle of al-Rušafa, which preserves the name of a palace of his ancestors, did manage to recapture the plan of the great rural residences of the Caliphs of Damascus.

Outside the Castillejo of Murcia stands a fortress of regular oblong plan with towers closely spaced; but living quarters fill the entire space between the ramparts and the patio, the voids of the towers are used to break up the largest rooms medially, and the courtyard is replaced by a garden of sunken parterres with crossing paths.

On the other hand, the enclosures of towns or of large fortresses no longer tend to a geometrical regularity as in the days of the caliphate; the trace of the curtain walls is adapted to the lie of the land. Sometimes they are still flanked by narrow, closely-spaced towers, but more frequently the bastions are of greater size, and, while defending a more or less regular interval, they strengthen the irregularities in the trace or the weaker part of the ramparts. Occasionally there is a double enclosure with inner and outer wall, and the more vulnerable points may be strengthened by barbicans. The kasaba, forming

an acropolis above the town and containing the royal residence, has always its own single or double enceinte.

The bastion with superposed vaulted rooms makes its appearance at this time. These powerful works are arranged round the enceinte itself, and not as donjons or keeps. Muslim Andalusia brings in a new form at the same period, the albarrana tower, which projects in front of the curtain to which it is connected by a wall, through which usually runs an arcade. The vaulted bastions and the albarrana, which give excellent flanking protection, may be combined.

The gate, which opens sometimes between two towers, sometimes under the wing of a sharply projecting bastion, has always an angled passage; at the entrance and exit are two arches with springing on pilasters, which enclose the housing of the door-leaves. The portcullis is not found.

Freestone becomes increasingly rare, except in the gateways, and is sometimes combined in lacing courses with ashlar or concrete. This latter material almost always preponderates.

Thus, perhaps as a matter of necessity—for Christian pressure had become more and more formidable and had extended its conquests—the fortification of Muslim Spain made great progress in the 5th/11th and 6th/12th centuries.

iv) The 5th/11th to 7th/13th centuries in Africa.—

The same type of Spanish fortification tended to spread, from the beginning of the 6th/12th century, in the African empire of the Almoravids and the Almohads, the rulers of Muslim Spain. The first Almoravid fortresses are of rubble, and still remain within the Maghribi traditions in their coursework and in other details; but in fortification, as in mosques and palaces, Andalusian influences quickly asserted their superior sway. This is the great period of concrete enceintes with strongly projecting oblong towers, arranged at more or less regular intervals. In Africa the lines of this fortification tended to be simplified, as large vaulted bastions and albarrana towers do not appear. However, some innovations occur in the fortified gateway, where the opening is always framed by two towers, usually strongly projecting, and the gate itself constitutes a massive bastion which extends to the rear of the curtain and contains a passage with two or three bends, with an undefended gallery. The arch of the gateway, its jambs, and their framing, show a rich decorative treatment of carved stone. The great Almohad gateways of Rabat and Marrakesh are among the finest—certainly the richest—of fortified gateways of Islam.

4. Fortification in the Muslim West from the 8th/14th to the end of the 9th/15th century.—In spite of the fundamental unity of the architectural styles then current in Muslim Spain and the Magrib, the evolution of fortification was different in the Peninsula and in Africa. Spanish Islam was then confined to the small kingdom of Granada, a vassal of Castile but often in revolt against its suzerain, which depended on the shelter of a fortified frontier. A good number of the castles of this frontier imitated some of the Christian fortresses which confronted them. Built of stone, with a double enceinte and a donjon, they appeared as strangers, almost, in the Muslim fortification of the West. But soon Christian influences, far from revitalising the traditions of Muslim Andalusia, became degraded into bastard types. They are not found in the capital itself, nor in the works of rather later date.
We have here the forms created in the 5th/11th and 6th/12th centuries reproduced without much modification. The gateways with their sinuous passages are powerful works. At the Alhambra in the 8th/14th century, and at the castle of Gibralfar at Malaga, large bastions, widely spaced, replace the smaller and closer towers of the common enceintes. Where the introduction of cannon gave no time for modifying the fortification, rudimentary cannon platforms were installed at the feet of the earlier works.

In North Africa, in the kingdoms of Fez and Tlemcen, Almohad traditions were maintained almost unchanged. Curtains and towers were made of concrete. The gateways, always imposing and with sinuous passages, were rather more often constructed of brick than stone. Irfikiya, while admitting some Almohad influence, remained faithful to stone and to her traditional forms of detail. Thus, in this long period, fortresses, as well as palaces and sanctuaries, scarcely went beyond a mere repetition of the forms of the past.

5. Fortification in modern times in the Muslim West.—The development of artillery brought about a profound transformation of ideas of fortification in all European countries; but North Africa created no new forms, being content to imitate more or less faithfully the models which Europe provided. Again, she admitted these imports only when it was necessary to defend herself against a European nation, as in the coastal regions. Everywhere else, however, the older mediaeval fortification continued to prevail; the governments which divided Barbary had only to keep order among, or to bring to subservience, tribes who were without cannon.

In Morocco, the fine fortifications which the Portuguese erected in the 10th/16th century at different parts of the coast were imitated only accidentally at the Sa'did ḥṣaba of Agadir. All other coastal forts were the work of Europeans, often renegades, in the service of the sultans. In the 18th century the fine complex at Mogador, planned by a Frenchman, was the work of an English renegade and Italian architects. These European-inspired types of fortification were imitated in the 19th century by local master-builders.

In Algeria and Tunisia the Ottomans introduced a modernized type of fortification more or less inspired by European models, and fairly close to the works which were being erected here and there on the Moroccan coast. The gun bastions and the enceintes, often defended by ditch and counterscarp, were still high; low-built fortifications in the Vauban style were unknown in North Africa.

Thus the Muslim West, in its fortresses as in all its military organisation, showed its archaism. The few borrowings it made from Europe were overlaid on mediaeval traditions, but did not modify them.

6. The fortified Berber works.—North Africa, Morocco in particular, had fortified buildings also in several mountainous regions and in the oases bordering the Sahara. Some stone villages and trading stations, of a plan almost always irregular, had no enceinte except such the constructions whose joint exterior wall formed the rampart; but almost everywhere this old architecture made way for buildings in pisé and mud-brick brought from the oases. Some villages, especially in the hills, are irregular in form and are made of an assembly of houses presenting a continuous front. But the architecture of the oases has its own very characteristic design and decoration. On the plains the fortified villages (ḥusār) are of very regular plan; they are surrounded by an enceinte pierced with gates which are often of great size and protected by the means of angle bastions. The influence of Hispano-Moorish fortification is here very apparent.

The isolated residential castle, the Moroccan ṣa'iğrem, has a more distant origin. It has the form of a castellum with four angle-towers, less commonly with two. If the plans are in the Roman tradition, the plastic art is of a more ancient stock: the pyramidal towers, often with an entasis, derive without doubt from Pharaonic Egypt. The minarets of the early centuries of Islam in Barbary were also often truncated pyramidal towers. In the gates and on the wall cappings of some ḥusār one finds in many cases the Moroccan oases a rich ornament in mud-brick, derived from Hispano-Moorish geometrical elements. The older Berber buildings have taken in, at different times, forms of the Muslim middle ages which had been adopted by official works of fortification in the country.

Hence Barbary, Morocco in particular, is an astounding museum of fortifications inspired by very ancient traditions.

(H. Terrasse)

III. The tower in Islamic architecture in India

1. General.—The word burdż in Urdu, whence it has spread into other languages of India, means always 'tower' or 'bastion', including those towers on the walls of fortified palaces whose function is decorative and residential rather than functional in any military sense, those bastions which, taking the form of a protuberance in the trace, may in fact include several tower-like buttresses, and also those massive bastions within the enceinte, built after the introduction of cannon, as mountings for heavy pieces of ordnance.

The following accounts relate to the use of towers only; the history of Islamic fortification in India is treated in a separate article (see HISAR). Minarets (Urdu minār) have a different development and are not considered here.

2. The Dihli Sultanate from the 6th/12th to the 10th/16th century.—The earliest Muslim invaders had found a land already well provided with fortified works, of which Hindū India had a long tradition which remained active later wherever Islam had not spread; their earliest static military enterprise was the occupation and modification of existing works. In Dihli, for example, it was the old fort of Prthvirāj Cāwān, kil' a Rāy Pithorā, which was garrisoned first by Muslim troops, and within the citadel of which (Lāl kōt) the earliest Indian mosque, named Kūwāt al-Īslām, was erected in 587/1191 by Kūth al-Dīn Ayybak. The curtain here is faced by closely spaced towers, defended by a broad ditch, with gates set in the re-entrant angles of powerful bastions formed
by a bulge in the trace with several small counterfort towers. Most of the standing fortification is probably of the period of 'Ala‘ al-Dîn Khalîjî, c. 704/1304 (Beglar, ASI Report IV, 1874), probably following the trace of the Hindu work; the towers are for the most part counterforts of shallow projection. The walls of 'Ala‘ al-Dîn’s newer capital Siri were built at about the same time to the north-east of the old capital (Campbell, Notes on the history and topography of the ancient cities of Delhi, in JASB, xxxv, 1 [1866] argues that Siri was the name given to the ‘Kutb citadel’, i.e., Lâlki, and that the site now generally accepted as Siri was built by Bahlîl Lôdî in the 10th/16th century; this is convincingly refuted by Cunningham, ASI Report I, 1871); some stretches of walling remain, with semicircular battered bastions spaced about a bow-shot apart, capped like the walls with merlons, and with a continuous

Fig. — Section of angle bastion at Tughluqabad
A — Battlements; B — Mural gallery; C — Exterior gallery (access from mural gallery in curtain); D — Inner vaulted corridor; E — Bolster plinth; F — Rock scarp.

chemin de ronde supported on an arched gallery. The principles employed are similar in the new capital, Tughluqabad, built in 720/1321-2 by Ghiyâth al-Dîn Tughluq, and its appendage 'Adilâbâd built by Muhammad b. Tughluq in c. 725/1325: the walls of both, of rubble core faced with rough quartzite ashlar, are punctuated with strongly projecting semicircular bastions, and these and the walls, both of which are strongly battered, have three tiers of defence consisting of external gallery, main mural gallery, and battlements, the latter with two ranks of loopholes. The rock outcrop below the wall trace is scarped, over which is a bolster plinth faced with masonry to the base of the wall proper, forming both a continuous buttress and a protection against sapping (see Fig.). The bastions are most closely spaced around the citadel. Gates open between two bastions, and are often defended by barbicans. 'Adilâbâd is defended further by a bailey and outer wall. Within many of the towers are the remains of grain silos. The tomb of Ghiyâth al-Dîn forms a strong fortified outwork to the south of Tughluqabad, with similar bastions except for the absence of an outer gallery.

Besides 'Adilâbâd, Muhammad b. Tughluq formed yet another ‘city of Dihli’ with the building of Djahânpanâh (725/1325), the walls of which enclosed the ground between Kîl‘a Rây Pitthorâ and Siri; these have semicircular counterfort bastions similar to those of 'Adilâbâd, though without the external gallery, and are at one point interrupted by a dam and sluice, called Sât Palâh, obviously to retain water within the walls for the use of the defenders.

This reign saw the Dihli diaspora and the transfer of the capital to Devagiri, renamed Da’lânabâd (q.v.). The three lines of defences between the pass and the acropolis consist of walls with regularly spaced battering round bastions, projecting less than in the contemporary northern work, and without exterior galleries. Bastions round the gates are larger and of greater projection, some being of the form of a half ellipse; a succession of rounded bastions forms a hornwork with two courts where the city is entered over the lower moat. The many modifications made during the Bahmanî period are referred to below.

Firûz Shâh Tughluq was responsible for building yet another ‘Dihli’, his new capital of Firûzâbâd (755-71/1354-70), which was later sacked by Tîmûr and of which no traces remain beyond his citadel or koldâ, much ruined. Walls and towers here have a strong batter; the towers are semicircular, and it is probable that they were crowned with open kiosks (chatris). Traces of low barbicans outside the gates have angle towers of smaller dimensions, presumably for the use of sentries. The contemporary complex housing the Kâdâm-i Sharîf, which, protected by its sanctity, escaped the Tîmûrid sack, is protected by a strong bastioned curtain which shows the principles of Firûz’s fortification better than the ruined koldâ: walls and towers have lost the bolster plinth, and defence against sapping is effected by small box-machicolations. Many buildings of this period, especially tombs and dargâhs, are contained within fortified enclosures. At this time the burdi is developed as an ornamental feature: mosque enclosures and guldast platforms regularly show angle and end bastions, capped by circular or square chatris or by low domes, always with the typical Firûzîd batter, which is imitated in those purely decorative buttresses, where the slope is carried up into a guldasta finial, which flank the gates of Firûzîd mosques in Dihli (Begampuri, Khîfki, Sandîjar, Kalân masjids: see Dihli, Monuments), of which echoes occur in the Lôdî buildings at Dihli, and in Dâwnapur (q.v.) and elsewhere. Firûz Shâh Tughluq is known to have restored many of the buildings of his predecessors, and, though he speaks of having restored the towers of the tomb built by ibn Tîmûr—i.e., the tomb of Abu l-Fätî Mîhmûd Nasîr al-Dîn at Malikpur—it is probable, from the style, that the corner towers are, at least in their upper stages, Firûz’s work.
It seems that the later Tughluq s and the ‘Sayyids’ created no new fortified works, except that it is recorded that Mubarak Shāh in 824/1421 replaced the walls of Lahawr, destroyed by Timur, by a mud fort. His own tomb (836/1433), however, lies in the fortified complex of the small town of Mubarak-kabād, yet another ‘city of Dihl’, where the towers are small but otherwise differ little from preceding patterns. Sikandar Lodī is said to have built a fort at Agrā in 908/1502; but there had already been a fortress here, and the present fort is the work of Akbar, and it is thus difficult to assess how much of the trace is due to Sikandar.

3. The Deccan forts from the 8th/14th to the 11th/17th centuries. — Here again there were many fortified Hindū works which the Muslims found and later occupied, and to some extent modified even in their earlier years. Their first original production seems to have been at Gulberga (q.v.), where the thick (16 m.) walls are doubled, with towers on the inner curtain. All towers are very solidly built, of semicircular form; many have barbettes added later for the use of artillery, and this modification is to be attributed to the 'Adil Shāhs of Bīdāpur, since an inscription on the Kāla pahār Burdij claims that in 1066/1655 ‘Muhammad ... rebuilt every burdij, wall and gate’ (Haig, EIM, 1907-8). Within the enceinte, on high ground, stands a large isolated masonry bastion, the mounting for a large piece of ordnance. In Bīdār (q.v.), already a Bahmanian outpost, whether the capital was transferred by Ahmad Shāh al-Wall, there had been a double line of Kākatiya fortifications in 722/1322 (Diyā al-Dīn Barni, Ta'rikh-i Firdūs Shāhī, Bibl. Ind., 449) when it first fell into Muslim hands; in the rebuilding of 832/1429-32 Persian and Turkish engineers are known to have been employed, as in a further rebuilding in the time of Muhammad Shāh III (867-87/1463-82) by his wasir Māhmūd Gāwān, after the introduction of gunpowder in the Deccan. The older round bastion is largely superseded by the polygonal variety, although some round and square towers remain; large trapstone blocks with fine joints in the older work give way to smaller rubble set in deeper beds of mortar in the repairs and restorations. The towers are solid at the base, defended by chambers at the same level as the curtain battlements and by their own battlements one stage higher; like the curtain, they are further defended by heavy box machicolations. At the angles of the irregular trace, and also standing free within the enceinte, are large and massive bastions, some of imported trapstone and others of the local red laterite, built as mountings for heavy pieces of ordnance; these may be, as in the Kālānī Burdij, defended by two or more successive machicolated curtains, and may provide room for the accommodation of a large number of troops. The walls of Bīdār town are of the Barid Shāh period (built 962-3/1555-6); the 37 bastions include the massive Mūndā Burdij of two defended stages, approached by steps built on the back wall of the bastion itself, which mounted a long-range gun. The disposition of the bastions is here, as in the case of the fort curtain, variable: they are closest at those points in the curtain most vulnerable to attack. The Cawbārā in Bīdār town, presumed to be part of Ahmad Shāh’s defences, is a tall conical watch-tower, 23 m. high, commanding a view of the entire plateau and lowlands, with a massive circular plinth with guard-room and an internal stairway. There was much activity in the construction of military works in the Deccan in the heyday of the Bahmani dynasty (q.v.): Daulatibād, Bīdāpur, vilgāf, Bīlcpur, Narmāl, Pārendā, Naldrug, Panahāl, Warangal, Golkonda, Mughal, Raypur, etc. At Daulatibād the old defences were strengthened and heightened, in smaller stone or brick, in the time of Akbar. A further rebuilding in the time of Muhammad Shāh I (completed 973/1565), which have of uneven quality since each noble was responsible for one section, have some 96 bastions, mostly semicircular, with embrasures protected by stone hoods. Many are later modified to take heavy guns (inscriptions of Muhammad and ‘All I), one, the Farangī or Tābot Burdij built to accommodate several large dindīls. On high ground, well within the walls, is the Uprī Burdij, a massive cavalier oval in plan and some 24 m. high, built (insc. 992/1583) to mount a large (over 9 m. long, 15 cm. bore) piece of ordnance. The Sherza Burdij, one of the largest, is built out from the curtain, to which it is connected by a broad passage forming a ‘head and neck’.

Later fortifications in the Deccan, constructed or rebuilt during the Marāthā supremacy, generally follow the patterns of the Muslim period.

4. North India from the 10th/16th to the 11th/18th century. — Babur’s conquest in 932/1526 brought no new style of building in its early days, although his interest in the Hindū fortress of Gwalīyar communicated itself to his successors who developed the palace-fort par excellence. His son Humāyūn began yet another city of Dihl, called Dinpanāh, but this was railed by the Afghan usurper Shīr Shāh, who commenced building his own capital of which now little but the citadel remains, constructed on a site identified with the ancient Indraprastha and known as the Old Fort (Pūrān Kīlā, Ki lā-i kuhna). The walls and widely spaced bastions of the trapezoidal trace are of roughly
coursed rubble, while the gates, each flanked by two strongly projecting bastions, are of fine polychrome ashlar. The towers are semicircular, solid to the height of 5 m. with stone rooms and galleries, with small box machicolations; one gate has an internal machicolis, a rare feature in India. Humāyūn's re-occupation of the Purāṇā Kīlā added nothing, and Mughal building of forts starts with Akbar. Sikandar Lodī's fort at Āgrā had fallen into ruin, and was razed and re-constructed in 1572/1564. There are semicircular bastions on the inner and outer curtain, each the same height as the walls; the inner ring is much higher than the outer, reaching 30 m. Outer and inner bastions are concentric, and both have crenellated battlements defended by two or more ranks of loopholes, some protected by stone hoods for downward firing. The inner Ādilī gate on the west is defended by two magnificent half-octagonal bastions, with a blind arcade at ground-floor level finely decorated with marble and polychrome ashlar, a wide arch in each face on the first floor with an exterior balcony, and a defended chamber above with two ranks of loopholes. The bastlements above have some merlons equipped with stone hoods, and others are pierced. Each of these towers is topped by a chaṭārī. The work throughout the walling is in red sandstone ashlar over a rubble core. Akbar's new city (1578-1579) of Fatehpur-Sikrī is undistinguished in its fortification: the outer single curtain is incomplete, and its half-round bastions are simply bulges in the trace. The citadel was enclosed rather than fortified, though boasts one large bastion, the Sangīn Burdi, semi-octagonal with an internal hall, for a guard which was probably ceremonial rather than defensive. The new city was soon abandoned, and Akbar moved back to Āgrā, which was later occupied by his son Dāhāngir. From his time presumably the Mughal Ādilī Burdī (later called Samān ["jasmine"] Burdī), a half-octagon projecting on the river side of the fort summarizing a semicircular buttress; it is of two storeys with open arcades on each face, with fine pictra durā decoration. Some of this work is probably of the time of Shāhjāhān, whose principal buildings were, however, at Dihlī [q.v.] and Lāhāwar (Lahore) [q.v.]. The New Fort at Dihlī (Lal Kīlā's) was commenced in 1648/1638 and completed within ten years. The nearly rectangular trace has semicircular bastions at regular intervals, defended by one tier of loopholes at about half their height and by two rows in the bastlements; the merlons are decorated by cusping. Each tower is surmounted by a chaṭārī. Similar towers on the barbicans are of the time of Awarangzīb. The north and south bastions on the river front are larger, two storeys in height above the level of the courtyard, crowned by chaṭāris Shāh Burdī, Aṣad Burdī; between them is a larger half-octagon, the Muḥāmman Burdī, originally known also as Burdī-i Tīlā on account of a gilded copper dome; the five sides which overlook the river are filled with marble screens. Lāwāhī fort, built by Akbar at about the same time as Āgrā fort (Abū 'l-Faḍlī, Amīn-i Abhārī, Blochmann's trans., i, 438) has a similar Shāh Burdī, also called Muḥāmman Burdī insc. showing completion 1041/1631-2, of great size (45 m. diameter). Manucci in his Storia del Mogor says of these works: "At each place [Dihlī, Āgrā, Lāhāwar] there is a great bastion named the Xaabar Burdī ... they are decorated with architectural adornments of curious enamel work, with many precious stones. Here the King holds many audiences for selected persons, and from it [sic] he views the elephant fights. . . .' (Irvine's trans., ii, 463). Certainly also the Muḥāmman Burdī in Dihlī was used for the emperor's daily darshān (ceremonial showing himself to the people). These Mughal Burdīs had no pretence of being fortified works, and thus what started as a grim military work was transformed into a vehicle for Mughal art. The walls of Shāhjāhān's Dihlī were bastioned, certainly; but these were so rebuilt in the British period that it is not possible to recapture the Mughal arrangement.

**BURDJ [see nūrūn].**

**BURDIYYA.** The Burdiyya regiment was second in importance only to the Bahriyya [q.v.] regiment throughout the history of the Mamlūk sultanate. It was created by Sultan al-Mansūr Kala'ūn, who selected for this purpose 3,700 of his own Mamlūks and quartered them in towers (barbican, sing. burdī) of the Cairo citadel. Hence its name. The sources mention the creation of this unit only when they sum up Kala'ūn's career at the end of his rule, without specifying any date. It was composed of Mamlūks belonging to Caucasian peoples (al-Qurash wa l-'Ās = Circassians and Abkhasians). Al-Makrī (Khālid, ii, 214, II. 22-26) mentions Armenians (Arman) instead of the Ās. The Khuṭābiyya and Kipčakīs mentioned by him in the same passage as performing duties pertaining to the Khāṣābiyya [q.v.] do not seem to have belonged to the Burdiyya.

During the reign of Sultan Kala'ūn (678-697) and that of his son al-Ashtar Khallīf (689/697-709/703), the participation of the Burdiyya in the affairs of the state was not very conspicuous. Immediately after Khalīf's murder, however, they are mentioned as the main body supporting amīr Sandjar al-Shudjāfī, while the main supporters of his rival, amīr Kitbughā, were the Wādiyya [q.v.] Tatars and the Shahrazuri Kurds. Kitbughā defeated Sandjar, ascended the throne after having deposed the boy-king al-Nasir Muḥammad b. Kala'ūn (694/1294) and retaliated against the Burdiyya by expelling part of them from the citadel and quartering them in different parts of the
BURDJIYYA — BURGAS

This was the first blow inflicted upon the regiment. Kitbûghâ, however, was soon deposed and replaced by Lâdjûn (696/1296) and the Burdjhâyâ recovered their former position. They became extremely powerful after having murdered Sultan Lâdjûn (698/1298) under the leadership of their commander Kurdi al-Mukaddam al-Burdjhâyâ. During the second reign of al-Nâṣîr Muhammad b. Qâlîn (698-708/1308) the leaders of the regiment gradually became de facto rulers of the Mamûlûk sultanate. In the struggle between the amīrs Baybars al-Diâshnâkir and Sallûr over the Mamûlûk throne, the Burdjhâyâ naturally were on the side of the first, who was one of their number, whereas the second was supported by the Shâlîhiyya (the remnants of the Bahriyya regiment created by al-Ṣâlih Naḍîm al-Dîn Ayyûb) and by the Zâhîriyya (the Mamûlûks of al-Zâhir Baybars). Baybars defeated Sallûr without difficulty and succeeded al-Nâṣîr Muhammad as sultan (708/1308).

Under al-Muâṣâfâr Baybars, the Burdjhâyâ reached the peak of their power, but their success was short-lived, for al-Nâṣîr Muhammad soon ascended the throne for the third time (709-741/1309-1340) and dislodged the Burdjhâyâ from their powerful position. As al-Nâṣîr subsequently ruled for more than thirty years without interruption, the Burdjhâyâ gradually degenerated, and after his reign they are hardly mentioned by the sources.

Orientalists usually call the first and second periods of Mamûlûk rule “the Bahri and Burdjh period”. This terminology is hardly ever used by the Mamûlûk sources, which call the early part of their reign they are hardly mentioned by the sources.

naival base for Balkan campaigns and as a ship-
building centre notably after the battle of Lepanto,
1571 (Uzunçarşılı, op. cit., ii. 230, iii. 21). An
Ottoman reform commission studying modern fortifi-
cations visited its castle in 1198/1784 (ibid., iv, 483)
and it was a Russian staging point in their advance
on Edirne in 1245/1829. The exiled Polish poet Adam
Mickiewicz resided there briefly in 1272/1855. Burgas
is also the name of one of the Prince’s islands
(ancient Antigone) off Istanbul (G. Schum-
berger, trs. N. Yungiil, Istanbul Adalarî, Istanbul
1937; Cuiinet, iv, 684-7; E. Mamboury, The Tourists’
Istanbul, Istanbul 1953) and of 10 villages in western
Turkey (Türkiye’de Meskun Yerlerle Klasavu, i-ii,
Ankara 1946-7, ii, 181), and appears in Arababurgaz,
Çatalburgaz and Lülburgaz, none of which is des-
cribed here.

BURGHUSH, Sp. Burgos, capital of the province
of the same name, in a valley on the banks of the
Arlanzón. It has 80,000 inhabitants and is one of the
most interesting towns of Spain because of the
monuments there which, show the importance of the
place in the Middle Ages, when it was known as
Caput Castellae. It was repeopled in 268/882 by Count
Diego Rodriguez and attacked in 308/920 by ʿAbd
al-Rahmān III, who destroyed it once more in
322/934, after having besieged Ramiro II at Osma.
As far back as 328/939-40 the famous Ffrrn González
was already count of Burgos and declared
himself independent of León. His borders stretched
to Castile, the Asturias de Santillana, Cerezo,
Lantarón, and Álava. At the close of the reign of
ʿAbd al-Rahmān III Burgos, like León and Pam-
plona, paid him tribute. In the middle of the 6th/
12th century Burgos was, according to Idrisī, a
large town with many markets and a lively trade,
a flourishing city. The river divided it into two
parts, each being bounded by ramparts; in one half
the majority of the population was Jewish. Among
its monuments is the celebrated Hospital del Rey,
contemporary with that liberally endowed by the
Almohad caliph Yaʿqūb al-Mansūr at Marrāqesh.

(A. HUICI MIRANDA)

BURGHŪTHIYYA take their name from
Muhammad b. ʿIsa the secretary, who was called
Burghūth (Ar. ʿfeet). They hived off from the Nadj-
dā’iryya (q.v.), holding with them that God has a
nature (māhiyya), that His attributes only tell what
He is (generous says that He is not stingy) and
He always knows what would happen. Peculiar to
the Burghūthiyya is the doctrine that God always
speaks from His self or essence, i.e., that speech is
action (fahu’ kalim ʿarḍī) whence it was concluded that the
Kūrān was not the word of God. He must not
be called “doer” or “creator” for both these
words can be used of man in a bad sense;
“you create a lie” (Sūra 29, 16/17). Secondary
acts (muwa‘lladāt) are the work of God
through the nature of things. God is empty space
and (at the same time) a body in which the (created)
things occur (Ibn ʿAbī Hadīd, i, 295).
Man is a combination of accidents, capacity (iddāh)
occurs together with part of the act and, if a
limb moves, the limbs at rest have some share in
causing the movement just as the moving one has
some share in keeping the others at rest. He who
“acquires” an act cannot be called the doer of it. If
Burghūth is the Muhammad b. ʿIsa of Maḥdāl 522,
he is important for the development of theology,
for he taught that God cannot compel a man to any
particular act, to become a believer or an unbeliever.
This does not conflict with his being called a ǧāibrī
for al-ʿAsharī, too, was so called.

BURGOS (see burgos)

AL-BURHĀN, “decisive proof”, “clear demonstra-
tion”. The term is Kūrānīc and signifies a
“brilliant manifestation”, a “shining light” come
from God (iv, 174), a “manifest proof” (xii, 24), which
may take the form of that supreme argument of
authority which is the miracle (xxviii, 32).
In correlation, burkān is also the decisive proof which
the infidels are called upon—in vain—to furnish as
justification of their false beliefs (ii, in; xxi, 24;
xviii, 75).
The first connotation of burkān is not properly
directive reasoning; it rather is the manifest
evidence of an irrefutable proof. But consequently,
It designates also the mode of argumentation, and
the argument itself which leads to that certitude.
Thus it can take on several meanings according to
the rules admitted in apodeictic demonstration
(baʿf).

1. In the initial development of fikh, burkān
refers to the quality of certitude which is proper,
especially in al-Shafiʿī, Ibn Ḥanbal and Dāwūd,
to reasoning (istiḍālāl) “in two terms”, from greater
to lesser or from lesser to greater, in order to prove
the radical distinction between or the identity of
two comparable “things” and to conclude: “certain-
ly”, “it is so” (inma, rather than anna). That is the
burkān inni. It is based upon an argument of authority,
which can be either a scriptural text or the
eye-witnessing of an obvious fact.
The form of argumentation (cf. Massignon,
Passion d’al-Ḥadīṣ, 578): reducing to the absurd
(biḥāl), exposing an effective comparison (muwa‘lāb),
indicating an internal contradiction (muḍāḥā),
establishing the obvious univocality of a term (lahkīb).
The certitude thus obtained is considered
more reliable than that obtained by rational investigation of motive or cause (illa).

2. The investigation of the "illa was, on the contrary, one of the characles of the Hanafi school, where the juridical argument took the form of a syllogism. In the logic of the falsafa, use of the 'illa became recourse to a universal mean term. Kiyds [q.v.], reasoning by analogy from the "sources of the law", was transformed into an Aristotelian syllogism, and burhdn came to designate syllogistic reasoning by analogy from the "victorious presence of the fact" (Massignon). But transposed into a logic of Aristotelian terms, the "decisive proof" of the reasoning in two terms becomes an inductive syllogism which states, as opposed to a syllogism of causal inference which explains. One may compare this analysis (although there is no complete identity) with the Aristotelian distinction between the knowledge of the reason (Posterior Analytics, 78a, 22-27). Ibn Sinä and after him al-Djurjani (Ta'rifi), emphasise that in every burhdn the mean term of the syllogism is the 'illa which connects the major to the minor premiss. If this mean term has an explanatory value and a causative scope in the actual nature of things, we have to do with the burhdn al-illa; if on the other hand it is only an affirmation of the mind which states a fact, without making explicit the raison d'être of the major premiss nor the inclusion in it of the minor, we are then dealing with a burhdn inni. If we keep the reading in, the passage could be interpreted: if such a fact exist, it follows that.

The later 'ilm al-kalim, which undertook to refute the falsafa but which was thoroughly influenced by it, lost sight of the testimonial evidence which the fact, as an argument of irrefutable authority, brought to the burhdn inni of the ancients. It took it to be the simple affirmation of existence of the quia, whilst the burhdn al-illa alone remained explanatory of premiss. In his commentary of al-Idji, al-Djurjani wrote: "The reasoning (istidâl) which moves from effect to cause is called burhdn inni; that which proceeds from cause to effect, is causal inference (ta'li) and burhdn lami".

Whether it refers to the extra-mental cause or not, whether it proceeds by lami or by innâ, burhdn thus becomes a syllogistic demonstration: to the extent to which Aristotelian logic, adopted by the later 'ilm al-kalim as well as by the falsafa, circumscribes in this sense the rules of human reasoning. But going back beyond the Kitâb al-Burhdn (Posterior Analytics), and primarily with reference to Ku'nânic terms, it still retains its original sense of "overwhelming proof", whatever way leads to certitude, discursive reasoning by a universal mean term, or testimonial proof by the argument from authority.

and the mention of his name in the Friday Prayer or khutba).

BURHAN AL-DIN GHARÎB, i.e., SHAHYK MU-
HAMMAD b. NÂŠIR AL-DIN MAHMÛD, sister's son of
Shahtây Dîmâl al-Dîn 'Ammûd Hansawî (for
him see Akhyâr 67) and one of the earliest and most
devoted disciples, and a hâlîqa of the shahtây
al-Islâm Nizâm al-Dîn of Delhi (d. 725/1325). He was
born in Hänî (East Pandîbî) in 654/1256 and died in
Dêğtîr (Dawlatbâd) on 11 'Sâfîr 738/8 Sept. 1337
(Nușka after Rawdat al-Asrâr),20 and other
others (e.g., Khatima) in 741/1340-1, and was buried at
Rawđa (Khuldâbâd). After spending his early years
in Hânî, he went to Delhi and studied jîhîk,
usîl, and 'arâbîyya [qq.v.], from the savants of his
time. He then attached himself to the shahtây
al-Islâm, and attended on him as long as the Shahtây
was alive (cf. Nușka 143, Sîyâr 279/15, Mir Hâsan,
Fawdî'îd al-Fawdîd, Lucknow 1908, 15, 33 (708 A.H.)
BURHAN AL-DIN GHARIB — BURHAN AL-DIN KUTB-I ALAM
1329

44 (709 A.H.), 84 (712 A.H.); Ulughkhanl, gafar al-Wdlih, Bib. Ind., 237; for the opposite view, that the Shaykh al-Islam sent him and others to (Burhànpur and) Deogir see Firishta, Safina, Mânduwil, Aghdur-Fi Abrdr (tr. of Guldur-Fi Abrdr), Agra 1326, 90, Ma'uddi, Khurda 322; contemporary authorities are silent as to the reason why he went to Deogir. There he spent the rest of his life doing almost pioneer work in the dissemination of Islam and the spreading of the culture of Islam in the Deccan (Safina), and trained a batch of distinguished adepts (Khutina 333) to follow up his work. One of these (Rukan al-Din) collected his obiter dicta in the Nafdr al-Anfus (nine of these quoted in the Ma'uddi 1326), while Rukan al-Din's two brothers and Hamid Kalandar also collected them (Nuzha, Aghdur-Fi 86).

He had a magnetic personality, and enjoyed great popularity in the circle of his Master—he was a dear friend of the poets Amir Khusrav, Mir Hasan, and Mas'ud Bak (who eulogises him in his works, especially in his Yusuf Zulaykhd), also of Shaykh Na'ir al-Din Girakh-i Dihlawi (d. 757/1357), Kirmanl etc. (Siyar al-Awliydr, 278 f.). He is described as an embodiment of longing and love, a man of asceticism, piety and ecstasy who charmed people by his heart-alluring discourses, an extremist in the matter of sama, who had a peculiar style of his own in the ecstatic derwish-dances, his fellow-dancers being overshadowed by him. Around his tomb there was a great crowd of people at the anniversary of Shaykh Burhan al-Din's death. Ddr Shukoh also visited it, and Awrangzib and two Nizam al-Mulks were buried near it (Kutb, ii, 549 = 572; Ma'dhir al-Umard, ii, 834).

Encyclopédie de l'Islam
Burhan al-Mulk, an otherwise good man, was ambitious to the extreme degree and his passion for self-aggrandisement did not spare even a person like Husayn 'Ali Khan, whose favourite and client he had been both as a Sayyid and a Shi'i. A disused canal in a part of the city of Delhi is still known after him as Nahr Sa'ādat Khān. It appears to be an extension of the Fayd Nahr, the main source of the water-supply of Delhi during the later Mughal period.

**BURHĀNPUR, town in Madhyā Pradēṣh (India) situated in 21° 18' N. and 76° 14' E., along the north bank of the Tapti, with bathing-steps (ghāts) on the river-side and a solid masonry wall, pierced by a number of massive gates and wickets, on all the other sides. This wall was constructed by Nīzām al-Mulk Ṣafādī lī Ḏhā 1 fg.v.) in 1141/1728, during his governorship of Burhānpur. The population in 1951 was 70,666. While the walled town occupies an area of 4½ sq. miles, numerous remains outside show that the suburbs, which now comprise Ādil-pūra, must have been very extensive.

This town, which was of great strategic importance
during the medieval period, was founded by Nasir Khan al-Faruki, founder of the Faruki dynasty of Khânâdâgh (renamed Dândêsh by Akbar after his son Mirzâ Dânîyâl, but the name never caught the popular fancy) in or about 801/1398-9 and named after the Deccan saint Burhân al-Dîn Gharîb [q.v.]. Another town on the other side of the Tâpti was also founded at the same time and called Zaynâbâbâd, after Shâykh Zayn al-Dîn Dâ'ûd al-Shirâzî, one of the khânâdâgh of Burhân al-Dîn Gharîb.

In 969/1561 Bûrhnâpûr was sacked by Fir Muhammad Shîrânî, a servant of Bayram Khân [q.v.], who massacred the inhabitants and carried off immense booty. It continued to be the capital of the Fâruki dynasty till its overthrow by Akbar in 1010/1601 when the kingdom was annexed to the Mughal empire, although the town itself had been occupied by the imperial forces under the command of Abu 'l-Fâdil 'Allâmî [q.v.], in 1008/1599. 'Abd al-Rahîm, khân-i khânân [q.v.] was appointed governor and stayed in Bûrhnâpûr for a very long period. It was here in Bûrhnâpûr that his eldest son, Mirzâ Îriq (entitled Shâhnâwâz Khan), died; his father built a tomb over his grave. Sir Thomas Roe, the English ambassador, had waited on Fârîwâz, Diårânî's eldest son, in this very town in 1023/1614. In 1025/1616 Shâhdjâhân, then prince Khurram, made it his general headquarters during his Deccan campaigns. Prince Fârîwâz died here in 1036/1626 and Arwândjâb accused his father Shâhdjâhân, after the latter's deposition, of having poisoned him. In 1040-2/1630-2 it again formed the base of Shâhdjâhân's military operations against the Deccan states when a great famine, resulting in an extremely heavy death-roll, devastated the town. In 1041/1631 the empress Mumtâz Mahall, consort of Shâhdjâhân, died here and was temporarily interred in Zaynâbâbâd, before the removal of her dead body to Agra for a permanent burial. In 1046/1636 Arwândjâb, then a youth of 18 years of age, was appointed governor of the Deccan, including Khânâdâgh, and he made Bûrhnâpûr his headquarters. It was during his viceroyalty of the Deccan that Arwândjâb came to know Shâykh Niẓâm Bûrhnâpûrî, who remained in his employment for nearly forty years and was subsequently appointed chairman of the board of 'ulamâ and jurists responsible for the compilation of al-Falâsîd al-Âlamgirîyya [q.v.]. It was again in 1092/1681 that Arwândjâb encamped at Bûrhnâpûr before investing Bidiapur [q.v.]. Soon after the emperor left the town in 1096/1685, it was sacked by the Mârâtâhs. There followed a series of battles in its neighbourhood, and peace could only be restored to the harassed town in 1132/1719 when the demand of the Mârâtâhs for levying the jâzâr (one fourth of the revenue) was formally conceded. In 1133/1720 when Niẓâm al-Mulk Âsâf Dîhî I was appointed to the government of the Deccan, he also made it his headquarters. After his return from Delhi in 1137/1724 till his death in 1161/1748 Bûrhnâpûr continued to remain an important outpost of the new principality which Âsâf Dîhî founded, and also served occasionally as his headquarters. After the death of Âsâf Dîhî I it was occupied by the Mârâtâhs, who were only dispossessed by Lord Wellesley in 1218/1803. It then changed hands several times and became finally a British possession in 1277/1860. In 1268/1850 it was the scene of a terrible Hindu-Muslim riot which claimed many lives. In 1268/1850 a great fire completely gutted Ghîndihpûra, a quarter of the town peopled mainly by the descendants of early migrants from various towns in Sind. Next year a large number of houses in Dâwûdpûra were gutted, while the third fire of 1314/1897 destroyed a part of Lohâr Mandî, including the mosque in the Cawk. In 1321/1903 bubonic plague took a very heavy toll of life. Bûrhnâpûr contains a large number of tombs and shrines of saints and mystics, many of them, from Sind and Gujârât, find mention in the Gulsâr-i Aâbrâr, whose author, Muâmmâd Gâhwîlî, visited Bûrhnâpûr frequently. Among other buildings of note are the tombs of Mubârak Shâh al-Fâruki and Râdžî 'Alî Khân entitled 'Adî Shâh al-Fâruki, the Khânâmî Masjîd, built by the latter in 997/1589, and the old fort, along the bank of the Tâpti, now in a state of utter disrepair. A caravanserai built by the khân-i khânân 'Abd al-Rahîm is still extant.

Diårânî's system of water-supply for the town, completed in the 11th/17th century by the Khân-i Khânân, compares favourably with any modern waterworks system. During the Mughal period Bûrhnâpûr housed a number of imperial factories which produced quality and expensive cloth for the royal household. The workers in these kârkhânas were mostly skilled weavers from Thatta (Sind), who had migrated to Bûrhnâpûr during the governorship of the khân-i khânân.

Bûrî b. AYYÛB [see ayyûbîs].
Bûrî TADJ b. AL-MULûK [see bûrîs].
Bûrî-BARS b. ALP ARSLAN, the Sâldjîk, was sent by Barkhîrûk against Arslân Ahrânî, another son of Alp Arslan, who was trying to make himself independent in Khurâsân. In the struggle between the two brothers, Bûrî-Bars was at first successful, but in the second encounter, in 1088/1095, his troops were scattered and he himself was taken prisoner and strangled by his brother's order.

BORâTAKIN — BûRIDS

BORâIDS, a dynasty of Turkish origin which reigned in Damascus from 497/1104 to 549/1154. Its founder was the alâbeq [q.v.] of Shams al-Mulk Dukâk, son of the Saljuqid sultan Tutush (see SALJUQIDS). This alâbeq, named Tughtakin and called Ẓahr al-Dîn, was the confidant of sultan Tutush, and was entrusted with the direction of affairs in Damascus as early as 488/1095 by Dukâk, whose mentor he had been. After the death of Dukâk (12 Ramaḍân 497/18 June 1104), Tughtakin continued to exercise power in the name of the deceased prince's young son, Tutush, who in turn died shortly after his father. From that moment, Tughtakin became the master of Damascus. His dynasty was founded, and it endured until the capture of Damascus by Âmir Nûr al-Dîn Zankî on 10 Saḥâb 549/25 April 1154. Tughtakin ruled until his death, 8 Saḥâb 522/11 February 1128. He was replaced by his son Tâdî al-Mulûk Bûrî, who died as a result of an attempt made against his life on 21 Râdhab 549/6 June 1132. Just before he expired he named as his successor his son Abu 'l-Ťafîl Ismâ'îll, called Shams al-Mulûk, who was himself assassinated by his slaves on 14 Râbî‘ 529/30 January 1135, by order of his own mother. His brother, Shihâb al-Dîn Maḥmûd, followed him, and was murdered by three of his servants on 23 Shawkâl 553/23 June 1139. His brother Dîmâlâl-Dîn Muhammâd, governor of Baḥbâk, was summoned to replace him, and died as the result of an illness 8 Shawkâl 554/29 March 1140. The military chiefs then raised to power the son of Dîmâlâl-Dîn, 'Abd al-Dawla ʿAbâb al-ʿAbâb, called Mudîlir al-Dîn, who left the responsibilities of administration to his alâbeq, Muʾîn al-Dîn Unûr, until the death of the latter on 23 Râbî‘ 544/30 August 1149. He then took the direction of affairs into his own hands, but was very soon obliged to accept the domination of the Zangid Nûr al-Dîn, by whom he was driven from Damascus in 1154.

During the fifty years that the dynasty lasted, the Bûrid rulers received their investiture from the caliph and from the sultan of Baghdaḏ, who, in exchange for considerable gifts, did not interfere in the internal affairs of the principality. Throughout this period, the Bûrid princes were confronted by situations which often were very difficult. When Tughtakin assumed authority, the territory of Damascus was in immediate proximity to the Frankish states of Antiqa, Tripoli, and Jerusalem. The Franks of Jerusalem menaced the regions from which Damascus clearly acquired its food provisions; that is, Ḥawrân and the plains of Upper Jordan and of Yarmûk. In order to avoid risking the entire loss of these indispensable territories, and to safeguard the communications of Damascus with Egypt and Arabia, the Bûrid princes were induced to negotiate with the Franks on several occasions, and even to conclude with them genuine treaties of alliance. They made them all the more easily since the treaties were not always looked upon with very much apprehension by their Muslim neighbours. Tughtakin did try to co-operate with the Egyptian garrisons, who still held some coastal positions, Tyre for example, but with little success or effect. On the other hand, the masters of Baghdaḏ were prejudiced by the tortuous politics of the Damascus rulers, so much so that the latter were repeatedly obliged to appear before the sultan and the caliph to justify their actions. Finally, from 524/1130, when the Zangid amir, ʿImâd al-Dîn and his son Nûr al-Dîn became masters of Aleppo, they grew progressively more threatening toward Damascus. With the exception of Shams al-Mulkûk, who was preparing to deliver the city to ʿImâd al-Dîn when he was assassinated, the Bûrid princes were therefore not displeased to find support in the Franks against the covetousness of the princes of Aleppo. However, the unprofitable attack by the Franks on Damascus during the second Crusade (July 1148) ended this policy and hastened the taking of Damascus by Nûr al-Dîn.

The internal situation of the city was no less troubled during the Bûrid epoch. The lower orders of the town, organised into a sometimes very turbulent militia (ahdâd), frequently participated in the political life of the city under the direction of those enterprising persons known by the term raʾîs. Over against the militia and actively opposing it, at least on one occasion, was a rural class. Led into action by the Ismâʿîlls [q.v.] or Bahārîyâs, this group also played an important rôle, particularly in 522/1128, with the complicity of some highly placed persons. It was not the first time that the Ismâʿîlls used Damascus as the arena of their activities; several political murders had been perpetrated there by them, notably that of Âmir Mawdûd the ruler of Maʿwshî, on 18 Râbî‘ 507/2 October, 1113. Âmir Tâdî al-Mulûk Bûrî was also their victim in 1134.

Until the end, or until just a little before the end, the Bûrid princes could count on the support of their Turkish troops whose loyalty was unfailling, and on the neutrality, growing steadily less benevolent, of the bourgeoisie. The latter were no longer opposed to the dynasty so long as it maintained order and assured, as best it could, the security of commercial transactions. But as the situation deteriorated after the death of Tâdî al-Mulûk Bûrî, the middle classes of Damascus showed themselves to be increasingly impressed by the prestige of Nûr al-Dîn, and facilitated his entrance into Damascus.

Thus, as long as the Bûrid dynasty was represented by men of ability such as Tughtakin and his son, it had no difficulty in retaining its power in Damascus; but the last twenty years, apart from the administration of Muʾîn al-Dîn Unûr, were characterised by sometimes bloody rivalries and by growing economic difficulties. Also the population of Damascus, principally the bourgeoisie, who had been whole-heartedly supported the Bûrids, no longer saw any reason for linking its destiny with that of the dynasty. The last prince, Muḍîlir al-Dîn, left the city amid indifference, if not hostility.

AL-BINN — BURSA

AL-BINN, AL-HASAN B. MUHAMMAD AL-DIMASHKI AL-SAFFURI BADR AL-DIN, an Arab historian and poet, born in the middle of Ramadan 959/July 1556, at Saffuriyya in Galilee, came when 10 years old with his father to Damascus, where he received his education at the Madrasa al-Salahiya. After the completion of his studies, which he had to interrupt in 974/1567 by a four years' stay in Jerusalem on account of famine, he lectured in various madrasas. In the year 1020/1611 he acted as Kadi to the Syrian pilgrim caravan. He died on the 13th Dhumad 1021/June 1615. His chief work is the collection of biographies entitled Taridjam al-A'yan min Abd al-Zaman, containing accounts of 205 individuals which he had collected at long intervals and completed in 1023/1614; it was edited by Faqi Allah b. Muhibb Allah in 1078/1667 and published with a supplement (cf. Ahlwardt, Verzeichnis der arab. Hss. . . . Berlin, no. 9889; Flügel, Die arab., pers. und lütt. Hss. . . . Wien, no. 1190; Fihrist al-Kutubkhane al-Khedivey, v. 33); his Dīwan is preserved in Istanbul (Köprülü, no. 1287). There are some of his poems in Berlin (Marāthi on the Soff Muhammad b. Abī 'l-Barākat al-Kadiri, s. Ahlwardt, op. cit. no. 7858, s); Goa (poetic epistle to As'ad b. Mu'in al-Din al-Tibrizi al-Dimashki, with the latter's reply, cf. Fertisch, Die arab. Hss. der herzogl. Bibl., no. 44, 23 and London [Catalogus Cod. Or. Mus. Brit., ii, no. 630, 2). Lastly he also wrote a commentary on the Dīwan of 'Umar b. al-Fārid, lith. Cairo 1279; he completed the commentary on the Tā'īyya al-Sughra in 1002/1593, cf. Derenbourg, Les MSS. Or. de l'Escorial no. 420, 4.

BURMA. Islam made its first major impact in the early 15th century through the King of Arakan, Narameikha. This monarch returned from exile in Bengal in 1430, accompanied by Muslim followers. He set up his capital at Mrohaung, where the Sandikan mosque was erected. Subsequent Arakanese kings, although Buddhists, used Muslim designations, and even issued medallions bearing the kalima. Muslim influence was intensified when Prince Shudja, brother of Alamgir, fled to Arakan in 1660. Shudja was murdered by King Sandakhtumma and his treasure sequestrated, but his followers were retained at court as Archers of the Guard, in which rôle they frequently intervened as kingmakers. Descendants of these Mughal courtiers remain distinctive to this day. Before the 19th century, Muslim presence in Burma proper was confined to small numbers of Gujjarāt traders and certain gunners and other foreign technicians conscripted into the service of the Kings of Ava. The British annexation of Arakan in 1826 led to an influx of Muslims from Cittagong into coastal towns, particularly Akyab. The annexation of Lower Burma (1852) was followed by large-scale Indian immigration from the 1880's onwards. The 1931 Census (the last to be completed in detail) gives a Muslim population of 584,839, out of a total of 14,667,146. Of the Muslims, 396,504 were of Indian origin; 1,474 were Chinese (Panthay); and 186,861 were indigenous, mainly Arakanese. Muslim Arakanese were among the early officials and police officers under the British; they took advantage of higher education and many were prominent in government service, banking, and business. Cittagongi Muslims supplied most of the crews of the coastal and river-steamers. Ismaʿīlls (Khodjas) and Gujjarāṭis dominated the retail trade. The 1930's were a decade of depression and some resentment was vented upon Muslims, conspicuous in the economy. Violent riots occurred in 1930 and '38; the latter lasted from July to December, and were fiercest in Rangoon and Mandalay; some 200 Muslims were killed. Following the Japanese invasion (1942) many Indians fled; numbers returned after the war, but they are less than before. The total Muslim population in 1958 is probably slightly higher than in 1931, perhaps 600,000 (the Census of 1953-4 is quite incomplete). About half are from India and Pakistan. A political organisation, the Burma Muslim Congress, was formed in 1945 and is affiliated to the Anti-Fascist People's Freedom League, the government coalition party. Two Muslims have been Cabinet Ministers during the greater period since independence: M. A. Rashid (b. 1912) a leading trade unionist and business man, and U Khin Maung Lat (Abd al-Laṭīf, b. 1913) a lawyer. The leaders of independent Burma, notably U Nu, lay great stress upon their Buddhist heritage; Muslims are accepted as equal citizens, but a number of irritants to good relations have existed. The Muḍjahids revolt in northern Arakan led by Kāsim, a fisherman, aimed at union of this area with Pakistan. The Muḍjahids terrorised the Buthidaung-Maungdaw area from 1948 to '54, but with the imprisonment of Kāsim in a Pakistan gaol their activities were greatly reduced. In September 1954, a national political creation was made by widespread monastic protests against Islamic teaching in state schools, but in general relations are harmonious. In Arakan, where Buddhists and Muslims are intermarried, many Muslim customs are followed by the Buddhists, even beef-eating. But in Lower Burma beef-eating and animal sacrifice at the 'Id are actively discouraged. The Burma Muslim Dissolution of Marriages Act, passed in March 1955, gave Muslim women equal rights to those of Buddhists: equal opportunity to divorce their husbands, and the right to retain their marriage portion on dissolution of the union. The act evoked Muslim protests outside Burma, but was accepted by the Burma Muslim Congress. Married Burmese Muslim women do not take the veil or observe purdah. In 1955, U Nu as Prime Minister initiated a project to translate the Kur'an into Burmese.

Bibliography: Census of India, 1931, xi (Burma), Rangoon 1933; H. Tinker, The Union of Burma, London 1957. (H. Tinker)

BURSA, also called BURSA by the Ottomans after the ancient city of Prusa (Pronoaea) on the northern foothills of Mysian Olympus, became the main capital of the Ottoman State between 735-805/1326-1402. It was mentioned by Pachymeres along with Nicaea and Philadelphia as one of the three principal cities still in the hands of the Byzantines when the Turkish borderers invaded the whole of western Anatolia about 699/1300.

According to 'Ashik Pashazade (ed. Fr. Giese, 22-23) the Ottomans were able to lay siege to Bursa for the first time when they invaded the Bursa plain after their victory over the Byzantine Tekfur (q.v.) of Bursa who, in alliance with the other Tekfurs had
attempted to stop the Ottomans at the pass of Dinboz, about 717/1308. This first siege failed. After blocking it for many years (cf. ʿĀshīk Pashazāde, 249-250; Ibn Battūta, Paris 1877, ii, 1; ʿĀshīk Pashazāde quoted by A. Wächter, Der Verfall des Griechenums in Kleinasien, Leipzig 1903, 55), the starved city had to surrender to the Ottomans (a Dījmādā I 726/1326), and to pay a heavy tribute (Pachymeres, loc. cit.; in Neshrī, ed. Taeschner, i, 39, 30,000 florin). The Byzantine commander was allowed to leave Bursa for Istanbul but his chief adviser, Šaroz (?) who was responsible for the surrender, remained with the new rulers (ʿĀshīk Pashazāde, 26; Neshrī, i, 39). The Greek metropolitan of Bursa continued to exercise his duty there under the Ottomans but his revenues diminished considerably (A. Wächter, loc. cit.). The Greeks were apparently removed from the castle to a district below it where we still find them in the Kādi records of the 15th century. The castle itself was settled by the Ottomans and the court. In 836/1432 B. de La Broquière (136) reported that the castle contained 1000 houses. Another description of it, in 1050/1640, is found in Ewliyā Celebī (Vol. ii, 9). Orkhan [q.v.] had his palace (Beg-sarayi) within its walls near the Byzantine church which had been converted into a mosque (Ibn Battūta, ii, 322). This locality overlooking the plain is called today Tophane. An inscription of 738/1337-38 found near it shows that he had also a mosque built there (A. Tewhid, Bursa da en eski kitâbe, in TOEM, v, 318-320). Orkhan made Bursa his capital and had his first silver coin, the akba, struck there in 727/1327 (Belleten, x, 207). In 740/1339-40 below the castle on the plain he built a group of public buildings inside its walls near the Byzantine church which had been converted into a mosque (Ibn Battūta, ii, 322). This locality overlooking the plain is called today Tophane. An inscription of 738/1337-38 found near it shows that he had also a mosque built there (A. Tewhid, Bursa da en eski kitâbe, in TOEM, v, 318-320). Orkhan made Bursa his capital and had his first silver coin, the akba, struck there in 727/1327 (Belleten, x, 207). In 740/1339-40 below the castle on the plain he built a mosque, an i̇maret, a bath and a caravanserai (Beg-khan). This group of public buildings became the centre of Ottoman Bursa and the place is still the most lively commercial centre in Bursa. New districts such as 'Alā al-Dīn-beg, Çobān-beg, Kodja Nābī, came into existence in this period, and towards 734/1333 Ibn Battūta (ibid.) described Bursa as 'a large and great city with attractive bazaars and large areas of open land'. During the subsequent reigns new religious and commercial centres with generous endowments were established by the Sultans and high officials in other parts of the locality. These became nuclei of the new districts of Bursa such as Yıldırım, Emir-sultan, Sultan-Mehmed (today Yeşil), and others. An idea can be obtained about the population growth of the city from the figures included in the Ottoman registers of the time for the years 734/1333 (Ibn Battūta, 322). This locality overlooking the plain is called today Tophane. An inscription of 738/1337-38 found near it shows that he had also a mosque built there (A. Tewhid, Bursa da en eski kitâbe, in TOEM, v, 318-320). Orkhan made Bursa his capital and had his first silver coin, the akba, struck there in 727/1327 (Belleten, x, 207). In 740/1339-40 below the castle on the plain he built a mosque, an i̇maret, a bath and a caravanserai (Beg-khan). This group of public buildings became the centre of Ottoman Bursa and the place is still the most lively commercial centre in Bursa. New districts such as 'Alā al-Dīn-beg, Çobān-beg, Kodja Nābī, came into existence in this period, and towards 734/1333 Ibn Battūta (ibid.) described Bursa as 'a large and great city with attractive bazaars and large areas of open land'. During the subsequent reigns new religious and commercial centres with generous endowments were established by the Sultans and high officials in other parts of the locality. These became nuclei of the new districts of Bursa such as Yıldırım, Emir-sultan, Sultan-Mehmed (today Yeşil) etc. A particularly great development of the city took place during the reign of Bayazīd I [q.v.]. Ulū-Dījāmī, the Great Mosque, was erected in 802/1399. J. Schiltberger, a contemporary eye-witness, says: 'The city contains two hundred thousand (7) houses and eight hospitals (i̇maret) where poor people are received whether they be Christians, infidels or Jews' (ed. Teller, 40). After Timūr's victory over Bayazīd I in 804/1402 a contingent of his army plundered and burned down Bursa. From that time on Adrianople (see Edirne) replaced Bursa as the principal capital (dār al-saltana) of the Ottoman state, though during the civil war (806-813/1402-1409) each party tried hard to gain control of Bursa as well as Adrianople. During the prosperous reign of Murād II [q.v.] who was enthroned in Bursa, the city made a quick recovery and greatly expanded. The new districts named after and endowed by Sultan Murād, Faḍl Allāh Pasha, Hādījī, ʿIbad Pasha, Hasan Pasha, Umūr Beg, Dībeʾ-All Beg, Şahāb al-Dīn Pasha and Rezkān were formed. In 836/1432 B. de La Broquière observed: 'Ceste ville de Bourse est bien bonne ville et bien marchande, et est la meilleure ville que
le Turc aye'. Before Mehemmed II [q.v.] made Istanbul his capital, Bursa had risen as a rival of it, and then many of the citizens of Bursa were ordered to migrate to the new capital. Bursa, however, benefited economically from the great expansion of the empire under this Sultan. Moreover he continued to use it as headquarters of his campaigns in the east. During the civil war after his death (886/1481) the people of Bursa took sides with Diem [q.v.] who maintained himself there as sultan for 18 days. He had coins struck there in his name and planned to rule at least over Anatolia with Bursa as his capital. The town continued to be considered one of the three capitals of the empire and the palace of Bursa was maintained and occasionally used by the Sultans as late as in the 11th/12th century (Pecėwi, ii, 313; Ewliyā Celebī, ii, 10).

An idea can be obtained about the population growth of the city from the figures included in the Ottoman registers of the time. The newly formed eyâlet of Khudawendīgīr or Beg in the eyâlet of Anadolu [q.v.] included the muṭasarriftlik of Bursa, Karabīšar, Kütahya, Bileğişik, Erdek, and Biga, and when in 1281/1864 a wilâyet of Khudawendīgīr was formed with the liwād of Karesi, Kütahya, Kōhān, Kōhān, Kūhān, Kütahya, Bursa became the seat of the liwād. It had in 1310/1892 a population of 76,000 of which 5,158 were Greeks, 7,541 Armenians, 2,548 Jews and the rest Muslims. There were 165 mosques, 57 schools, 27 madrasas, 7 i̇maret, 7 churches, 3 synagogues, 49 caravanserais, 36 factories (Khudawendigīr Wilâyeti Sâlimânesi for the year 1310/1892).

It can be said that Bursa had a greater economic than political significance in Ottoman history. It soon became an international market as it was, under the Ottomans, one of the closest of the Muslim centres to the Christian world. In fact Iranian silk caravans increasingly came to the Bursa market, partially abandoning earlier ones such as Trebizond and Aleppo. Already around 802/1400 it was, as can be understood from Schiltberger (34), one of the international centres of the silk trade and industry. The main silk route to Bursa passed through Tabriz, Erzurum and Tokat. Other important trade routes also converged in this city then. The ancient diagonal route Aleppo-Konya-Kütahya seems to regain its importance during this period. In 856/1452 B. de La Broquière (55-59) joined a Mecca caravan in Damascus which followed this route, and the spices it brought were sold to the Genoese merchants of Pera in Bursa.
The Damascus–Aleppo–Bursa route on the one hand and the sea route of Antalya–Alexandria on the other grew in importance during the 9th/15th century because of the active trade in spices, sugar, dyestuffs, soap and perfumes coming from Egypt and Syria to Bursa. Moreover, merchants from India used these routes to come to trade in Bursa. Thus for example about 885/1480 the agents of Maḥmūd Gāwān [g.v.] were importing Indian goods to Bursa. This trade must have been important enough for the Florentines about 874/1470 to hope to obtain their spices in the Bursa market. But it must be added that, because of higher prices in Bursa the spice trade there never developed to such a degree as to make it a competitor of the Egyptian markets. About 892/1487 the customs duties on dyes and pepper brought to Bursa amounted to 100 thousand akātas (about 2,500 Venetian ducats) yearly (Byzvekâyet Arşivi, Istanbul, tapu def. no. 23, muhādahati of Bursa). But Bursa remained the most important emporium of Eastern goods for Istanbul, the Balkans and even for Eastern Europe until the 11th/12th century.

The silk trade and industry in Bursa was the basis of its prosperity. Caravans from Tabriz brought to Bursa the precious silk of Gilān, Astarābdād and Sāfīr, and this was the subject of a very active trade there as the records of the kādūs of Bursa (preserved today in the Bursa Museum) and the Medici documents published by G. R. B. Richards (Florentine Merchants in the Age of the Medici, Cambridge, Mass. 1932) attest. The Genoese, Venetians and Florentines, who usually had their agents in Bursa, were in keen competition to buy as much silk as they could, and the usual practice in this trade was to exchange the silk for the woolen cloth which they imported. In 906/1501 Maringhi, an agent in Bursa for the Medici, estimated that one load (fardello) of silk made 70 to 80 ducats of profit. In the year of 884/1479 the total value of the silk imported there from Iran amounted to about 150 thousand Venetian ducats. Most of this silk was consumed by the local silk industry. In 907/1502 an official inspection showed that more than one thousand looms were active in this industry in Bursa (Bursa İhtisab Kanunu, ed. O. L. Barkan, Tarik Vesti, halari Dergisi, vii, 30). It was in private hands and had created there a prosperous Muslim bourgeoisie. The upper and middle class people constituted about 70 per cent of the population of Bursa in the second half of the 15th century (see İhtisāb Fakulteleri Meinuusun, Istanbul, xv, no. 1-4, 55-57). Workers in the silk industry were mostly slaves and after a time many of them were freed and became in turn entrepreneurs themselves. The ihtisāb [g.v.] regulations mentioned above describe in detail various groups engaged in this business and the processes by which different kinds of silks were manufactured. The precious brocades (kandīh) and gold velvets (muḍawbah ḥadīf) of Bursa were exported and much sought after in Europe, Egypt and Iran, but the main consumer was the Ottoman court (see T. Öz, Türk Kumaşlar, Istanbul 1946; R. Anhegger-H. Halıcı, Känämne-i Sültanim deb mürce-i 'Or-i Osmānî, Ankara 1956, 36). Light silks called vête and tāftha (taffeta) were produced in Bursa and exported in great quantities for wider use.

The considerable commercial activity of Bursa is further attested by many caravanserais (khāns) built in the 9th/15th century such as Ipek-khana under Mehmed I, Maḥmūd Pasha-khana under Mehmed II, and the larger khān called Kozha-khana and Pirinçekhānī under Bāyezid II. Bursa became also an entrepôt for the cotton textiles of western Anatolia, which were exported especially to Rumel and to Eastern Europe. The yearly tax revenue of the imported goods in Bursa amounted to about 140 thousand ducats in 892/1487 (Byzvekâyet Arşivi, tapu def. no. 23). The principal mint (see PARBÂNE) of copper and silver coins was located in Bursa, and this monopoly brought in a yearly revenue of 6,000 ducats at the same date.

Between 1007/1599 and 1037/1628 ʿAbbās the Great attempted to divert Persian silk from the Ottoman market (see Belleten, no. 60, 665), and this induced the Ottomans to encourage silk production in Bursa and its environs. In the 12th/18th century the production of good quality silk in Europe (Italy, France) and the competition of İzmir [g.v.] as a market of Eastern goods affected Bursa's former prosperity (P. Masson, Histoire du commerce français dans le Levant, Paris 1911, ii, 492). It, however, continued to produce Bursa silk cloth for internal consumption. In the 13th/19th century this local market too was invaded by cheap cotton and silk products from Europe. In 1262/1846 D. Sandison, the British Consul in Bursa, wrote that "Bursa silk and cotton stuffs were always falling in disuse" (Public Record Office, F.O. 78,701). British, German and Swiss imitations of the Bursa silks and cottons were in great demand in Bursa itself. But, in 1253/1837, Bursa was saved from becoming a mere producer of raw silk for Western countries by the introduction of steam power in the local industry. Filatures were 35 in number twenty five years later and the production of raw silk reached one thousand tons by 1332-1914. This development was greatly affected at the time of war of independence (1337-1341/1921-1922). But under the protectionist policy of the Turkish Republic a partial recovery was achieved in silk production (140 tons of raw silk in 1958). On the other hand Bursa textile industry made tremendous progress because artificial silk now provided the raw material (6,000 power looms in 1938). Moreover the establishment of a large woolen factory in 1938 emphasised the industrial character of the city. Its population almost doubled from 77,000 in 1940 to 131,000 in 1955.

BURSA — BURSUK

1336

BURSA (Eastern Turkish = “badger”), one of the local officers of the Great Saljūq, whose descendants also played a notable role at the beginning of the 6th/12th century. Bursuk, although youthful, entered history as one of the principal amirs in the service of Ṭūghrīl-Beg, who after restoring control in Baghdād following the tragedies of the years 450/1058-59, made Bursuk his first ğiına (military commander) in Baghdād. However, under the pacified Saljūqī organisation, the essential power belonged to the ‘amīd, the civil administrator, and it is not certain that there had been a ğiına with any permanence in Baghdād for a dozen years. In any case, Bursuk did not remain in the position since we find him in 455/1063 as hādīgī of the sultan who had accompanied (Ṣīhī Ibn al-Djawzī, Mir‘īd al-Zanīn, Bib. Nat., Paris, Arab. 1506, 87v); then, in 456/1064, he was charged by the new sultan, Ṭup Arslān, to go and extract from a vassal a reprise of tribute (ibid., 99v, 100v). Then, without our being able to explain the reason, silence ensambles him for 15 years. We discover him again only around 471/1078, under Malikshāh, sent to Anatolia against the Saljūqī rebel sons of Kutlmūgh, one of whom, Mansūr, he killed but without being able to crush the other, Sulaymān (Bar Hebræus, Chronography, trans. Budé, 227). In 479/1086, together with Būzān, he led the advanced guard of Malikshāh’s army, which on the death of Sulaymān occupied Aleppo; and probably from there was dispatched to Asia Minor to combat the heir of Sulaymān at Nicaea who, despite the efforts of the sultan, was supported by Alexius Comnenus, the Byzantine Emperor (Anna Comnena, Alexiad, Bonn ed., 302-11). It was probably on this occasion that he obtained from Constantineople the tribute of 300,000 dinārs about which Bundar speaks (ed. Houtsma, 70). A little later Bursuk organised the celebrations in Baghdād honouring the marriage of the caliph to a daughter of Malikshāh. Following the death of the sultan, in the quarrels among the latter’s heirs he took the part of Barkyarūk, particularly in the resistance to Tutūq, and followed his prince to Isfahān, there falling victim to the Assassins. His sons avenged him by participating two years later (490/1091) in the execution of the Shī‘ī mustawfi of Barkyarūk, Majdī al-Mulk al-Balāsānī, whom they suspected of having been the instigator of the murder of Bursuk and of others as well.

The sons of Bursuk—Zenghl, ʿAbdūr, ʿIlbeki, and Bursuk—appear, generally speaking, as a close-knit family group, which remained attached to Barkyarūk as long as he lived, but which was more normally established on their ichtā of the province of Ahwāz, which, with Tustar, foremost town of the province, were acknowledged to be hereditary, either legally or by fact of possession. Bursuk assisted Barkyarūk in recapturing Cappadocia from his brother Muhammad. Probably it was for this reason, when in 498/1005 Muhammad succeeded Barkyarūk who had died, that we find Zenghl incarcerated by the new sultan. But the family found a way to reconcile itself with Muhammad by refusing to follow the rebel Mangubār and by betraying him to the sultan. Zenghl, who would have been put to death, was set free, and although the sultan demanded from the Banū Bursuk the return of their ichtā, in exchange he conceded to them Dinawar. Furthermore, even this exchange appears to have been provisional; for we find the Banū Bursuk subsequently once more in possession of Tustar. Meanwhile, Bursuk (the son of Bursuk) was made by Muhammad governor of the province of Hamadān, one of the capitals of the Empire (ibn al-Kalānī, ed. Amedroz, 174).
Firmly installed in power, Sultan Muhammad sought to organise war against the Franks in Syria. Bursuk b. Bursuq was one of the principal participants of the expedition of 509/1115, which miscarried because of quarrels among the chiefs and the jealousies of the Syrian princes toward the “Easterners”; moreover, he was ill almost the whole time. But he received command of the expedition of 509/1115. Again the circumstances were difficult, Iğhâzî, the principal chief of the Diyâr Bakr Turkomâns, Tughîkîn of Damascus, and Lu’î’un, regent of Aleppo, having made an alliance with the Franks against him. With such bases as Hims, where the prince was his friend, and Hamâ, which he conquered, Bursuq attempted to dislodge the coalition army. He succeeded only on making contact, withdrawing, returning, and finally being overrun at Dânhîl, to the east of the Orontes, by Roger, Prince of Antioch. He was preparing to take his revenge when he died, as did his brother Zenghi, in 530/1136. This death and that of Sultan Muhammad two years later, meant the end of political intervention by the Sultanate against the Franks.

It is only on the occasion of the dissensions among the Saljûqids that the last heirs of Bursuq are heard of again, re-established in Kûhîzîstân. Akbûrî and some of the sons of Zenghi and Ikhbeî figured in the army employed by Sultan Mahmûd against his uncle Sandjâr, and Bursuq b. Bursuq participated in the complicated quarrels of Lower ʿTrâk. At the death of Mahmûd, the brothers Tughîrî and Bursuq were found in the party of Tughîrî who protected Sandjâr; then, when he (Tughîrî) died, they joined the party of Dâhdî, who had the support of the Caliph. Nevertheless, they were able in time to reconcile themselves with the conqueror Mas’îd (533/1139–1140). We cannot say whether it was one of these two whose death, under the name of Hamza b. Bursuq, is mentioned by Ibn Abî Taâyîl (cited by Ibn al-Furat, NS. Vienna II, 1157°), as lord of Tustar in 533/1139. In any case, it appears this is the last mention of a member of the family whose heirs are no longer encountered among the vassals of the subsequent masters of Kûhîzîstân.

It was as an officer of the first Bursuq that Abû Sunkar al-Bursuqî [q.v.] began his career. Bibliography: In addition to the references given in the article: Ibn al-Āṯîr, Kâmil, x, xi, Index; Ṭîmâd al-Dîn al-Isfahânî in Bundârî’s version (Houtsma, Recueil, ii, index); RâwANDî, Râhât al-Ṣâdîr, ed. Muḥ. Ikhbâl, index. For the Syrian campaigns, the sources are elaborated in Cl. Cahen, La Syrie du Nord etc., 271–3, 271–4; cf. also Grousset, Histoire des Croisades, i, 463 ff., and 1495 ff. (Cl. Cahen)

AL-BURSUQî [see AK SUNKUK]

AL-BURT, pl. al-Burtât, a Spanish-Arabism derived from the Latin portus, the meaning of which the Arab authors explain as the equivalent of Arabic bûbî, pl. abûnî. The triangular shape which the Arabs gave to the Iberian peninsula is well known. Following Ptolemy, they fixed its points at Tarin in the south, at Cape Finisterre in the west, and in the east in the Narbonne area according to some, or the valley of the Llobregat according to others, or at Port-Vendres (Portus Veneris/Haykal al-Zuhara) according to a third group. The disagreement over the fixing of the third point arises from two causes, to which nobody has given the attention they deserve. In the first place, the Arab geographers of the Middle Ages had no clear idea of the Pyrenees, nor did they give a definite name to them; in the second place, they show the north-east frontier in ways which differ markedly according to the ideas of the times in which they lived and the political situation of the region.

Some, the earliest, such as al-Râzî and after him Ibn Ḥâyîn and al-Yasaî, follow the Visigothic tradition and take the limits of the peninsula, as in Wamba’s time, to the Narbonne area. Others, coming later, such as al-Bakrî, who knew of the Frankish conquest of the Spanish marches, and had travelled through the country several times by land and sea, on hearing the Catalans of Barcelona and the Pyrenean countries called Franks and taken for such, place the north-east limit on the line of the Llobregat; on this frontier al-Bakrî mentions al-Burt (the Gate) in the Catalan coastal range; and in order to leave no room for doubt that the frontier between al-Andalus and the continent (al-arḍ al-habîra) stands on that river whose Latin name (Rubricatus) he knew, he states that the gates (abûnî) of the Djabal al-Burt face the islands of Majorca and Minorca. This testimony is confirmed by Ibn Sa’îd, and al-ʿAbdārîkâr accepts it as the most accurate since it is corroborated by many travellers. Ibn al-ʿAbbâr mentions more than once the famous battle during which the Almoravid amir Ibn ʿAbî Thââsî died and calls it mabkât al-Burt (Christian sources refer to it as the battle of El Conquistador de Mallorca) and Ibn Khâlîdân mentions the embassy which the Frankish count of Barcelona who was living on the other side of al-Burt sent to ʿAbd al-Rahmân III. Al-Idrîsî, on his part, who was writing in the second half of the 6th/12th century, and witnessed the independence of the Catalan-Aragonese kingdom, takes care not to call the Catalans Franks and puts the frontier of Spain at Port Vendres; in enumerating the 26 provinces or iklims of Andalusia he puts Tortosa, Tarragona, and Barcelona in the iklim of al-Burt, further south than the Pyrenees, appearing to show that this Djabal al-Burt or al-Burtât was the centre of the iklim.

(A. Huici Miranda)

BURTAS, or BURDAS (in al-Bakrî Furdâs), pagan tribe of the Volga basin. For an account of the Burtas and their neighbours the Khazars and the Bulghârs, to the north and south, see BULGHAR. Al-Mas’dî (Murûdî, ii, 14 & Tanbî, 62) lists Burtas also as a river flowing into the Itil (Volga); Marquart identifies this stream with Samara (Streifziige, 336). The sources do not mention any adherents to Islam among the Burtas, which contrasts with their accounts of the Khazars and Bulghârs. Yâkût’s report on the Burtas (i, 567) is based on a misunderstanding, as he applied Ḥāṣîrî’s remarks on the Bulghârs (225) to the Burtas. The sources in which they are mentioned, Ibn Rusta (140 ff.), al-Bakrî (Kunîk & Rosen, Iwritsiyya al-Bekî, etc., i, 44) and Gardîzî, (Barthold, Olot o poyezdirki v Srednyuyu Asiyu, 96 ff.) content themselves with saying on the subject of the Burtas religion that they adhere to the same beliefs as the Ġuzz (Turks) and that some of them burn while others bury their dead. They allowed themselves to be outdistanced by their neighbours more in contact with civilization. They lacked government authority, the direction of affairs
being entrusted to the elders of each tribe. The only commercial dealings of any importance between the Muslim World and the Burtas was the traffic in furs—the ḫirā' mentioned by Yākūt (loc. cit.).

The majority of authorities (V. V. Holmsted, A. P. Smirnov, P. D. Stepanov) identify the Burtas with the Finnish Mordve-Moksha (the “Moksel” of Rubruquis), clans which at the beginning of the Middle Ages inhabited the area between the upper basins of the rivers Khooper and Medveditza and the right branch of the Volga, extending so far northwards until the Finns were the immediate neighbours of the Slavs. Others (A. I. Popov, A. E. Alikhova) locate their place of origin in the northern Caucasian steppes and argue that the Burtas emigrated northwards only at the time of the Golden Horde; others again (Sboev, Rittich) place them among the ancestors of the Čuwaš. Tokarev believes that the Burtas were a Finnish tribe more or less Turkicised, and which finally was assimilated partly by the Mordve-Moksha and partly by the Čuwaš.

Russian chroniclers from the 11th century onwards mention the Burtas as vassals of the Golden Horde. After the downfall of Kazan, their land was conquered and colonised by the Russians in the 16th century. At the beginning of the 18th one reads of insurrections among them but from that time the name Burtas ceases to figure in Russian documents.

The present Mordve (Mordva in Russian) are divided into two distinct groups: the Moksha and the Erzia, numbering about 1,450,000 souls (Soviet census 1939), living in an autonomous Soviet Socialist Republic (Autonomous SSR of the Mordve, capital Saransk). A large number of the Mordve, however, live outside their republic, notably in Tatarstan, Bashkiria and Siberia.

The Mordves were subject to strong Russian cultural influences, and from the 17th century adopted the Orthodox faith. One must, however, mention the existence of another Mordve-Moksha group living in the Tartar region (in the district of Kamsko-Ustinsk of the autonomous SSR of Tatarstan)—the Karatai. These from the 17th century have been subjected to Tatar influence and adopted the Orthodox faith. One must, however, mention the existence of another Mordve-Moksha group living in the Tartar region (in the district of Kamsko-Ustinsk of the autonomous SSR of Tatarstan)—the Karatai. These from the 17th century have been subjected to Tatar influence and from about 750 onwards, the withdrawal owing to famine of large numbers of the new inhabitants of the NW. (mostly Berbers) provided conditions for the beginning of the Reconquista. Alfonso I of Asturias (739-757) or, according to Ibn Hayyān (Maḳṣarī, Naṭḥ, i, 213), his son Frueila I (757-768) made himself master of the north of modern Portugal, including the towns of Oporto and Braga north of the Douro and Viseu south of the same river. Another son of Alfonso, Aurelio (reigned 768-774), is given by Ibn al-Khaṭṭāb (ʾA‘māl al-A‘lām, 373) as conqueror of 'ard Burtukāl. Alfonso II (791-842) is said to have taken Lisbon in 828/798 and to have sent a message to Aix-la-Chapelle announcing the news to Charlemagne. But these successes, if authentic, were transitory. It was not till the time of Alfonso III that the line of the Douro was more or less effectively held by the Christians, after the definitive capture of Oporto in 868.

Kulumriyya (Coimbra) fell in 357/987 but was retaken in 575/985 by al-Mansūr, whose extraordinary march from Cordova to Shānt Yaḵtūb (Santiago de Compostela) was directed via Coria and Viseu. Al-Ughbūna (Lisbon), which still belonged to the expiring Caliphate of Córdoba, was retaken in 375/985 by al-Mansūr, whose extradosed, iii, 201-202, and see below).

Al-Ughbūna (Lisbon), which still belonged to the expiring Caliphate of Córdoba, was retaken in 375/985 by al-Mansūr, whose extradosed, iii, 201-202, and see below).
speaking Christians encountered by al-Mu'taḍad of Seville on an expedition into Portugal circa 1020 at Bihayn al-Khawān, now represented by Alafenes or Alafenes (Platae) of Viseu, who claimed to hold their land by treaty from Mūsā b. Nuṣayr (cf. above) and, though doubtless Moazzars, alleged their descent from Djabala b. Ayyam, a Christian Arab of Syria contemporary with Muḥammad (Fernandez y Gonzalez, ibid., cf. Dozy, Loc. de Abbadadis, ii, 7).

Under the Caliphate several kāras (i.e., provincial districts with chief town, governor and garrison, see jur. al-Andalus, 2, iii) belonged in whole or in part to the territory of modern Portugal. 1. In the extreme S, corresponding to the present-day province of Algarve, was the kāra of Ukhsinuba (Ocsonoba), so called from the ancient town of that name, inland from modern Faro. The town declined in importance after the Arab invasion and gave way to Shīb (Silves) as provincial capital, but was still in existence in the 5th/11th century (Ibn 'Iṣḥāq, iii, 215). Silves was situated more to the W. near the estuary of two small rivers, is first mentioned as a port at the time of the descent of the Norsemen in 229/844 (cf. al-Bahr al-Muḥīṭ), and grew to be a flourishing city, especially perhaps after the fall of the Caliphate under the 'Abbadids of Seville. Other towns or large villages in the province were, according to Ibn Sa'id (al-Mughrib fi Hulāl y-Maghrib, Dhakhdhak al-Arāb, x, Cairo 1953-1955, 1, 380 f.), Shannahūs or Shannarūs (Shannahūs for São Brás), Ramāda, Shantamariyya (Santa Maria de Algarve, now Faro), al-Ulāy (Loulé) and Kastalla (Cacela). Al-Idrīsī (circa 1154) in his description of Silves mentions that the inhabitants of its villages, as well as its townspeople, spoke pure Arabic. 2. Immediately N. of Ukhsinuba, i.e., corresponding to modern Baixo Alentejo, was the kāra of Bādja (Beja), with principal town of the same name (cf. Beja). This province, according to Ibn Sa'id, included Mārtula (Mertola), which is placed by Ibn al-Khaṭīb (A'mādī, 287) in the kāra of Shadhūnū (Sidonia). 3. Further N. lay the kāra of al-Usba'ūna or Lisbon (Maḳkāri, Nāḥi, i, 90), which included Shantaran (Santarem), Shantara (Cascais) and al-Kibbahā or al-Kabdjah (cf. al-Kabdjh or Acanet! between Cordova and Granada). Other kāras in Portugal are not named. Yābura (Evora) N. of Beja is included by Ibn Sa'id in the kingdom of Badajoz, and perhaps in Caliphal times formed part of a kāra of Mārida or Merida (cf. Maḳkāri, Nāḥi, i, 103). While it still belonged to Islam before 264/878 Kārumriyya (Coimbra) may have been the centre of a kāra (cf. L. P. 'Provençal, Esp. Mus., iii, 51).

Like other outlying parts of al-Andalus, Muslim Portugal affords plenty of examples of particularism throughout its history. Partially successful attempts to assert independence of Cordova were made in the 3rd/9th century by ʿAbd al-Rahmān b. Marwān, often called Ibn al-Dīlijī (son of the Galician) and his descendants, operating widely from Badajoz, and by the Banū Bakr at Santa Maria de Algarve in the same century. Much later a militant religious movement in the W. headed by Ibn Kast, who revolted at Mertola in 539/1144, contributed to the downfall of the Almoravids. Ibn Kast became master of Silves, and he and his contemporary Ibn Wazr were perhaps the only Muslims to coin money on Portuguese soil.

The last period of the struggle in Portugal between Christians and Muslims was marked by a great though unsuccessful effort of the Almohad Abū Yaḥyūb Yusuf in 580/1184. The Almohad fleet, it seems, failed before Lisbon, and the main land assault on Santarem had to be abandoned. In a Portuguese attack on the sākh or rearguard of the Almohads Abū Yaḥyūb received a wound from which he died near Evora on the march back to Seville.

The set-back in Portugal was contrary to general expectation, for at this time Almohad power and prestige stood high. In 1189, the year in which it first fell into Portuguese hands, Silves was described by an anonymous Crusader (Anonymous of Turin) as much stronger than Christian Lisbon and ten times as rich. After the victory of the Christians at al-Iṣkāb (Las Navas de Tolosa) in 609/1212, in which Portuguese forces took part, the issue of the prolonged struggle came within sight. Silves fell finally in 1249 and the Muslims lost Algarve, their last holding in the territory of modern Portugal.

At a battle fought near Tarifa on the Río Salado in 741/1340 the Portuguese under their king, Alfonso IV of Portugal, joined forces with the Castilians to oppose the African troops of the Marinid ruler of Fās, Abu 'l-Ḥasan 'All and the contingents of Yusuf I, Sultan of Granada. Ibn al-Khaṭīb describes how the Andalusians almost broke the ranks of the Portuguese at the first charge, but their valour was in vain and the day was lost (A'mādī, 386). Henceforward there was no hope of restoring Muslim rule in the West of al-Andalus.

The principal towns of Muslim Portugal produced a respectable number of literary men, whose names are given in the Arabic biographical works. Among the best known are the historian Ibn Bassām, Abu 'l-Walīd al-Bāḍī (cf. A-baḍī), Ibn 'Ammār, the poet and friend of Muḥamūd b. 'Abbād, and Ibn Kast, already mentioned, author of the Muḥ-loss al-Na'la'īn fi 'l-Taṣawwuf and other works.

Some itineraries in roth century Portugal are given by al-Iṣṭakhrī (BGA, i, 46) and Ibn Hawkal (ed. Kramers, i, 116-117).

AL-BURUDJIR [see NUDUM].
BURLAIRD [see BURGLIR].
BURUCLUS, i.e., Procullus (A.D. 410-485), head of the pagan philosophical school at Athens (the *Platonic Academy*), outstanding scholastic...
systematiser of Neoplatonic thought' and one of the chief links between ancient and medieval philosophy. Although it would be premature to attempt a monograph about the influence he exercised upon medieval Arabic thought, the information at present at our disposal is not so scanty that its complete neglect in R. Butler's comprehensive article on Proclus (Pauy-Wissowa-Kroll 45, 1957, col. 186 ff.) appears justified. Better information is available in E. Zeller, Philosophie der Griechen III 2', 839 n. 1 and E. R. Dodds, Proclus The Elements of Theology, Oxford 1933, xxviii f.

A list of those works by Burullus which in some way became known to Arabic scholars is to be found in Ibn al-Nadīm, Fihrist, 252 Flügel (=333 Egypt, ed.); it was reproduced, with a few omissions, by Ibn al-Kīfī, Ta'īrīh al-Ḥuhāmād, 89, (ed. Lippert).

1. Some works by Burullus appear in Arabic under very inappropriate false names.
   a. The work referred to by the bibliographers as Kītāb al-Ṭalāhīyāt and ascribed by Ḥādīḍī al-Ṭhāfī, v, 66 (Flügel) to Proclus and (!) Alexander appears to have been the systematic manual of Neoplatonic metaphysics known as Elements of Theology (Στοιχεῖα τῆς Θεολογίας). The Arabic text of propositions 15-17 (16-20 Dodds) has been published by A. Badawi, Arisū'un ārā' al-ʿArab, Cairo 1947, 391 f. from a 11th century Damascus MS, where it is wrongly attributed to Alexander of Aphrodisias. The truth was discovered independently by B. Lewin (Orientalia Suecana 1955, 101 ff.) and S. Pines (Orients 8, 1955, 195 ff.). The translator was Abā Uḥmān Saʿd b. Yaʿqūb al-Dīnāshī, a minor member of the school of Ḥunayn.
   b. A work K. al-Ṭāhā fī iʿlāhīyyah al-Makhlāf, based on 33 propositions of the Elements of Theology, is known in the West since the days of Gerard of Cremona (second half of s. xii) as Aristotle's Liber de causis. A critical edition of the Arabic text (which ought to be based on the Latin and Hebrew versions and be minutely compared with the Greek) is being prepared by G. C. Anawati (cf. B. Lewin, Melanges A. Dies, 8, 1955, 195 ff). The translator was Abī Uḥmān Saʿdī b. Yaʿqūb al-Dīnāshī, a minor member of the school of Ḥunayn.

2. Proclus himself is mainly familiar to Arabic thinkers as proclaiming the eternity of the world. His 18 propositions about this tenet (Ἐν παρώνιῳ πάντων ἐξής τούτου καὶ ἑλθεῖν), which are lost in the Greek original, were as well known to the Arabs as John Philoponus' reputation (De aeternitate mundi contra Proclus)—of which the Greek MSS. lack the beginning. The first nine propositions are now published by Iṣḥāq b. Ḥunayn's Arabic version by A. Badawi (op. cit., 35 ff.); eight of them were known from John Philoponus' quotations but the first is preserved in Arabic only (cf. C. G. Anawati, Mélanges A. Diès, Paris 1956, 21 ff.). Muhammad Ibn Zakāriyyā al-Rāzī in his book "On doubts which arise against Proclus" (K. al-Ṣukūk al-ʿālāt ʿalā Burāqīs) referred to this work (cf. S. Pines, Beiträge zur islamischen Atonlehre, Berlin 1936, 93 n. t)—he may have made use of John Philoponus—and so does, for instance, Al-Shāhriṣūṭī (K. al-Mīlād wa-l-Nihāl, 338 ff. Cureton), who rightly points to Ibn Sinā's use of Proclus' arguments; Al-Ghazzālī was familiar with them as well (cf. S. van den Bergh, Averroes' Tahāfuṭ al-Tahāfuṭ, London 1954, i, xvii; ii, 1).

b. Additional proof for the popularity of Proclus among Arabic philosophers is provided by the chance discovery of fragments of some other writings. There are eight Προβληματα φωστικά evidently part of a larger treatise which may well be genuine, published by A. Badawi (op. cit., 43 ff., cf. B. Lewin, Orientalia Suecana 6, 1958) and a small fragment about the concept of ἄγαθον from the Lesser Στοιχεῖα τῆς Θεολογίας, mentioned by the Arabic bibliographers (Badawi, op. cit., 257). F. Rosenthal made known, in English translation, a passage from his work On the immortality of the Soul according to Plato, and a small section of the lost part of his huge commentary on the Timaeus is available in German [see article Ἡφαίστης]. The Arabs knew of his commentaries on the myth of the Gorgias and on Plato's Phaedo but neither Syrian nor Arabic remains of them have hitherto been traced. A commentary on the pseudo-pythagorean Golden Verses is a misattribution, due to the misreading of B. for the less known Neoplatonist Hierokles (which can be easily explained).

(R. Walker)
ever, have been battles following the landing of the Byzantines in 53/673.

The inhabitants of Burullus had the reputation of being expert trackers.

**AL-BURZULI, ʿABU ʿL-KASIM B. AHMAD B. MUḤammad, of the tribe of the Banū Bīrzāla, a Mālikī author.** Born in al-Kayrawān, he studied under Ibn ʿAraba for thirty or forty years and under other great masters, and became himself a teacher of Islamic law in Tunis and an imām at the Zaytūna mosque. In 806/1403, he passed on the pilgrimage through Cairo, where he issued several iḥāṣas. He died in Tunis in 841/1438 (according to others, in 842 or 843 or 843), at the age, it is said, of 103 years. He is famous on account of his collection of fatwās and handbook entitled Dīwān Maṣdūl al-ʿĀkham min maqāmul al-Kadīyil bin Muṭṭin waʾl-Ḥubbām, in two volumes, numerous manuscripts of which are known; it is one of the main sources of the Miṣʿar of al-Wansharīšī (d. 914/1508); two extracts were made from it in the 9th and in the 12th century. The innumerable responsa which al-Burzuli mentions there together with the names of their authors, famous jurists who can easily be situated in space and in time, make his work the most important source for the history of society in Irīkīya under the źirids of al-Ḵayrawān and al-Mahdīyya (10th-12th cent.) and the Ḥaṣīds (13th-14th cent.).

Provenzali, Algiers 1910, 164-7, index 588; Brooke, the name of Bandar Nādīrīyya (see the Gombroon Diary of the English East India Company, 3rd/4th July 1734, in vol. iv of the Persia and the Persian Gulf Records, India Office Library, and L. Lockhart, Nādīr Shāh, London 1938, 92-3). Subsequently, an unsuccessful attempt was made to build a large warship at Būghār, using timber that had been brought overland from the forests of Māzandarān at a vast expenditure of labour. Sir W. Ouseley saw the remains of this vessel when he landed at Būghār in 1811 (see his Travels in Various Countries of the East, more particularly Persia, London 1819, Vol. i, 188). Although this shipbuilding experiment failed, Būghār prospered in consequence of the attention that Nādīr Shāh gave to it. Moreover, it subsequently benefited commercially when the English and Dutch East India Companies transferred their factories there from Bandar ʿAbbās [q.v.]. Another factor of great importance in the development of Būghār in those times was the fact that Shīrāz, with which it was connected by a caravan route, became the capital of Persia in the reign of Karīm Khān Zand [q.v.]. The consequence was that Būghār took the place of Bandar ʿAbbās as the chief port of the country, a position which it was destined to hold for over a century and a half. Abraham Parsons, who visited Būghār in 1775, stated that, when approached from the sea, the harbor was so large that the land itself came into view. So shallow was the sea there that large vessels had to anchor some 3 miles off shore. He estimated the population in normal times at nearly 20,000, but when he was there two-thirds of the inhabitants were absent at the siege of Baṣra [q.v.]. See his Travels in Asia and Africa, London 1808, 187-8.

In the 19th century Būghār easily maintained its supreme position as a port. During the brief Anglo-Persian war, British forces occupied the town in December 1856, and held it until the conclusion of peace in the following March. The British connexion with Būghār, at first only commercial, but later also political (for it became the headquarters of the Political Resident in the Persian Gulf), increased in importance as time went on. Other nations too participated in the trade of the town. Particulars of this trade and also of the movement of vessels in the latter part of the 19th century are to be found in the Administration Reports of the British Resident from 1876 onwards; these reports were published in Calcutta in Selections from the Records of the Government of India, Foreign Department (the tables covering the years 1893 to 1897 in Freiherr M. von Oppenheim’s Von Mittelmeer zum persischen Golf, Berlin 1900, ii, 310-17, are based on these publications).
For the first quarter of the 20th century Bushahr continued to prosper, but, with the completion of the Trans-Iranian Railway in 1938 and the development of Bandar Shapūr and Khurramshahr, it lost its position as the principal port of the country. Unlike Bushahr, both Bandar Shapūr and Khurramshahr have wharves and jetties where large vessels can berth, and they are, moreover, connected with Tehran and other places in the interior by rail.

In 1946 the population of Bushahr was 15,000. It is understood that the Persian Plan Organisation intends to improve the port and other facilities of the town, but it seems unlikely that, even if this project is fully carried out, Bushahr will ever regain its former predominant position as a port.

BUSHAK, FAHR al-DIN AHMAD B. HALLAJ D
AHU ISHAK (kunya 
intakhtalus 
BUSHAK). Born in Shīrāz, he lived principally in Ṣafāvīs at the court of Iskandar b. ʿUmar Shāhī, grandson of Timūr and governor of Fārs and Isfahān, where he died (582 or 530/1427 or 1424). That is almost all we know concerning him (apart from an anecdot reported by Dawlatshāh). As an old iskandar b. Ṣawr (ibid., line 8; Ibn Rusta, 172, line 17 f.; 
J. de Morgan, 
Leipzig 1871, i, 90; 
C. Ritter, 
Leipzig 1861; F. Spiegel, 
Gastronomie und Donner, 
Paris 1800), but he nevertheless rescued from oblivion a series of technical terms, as did his imitator Mahrūn Karl, who wrote his 
dīwa-n of Dress 
(diwān-i albisa) on a plan analogous to that of Bushāk's dīwa-n.

(F. Horn [H. Masse])

BUSHANDJ, also known as BUSANDJ, in Middle Persian probably Pǔshang, ancient Ira-
After the Mongol conquest, under the vassal dynasty of the Kults (or Karts [q.v.], 1245-1398), Bushandj had a comparatively quiet period until it was conquered and ruthlessly destroyed by Timur in the middle of Dhu 'l-Hijjah 782/March 1381. It was rebuilt soon afterwards. It is also repeatedly mentioned in the 15th century [by Ḥāfīẓ-i ʿAbrā, [q.e.]], and a ribāṭ supposedly founded by Abraham (Iṣfīzārī, Raudād . . . fī . . . Ḥerdī, printed in Jā, v, 76 [July-Dec. 1865], 403 f.) was shown nearby in 897/1491-2. Later on, the place vanished from history; it was presumably destroyed during the Ōzbek and Türkmen raids. According to W. Tomasek (Topographie, i, 78), the modern Ghūrīyān is situated on its site. (W. Barthold-[B. Spuler])

**AL-BUṢṢIḤ ARĀṬ** (pastures) (sierras de yerba y de pasos), is the origin of the Spanish name Alpujarras; the Arabic toponym really applies to all the mountainous region which forms the extension of the Sierra Nevada southwards to the Mediterranean, from Motril to Ædra and Almeria; but more particularly designated by this name are the many fertile valleys which intersect this country (Padul - Bézmār - Lanjārān - Órgiva - Ċádiar and Óġjār - Alcóela - Laujar - Canjāýar - Rágol - Gádor). In the Middle Ages the Alpujarras were of greater extent because the capital was Jaén, and in addition to many fortresses it had more than 600 silk-producing places in which the god Osiris was the object of special veneration.

By Kudama. About this town developed a small, ephemeral province, Būṣūriyya, which lay between those of Aṭṭāh and Bahnaṣā.

Opposed to this documentation, another school of writers places the final defeat of the Umayyad in a locality also called Būṣūr, opposite Ashmūn, on the other bank of the Nile, about 180 kilometres south of Būṣūr al-Malāk. The region claimed to be the place of origin of Pharaoh's "magicians" and, according to al-Idrīsī, the inhabitants of his time had a certain reputation as sorcerers. This particular Būṣūr has left no traces.

Finally, there is a Būṣūr-Dafadnu in the province of Fayyūm.

**AL-BUṢṢIRD (see supplement)**

**BUSR** or ABUSIR, the name of several places in Egypt, which is not unnatural since it refers to places in which the god Osiris was the object of special veneration.

The name Abūṣir is found in the large suburban area west of Alexandria, a memory of the site of Taposiris Magna.

Būṣr, on the west bank of the Damietta branch of the Nile, in the province of al-Ghāribiyā. In the middle ages this small town was connected to a neighbouring settlement, Banā, so that one spoke of Būṣr-Banā. Famous in antiquity, Būṣr was an episcopal seat and the administrative centre of the pagarchy (kūra).

Būṣr al-Sidr, in the province of al-Dīža where there are still pyramids. The description of it by ʿAbd al-ʿLāṭif is a document of the first order, as are also the discoveries which he mentions in the cemetery of the town.

Būṣr, called Būṣr-Kūridīs in the Middle Ages, and, from the 13th/17th century at least, Būṣr al-Malāk, is located at the entrance to the Fayyūm within the western strip of Middle Egypt. Owing to the great number of places called Būṣr, Arab authors have found it difficult to situate exactly where the Umayyad caliph Marwan died. It is more than likely—and is in addition supported by a local tradition—that Marwan spent his last days at Būṣr al-Malāk. The information is already given by Ḫudānā. About this town developed a small, ephemeral province, Būṣūriyya, which lay between those of Aṭṭāh and Bahnaṣā.

The great rebellion of 1568-70 which was directed by Aḥmad ibn ʿAbd Allah b. Ṣafī, opponent of ʿAbd al-Latif, 171, 202-206; Ibn Māmnūtī, 114, 117, 118; ʿVāḵtī, i, 760; Masʿūdī, Tanbīh, 328, 331; Aversissement, 423, 427; Abu ʿl-ʿFrīdāʾī, Taḵwīm, trad., i, a, 148; Ibn Dukmān, iv, 131, v, 135; Vattier, L'Égypte de Mursīdād, new ed. Wiet, iii, 194, iv, 7, 139, v, 66-79 (where the question of the death of Marwan is examined); Ibn Dīḵān, 64, 73, 139, 151, 159; ʿAll Pāḵā, viii, 25, 6-11; Amelinoue, Geographie, 7-11; Salmon, Répertoire, in BIFAO, 1, 65; Breccia, Alexandria ad Aegyptum, 123-130; J. Maspéro and G. Wiet, Matériaux pour servir à la géographie de l'Égypte, 53-56. (G. Wiet)

**AL-BUṢṢIR** (see补充).
measure subdued the last armed partisan of 'Ali. We later find him leading several naval expeditions against the Byzantine Empire.

After the year 356/969, this agent of Muṣ'ūdiya's ambition, general and admiral by turns, disappears from the field of politics. He is said however to have lived at court till the death of the sovereign. According to the Shi'ites, he went mad because he brought down 'Ali's curse upon himself. He reappears in the reign of Walid I, when he is said to have taken part in an expedition to Africa. Other authorities make him die at Medina in the reign of 'Abd al-Malik. He seems to have lived to a great age and fallen into his dotage.

BUSRA [see Boškār].

BUST, a ruined city in Sīdījāstān, among whose imposing remains are the two principal groups of Kaʿlāʾi Bist and Lashkār-i Bāzār. It lies in the south of Afgānīstān on the now deserted banks of the Hilmand, near its confluence with the Arghandāb, on the stretch of the route through Girīḡk between Harāt and Kandāhār. Its present isolation, to which recent American efforts to rehabilitate the region will no doubt put an end, stands in contrast to the ancient prosperity of the area, celebrated in the middle ages for its great fertility, well irrigated orchards between two water-courses, and for its rôle as stage on the principal route between Khrūrāsān or Fārs on one hand and Sind on the other, that is, between Baghdād and India, at the very place where a pontoon-bridge crossed the river just as it became navigable in the direction of Zarānd. The Arab geographers of the first centuries, criticising Bust because of the frequent epidemics there, pointed at the same time to the commercial and intellectual activity of the city, and to the produce of its surrounding area, planted in fruit trees, vineyards and palms.

Such prosperity dates very likely from an early period. Precise knowledge is lacking however for the first stages of the development of Bust, whose existence was attested in the time of the Parthians, though we are ignorant of its exact rôle in the province of Sīstān, quarrelled over by the Sāsānīd s and the rulers of the Chionite-Hephthalite kingdom of Ṭabūlīstān.

Aʾso rather confused is the history of Bust from the moment when ʿAbd al-Raḥmān b. Samura [q.v.] annexed it to the territory of Islam, perhaps in 29/649-50 during the caliphate of ʿUṯmān, but more likely in 42/661-62 at the beginning of the Umayyad period. The first Arab expeditions were doubtless no more than raids of little permanent consequence, resulting in the payment of a tribute by the region but not in its occupation. In the second half of the 15th/7th century, Bust "became it seems, the advanced post of Muslim domination against the indigenous and independent princes of the frontier countries of the east, who bore the name or title of Zumbīl". (R. Hartmann). And the early sources mention several armed encounters in the neighbourhood, the Umayyads and first ʿAbbāsīd s having sent Arab governors there to suppress local rebellions in Sīdījāstān, or troubles instigated by the Khūrijītes (troubles emphasised in the Taʾrīḵ-i Sīstān) to fight or to negotiate with the ruler of Ṭabūlīstān. In particular we know the events of the revolt of Ibn ʿAbd al-ʾAshʿāb [q.v.] which took place at Bust and, somewhat later, its suppression by Maʿn b. Zaʿīda al-Shābānī before he was assassinated there in 156/773. Although Yaʿkūbī speaks of the place then held by Bust, the principal city of a province which rivalled in wealth Khūrāsān, and though one can imagine the strategic rôle then played by its fortresses, we nevertheless lack detail of the administrative organisation of a city which, in especially troubled political circumstances, seems, like other localities in eastern Iran and central Asia, to have enjoyed relative autonomy.

Subsequently, the Saffārid Yaʿkūb b. al-Layth, after having taken Kībul in 257/871, extended his domination as far as Bust, cited several times in the Taʾrīḵ-i Sīstān in connexion with his campaigns against his eastern neighbours and visits he made to the region. In their turn the Sāmānīds tried to establish a foothold in the area, and confused quarrels, accompanied by military expeditions, opposed the people of Bust to the envoys from the court in Khūrāsān as well as those sent by the caliphs at Baghdād. But it was during the period of the Ghaznavīds that Bust, taken by Subuktānī in 366/976 and thus separated from the province of Zarānd, enjoyed for nearly a century its most brilliant development. It served as a subsidiary residence for the rulers of Ghazna, who had there a permanent camp (al-ʾAshkar) mentioned by al-Mukaddasī, and al-Bayhaḵī describes the brilliant life led there, between ambassadorial receptions, hunting, and pleasure parties on the Hilmand, by a ruler such as Masʿūd I during his visit in 448/1056. It was there too, that the troops of the Ghaznavīd ʿAbd al-Rašīd successfully opposed in 441/1049-50 the advance of the Sāfīdūs, who had already been defeated several times trying to take the region. The sack of Ghazna, however, in 544/1149 by the Ghurīd ʿAlāʾ al-Dīn, followed shortly after by the conquest of Bust, its pillage and the burning of its mosques and minarets, marked for the latter city the beginning of a decline, echoed in the text of the contemporary geographer Yaḵūt.

The destruction of Bust was at that time far from complete. The old palaces of the Ghaznavīds were soon restored and inhabited by the governors of the region on behalf of the Ghurīd s, later of the Khwārizm-Shāhīs. Despite the various struggles in which the city was the stake, its continued existence is attested above all by funeral steles of beautiful execution, dating from the end of the 6th/12th century or the first half of the 7th/13th century and bearing the titles of important personages, undoubtedly the holders of a power at once religious and temporal established on a basis exclusively local. The destruction resulting from the Mongol invasion, however, about 618/1221, and from the passage of Timūr's hordes at the end of the 8th/14th century, brought about the final abandonment of the site, whose cultivated lands became steppe. Only the citadel, which played a rôle during the wars of the Great Mughals against Persia, and underwent at that time architectural modifications which are still visible, was maintained until Nādīr Shāh had it dismantled in 1738.

The facts relative to the history of Bust have been illuminated especially since D. Schlimmeberger's discovery, and the careful study by the French
Archaeological Delegation in Afghanistan, of an architectural group until then unexplored and scarcely mentioned by earlier investigators. North of a field of ruins, about 7 kilometres long and in places 2 kilometres wide, whose southern end alone had previously attracted attention, with its remains of the city wall proper, its citadel and the high silhouette of the "Arch of Bust", the royal residence itself has been identified, the ancient al-‘Aškar of the Arab authors and the lavqaragah of the Persian writers. Its three monumental palaces, formerly surrounded by gardens still indicated by the high walls,—they constituted, together with a mild climate, the charm of this subsidiary capital of the Ghaznavids—rise from within the enclosure of the "royal city", and the southern castle in particular has been almost completely cleared in the course of several excavations. Fronted by a spacious esplanade, on which opens a large mosque, and approached by an avenue a half-kilometre long bordered by shops behind a colonnade, it displays about a central court with four iwans, rooms grouped in bāyts, among which are several larger and luxuriously appointed chambers. Not only have the characteristic details of its plan been revealed. Beneath the heaps of earth caused by the fall of the higher parts—the construction is made largely of rough brick—and despite two successive fires the traces of which are still evident on the ground, it was possible to discover important elements of its exterior and especially its interior ornamentation, based on bare brick, of facings sculptured in earth or plaster and sometimes in the sense of "orchard"; it is used in Turkish in the sense of "kitchen-garden", and in Arabic in the sense of "garden" in general (pl. bāsātīn); in the Algerian dialect it denotes "cypress" (Beaussier), and at Beirut a "plantation of mulberry-trees" (Cuche); it forms part of several Middle Eastern geographical names.—It is the title of a didactic poem by the eminent Persian poet Sa’dī (q.v.), written at Ghīrāz in 655/1257, in ten chapters. The work is a classic, and has been read in primary schools in every country where Persian has been cultivated, especially in Iran, India, Central Asia and Ottoman Turkey. Indian authors have written several commentaries on this work in Persian, and there exist further commentaries in Turkish, notably those of Şāhī and Sīdī both (at the end of the 16th century). It was translated into Turkish by the scholar Taftāzān (q.v.) in 755/1354 (Gibb, Ottoman Poetry, i, 202), and into various other Oriental languages, such as Bengali, Sindi, and Pāndjābī. The principal translations into European languages are those of Forbes Falconer into English (Selections, London 1838), of Graf into German verse (Sa’dī’s Lustgarten, Jena 1856), of Baron Schlecht-Wesehrd into German (Vienna 1852), of Barbier de Meynard into French (Paris 1880), and of Constantin Caikin into Russian verse (Moscow 1935). The oldest MSS. give this work the title of Sa’dī-nsima. (SAID NAFICY)

I. — Gardens in Islam

The part played by gardens in the past and present life of the Muslim peoples appears to stem from the conception of Paradise, the ideal garden, as portrayed in the Korān, which paints so detailed a picture of the state of blessedness reserved exclusively for Believers that it might have served as a model for the creators of gardens both in East and West. There are to be found lawns interspersed with winding streams, trees bowed down with fruit, seats on which it is possible to recline in comfort, pavilions occupied by virgins waiting to welcome the elect. It will be noted that there are no flowers, but instead a wealth of fruit trees. Also worthy of note are the open summer-houses and in particular the streams of running water, cooling the air. The layout clearly has much in common with that of the oasis, a haven of freshness and fertility, the more delightful because it is found in the midst of those desert regions in which Islam principally spread.

It is to Iran, the home of most of our (European) fruits, the land par excellence of irrigated plantations and cultivated shrubbery, that the Muslim world would appear to owe its initiation into the art of landscape gardening. The fact that Arabic terms such as bustān or frīdāw derive from the Persian gives substantial support to this conjecture.

Persian horticulture flourished long before the birth of Islam and was associated with princely life. Even as early as Xenophon, we find references to the beautiful layout of the park planned at Sardis by Cyrus the Younger (407 B.C.). The palaces of the Sasanid kings, such as the Kār-i Shīrin of Chosroes II, look out on extensive vistas of water and greenery. There are, moreover, bas-reliefs to remind us of the vast wooded enclosures stocked with game where the sovereign could give himself up to the pleasures of the chase. Gardens in an architectural...
framework, such as esplanades and courtyards planted with trees, on the one hand, and on the other properties outside the towns, as spacious as parks, and embellished here and there by a solitary pavilion. — these two styles of gardens were adopted by the Muslim world and spread, with more or less continuity, across the nations and the centuries.

The first style influenced the architects of the 'Abbasid era, who built Samarra. The Dilawās al-Ḫākānī of the Caliph al-Mu'tasim (218-227/833-842), made up of an edifice at the front comprising three fāns and a suite of apartments, behind which was a vast esplanade walled with ramparts. “Parallel to these encircling walls were canals which were doubtless bordered by beds of flowers. Marble pools, fountains and other decorative features completed the scene”. H. Viiolet, who describes this layout, relates it to the “French style” garden with its ample spaces, straight lines and architectural aspect. These common features are perhaps not purely fortuitous, rather they may point to a distant common ancestry. These “French-style” gardens, of which Versailles is the most notable example, were inspired by the Italian garden which in turn derived from the Graeco-Roman garden, such as is found at Pompeii or Hadrian’s villa. These last certainly seem to have been much influenced by the gardens of the East.

Nevertheless, it was in Persia, the country of its birth, that this style of garden was to be preserved. The Šafawid miniatures in particular bear witness to its permanence. The Prince sits enthroned in a summer-house looking out on to a paved walk broken up by canals and lakes and separated by wooden fences from stretches of ground planted with flowers and trees. No less evocative are the Persian carpets known as “au jardin”. The area is divided into rectangles by intersecting canals. Fish swim in the canals and the rectangles are filled with flowers and shrubs (see, for instance, W. Bode, *Antique Rugs from the Near East*, New York, 1929, fig. 58). This same style of garden is also to be found at the opposite end of the Islamic world.

The private houses of the 'Abbasid era doubtless had their interior gardens. It is well-known that the art of the Tūnids which dominated Egypt in the 3rd/9th century was closely linked to that of Sāmarrā. In the houses of Fustāṭ, which can be assigned to this period, the rooms opened on to a central court in which brick-lined hollows were dug. Some of these were filled with water, others with soil for growing plants. The townsman, moreover, showed a remarkable taste for gardens. The Persian traveller Nāṣir-i Khusrav draws attention to those which adorned the terraces. An irrigating machine on the top of a seven-storey house and operated by oxen was used for watering orange, banana and other fruit trees as well as many kinds of flowers and fragrant plants.

At this time Ifriqiya was held in the name of the 'Abbasids by the Aḥūlabid amirs, who disseminated the fashions of Bagdad throughout the lands of the Berbers. They had first one and then a second residence on the outskirts of al-Ḫayrawān. The second, Raḵḵāda, was seven kilometres distant from the town. The grounds, which according to al-Bakrī, were surrounded by a wall more than 10 kilometres long, must have been mainly laid out as gardens, irrigated by cisterns of which remnants are still in existence. The largest of these hydraulic works is a huge quadrangular reservoir with solid walls reinforced on both sides with buttresses, in whose waters a raised pavilion was reflected.

The tradition of these country seats must have persisted in Ifriqiya in spite of hardships which in the 9th/11th century ruined the country. We come upon gardens again in the 8th/14th century under the Hāfsids of Tūnīs. The vast domain of Abū Fīrḥ, created by al-Mustansīr (647-75/1249-77) in the neighbourhood of his capital (near the present village of Ariana) included various features which foreshadowed the Maghribī taste for the agdāl. Ibn Khaldūn describes it with a wealth of detail which is unusual for him.

“One found there”, he tells us, “a forest of trees, some of which were trained on to trellises, while the rest were left to grow in complete freedom. The branches of the lemon and orange trees mingled with those of the cyprus, while, below, the myrtle and jasmine smiled upon the water-lily. In the midst of these groves, a large garden encircled a lake so vast that it might be taken for an ocean. Water was brought there by the ancient aqueduct (which in former times supplied Carthage and which the Hāfsid al-Mustansīr had had repaired). Following this conduit, the waters gush through a huge outlet into a square reservoir [serving as a decantation basin] and, thence, through a fairly short canal, to the great pool which they fill in swirling torrents. At each end of the pool stands a pavilion, one large, one small, whose roofs rest on columns of white marble and whose walls are faced with marble inlay”.

This same period witnessed in Morocco the creation by the Marinid sultans of vast cultivated enclosures such as that attached to the Palace of Fez al-Djādīd, called Amina al-Mariniyya, in which terraces and raised pavilions dominated the plantations and the surrounding countryside. Abandoned after the fall of the Marinids, this park was restored between 1240 and 1250/1824-34 by the 'Alawīd sultan Mūlāy 'Abd al-Rahmān. This same sultan created the agdāl of Marrākūsh, which the modern historian al-Nāṣirī describes for us. It was an immense park or rather a group of gardens planted with one or two species of fruit trees or perfumed flowers, either indigenous or imported, cultivated for sale. In the midst of the plantations there were lakes with pleasure boats. The streams which filled these lakes provided water for the gardens and even turned the wheels of water-mills. Pavilions stood in this central section.

We can still see enclosures of this kind in the agdāls of the imperial cities of Morocco such as Marrākūsh or Meknes. Away from the dense urban centres, the agdāl is adjacent to the official quarter, a rural annex to the urban palaces. It is profit-making land, enriching the coffers of the sovereign. It also provides a place of recreation and repose for his harem. This type of plantation may have some links with the oriental tradition of royal parks. Nevertheless, the name by which it is known and its general resemblance to the great domain of a Berber chieftain inclines one to look to the West for the models which inspired its creation.

This is not the case with the riyād, the interior garden of the palaces and rich dwellings of the Muslim cities of the west. It is almost certainly to Iran that we should look to find the origins of this style of garden whose layout is preserved for us in the Persian carpet: straight pathways, intersecting at right angles and separating square patches of green on which fruit trees and decorative plants abound. Sometimes canals with flowing water cross the
pathways, sometimes their intersections are marked by ornamental fountains. A summer-house at one end of the garden dominates the vista, unless the garden is divided by two or four sides by galleries, in which case the doors of the apartments give on to this open space. The riâyâd seems, in fact, to be an extension and elaboration of the patio. It is designed in harmony with the architecture of the house and completes its lay out.

If the Maghribî house with its interior courtyard is inspired by the Graeco-Roman peristyle house, the riâyâd which fills this courtyard seems to be a legacy from Persia, like so many other elements in the Muslim civilisations of both East and West. We do not know at what period the West first adopted this style, though we find traces of it as early as the first half of the 6th/12th century.

Excavations carried out at Marrâkûsh beneath the ruins of the first mosque of the Kutubiyya have yielded the plan of a small riâyâd which can be dated as belonging to the period of the Almoravid 'Ali b. Ýûsûf (500-537/1106-1142). Here a rectangular patio is divided by two intersecting paths. The remnants of Castillejo have been uncovered near Murcia. This appears to have been built by Ibn Mârdânshâh (541-566/1147-1171). Its rooms enclose a riâyâd intersected by pathways, with two pavilions at the narrower ends. This type of riâyâd appears to be classical in Andalusia. In the 8th/14th century, the Granadan poet Ibn Lûûûn enumerates its features. He recommends the laying out of a garden which offers "in its centre trellises shading walks which should encompass the flower-beds like margins". A summer house, wide-open, surrounded by rambler roses and myrtles, affords a place of rest which commands the whole domain at a single glance. The Nâşrid sultans of Granada incorporated this domestic theme into the sumptuous architecture of their palaces. In the Alhambra of Muhammad V (763-93/1362-91), the famous Patio of the Lions is nothing more than a riâyâd. Pathways intersecting to form a cross separate four plots which must have been intended to be planted. Two pavilions raised on columns jut out at the two narrow ends of the rectangle. In addition to this interior garden, the guests at the Alhambra had the Generalife (Djanaân al-ûrâf) at their disposal. Here again, we find shrubberies, canals fed by fountains and galleries enclosing the open space.

It is very probably via Andalusia that this style of town garden, originating in Persia, spread throughout the three countries of North Africa. In Morocco, the Alhambra inspired the Sa'dîd Ahmad al-Mânsûr, who adopted its design on a grandiose scale in the palace of the Badî of Marrâkûsh (986-1012/1578-1603). A court measuring 135 metres by 110 metres, surrounded by apartments and pavilions, looked out on shrubberies alternating with vast lakes. Up to our own day, Moroccan townsw like Marrâkûsh and Fès have seen the creation of enchanting riâyâds. In Tunisia, the Andalusians, driven out of Spain, spread the fashion in the towns in which they had taken refuge. As for Algeria, the gardens of the beautiful country houses which are scattered about the outskirts of Algiers were among the luxuries enjoyed by the Corsairs and were tended by a vast number of captives who laboured in them all the year round.

II. — MUGHAL GARDENS

The Mughal emperors of India, Akbar [q.v.], Djahângîr [q.v.] and Shâhdâjahân [q.v.] were all great lovers of nature, a quality which they inherited from their progenitor, Bâbur [q.v.] who after the conquest of Hindûstân, lamented the absence of well-planned gardens in his new dominions. Bâgh-i Wâfâ was the first garden which he laid out near Kâbul in 914/1508, followed by larger and more magnificent ones in Agra [q.v.], his Indian capital.

His grandson Akbar, after constructing the fort of Harî Parbat (Kashmir) in 1066/1557 laid out the Nasîm Bâgh flanking the Dal lake. This garden is now in ruins, with the exception of stately shânîr trees planted by Shâhdâjahân (1037-1627-1659). But the most charming of the Kashmir gardens is the Nasîhât Bâgh laid out by Afsâf Khân (c. 1035/1625), a brother of Nûrâdâjahân [q.v.], the queen of Djahângîr. In natural beauty and architectural skill this garden is considered matchless. It was built in 12 terraces, representing the 12 signs of the Zodiac. Its water-supply was temporarily stopped by Shâhdâjahân, who considered it too splendid for a subject, but was soon restored. The most-famed Shâlîmâr was founded in 1029/1619 by Djahângîr. The etymology of the word Shâlîmâr or Shâlîmâr is dubious; it was in vogue even in pre-Mughal days, being the name of a Dal cascade in the times of Djahângîr (Tuwûb-i Djahângîrî, trans. Rogers, li, 151). Nâdir Shâh's historian, Mirâ Khâtû, spells it Shâh Mâh, while the Sikh chieftain, Randîl Singh (1214/1759-1255/1839), changed it into Shâkh, declaring that the word Shâlîmâr had ominous implications (see S. M. Latîf, History of the Panjab, Lahore 1892, 260).

Apart from the Srinagar (Kashmir) Shâlîmâr, there is an equally famous one of the same name at Lahore; a third one, at Delhi, is no longer extant. The Kashmir Shâlîmâr is remarkable for a pavilion, built by Shâhdâjahân, with exquisitely carved pillars of black marble. This pavilion, which is surrounded by a series of cascades, contained four large stone doors in the days of Bernier (1679-1826).

The Lahore Shâlîmâr was founded, in three terraces, by 'Ali Mârdân Khân, an Iranian nobleman who, after surrendering the town of Kandahâr, of which he was the Governor, to the investing Mughul armies, had come down to Lahore in 1048/1638. He was warmly received by Shâhdâjahân, who appointed him Governor of Kashmir and, in 1049/1639, of the Pandîjâb also. Being a celebrated canal engineer, he was, immediately on his arrival, entrusted by the Emperor with the digging of a canal from the Râwî which would supply water
to the gardens. He was, however, transferred to Kabul before the canal reached Lahore. On completion, a year later, it cost the Imperial exchequer a sum of 100,000 rupees. The garden suffered much damage during the Sikh rule, most of its marble having been looted and taken to Amritsar.

The Mughal gardens follow a definite plan, a salient feature being the construction of a central channel and shallow tanks in the centre surrounded by soft green turf, a lofty boundary-wall, or four-fold garden. Taken as a whole, the garden looks like a combination of rectangles and straight lines; no curved paths or even circular parterres are allowed.

Great care was taken in the selection of the sites, and the foot of a wooded hill, or a charming natural feature, had often to be selected, and a large area around it purchased. The foot of a wooded hill, or a charming view, was the best specimen of Mughal horticulture. The Mughal gardens are generally arranged in squares or geometric patterns, usually in the form of terraces placed thus as to make the distribution and flow of water easy. Each terrace has four divisions to conform to the traditional plan of the Cahir bâgh or four-fold garden. Taken as a whole, the garden looks like a combination of rectangles and straight lines; no curved paths or even circular parterres are allowed.

The gardens of the Great Moghuls, London 1913; A. S. Bazmi Ansari, Td'rikh Gulzdr-i Kashmir, Lahore, 1863, 93-5; Kirpa Ram, Tabakdt al-Shafi'iyya, Damascus 1304 (recte 1299 A.H.) ii, 53; Subkt, Miftah al-Sa'da, Cairo 1286 A.H). i, 204, 216; Tha'alibl, Damascenus 1304 A.H., iv, 204-231; iili, 225; iv, 73; 160 f.; 232; 236; 281; Bayhaq, Tafsirat Sunnan al-Ikhsha, i, 34 f.; Yâkût i, 612; Ibn al-Athîr, i, 155; Ibn Khallîkûn (1299 A.H.) ii, 53; Subkt, Tabahât al-Shâ'ibiyâ, iv, 4-6; Damiri s.v. al-thâ'abân; Dawlatghâh, Taghdkra, 26 f.; Taghdkprûzaďe, Mslfâh, Sa'dâ, i, 299 f. **Bibliography:**
- Abu 'l-Fadl, Âlam-i Akbarî, truns. Jarret i, 361; 'Abd al-Hamîd Lahorî, Al-Bustl, an Egyptian poet of the 5th/nth century. He was much praised for his skill in applying the taginis (paronomasia) and especially the taginis mutashibih i.e. the use of homonyms for the sake of puns. This technique he developed gradually after having heard in his youth a quibble from the poet Shu'nab. 'Abd al-Malik al-Bustl (Yatimat al-Dahr, iv, 233 f.). He was on friendly terms with Tha'alîbî, who composed his Ahsan mâ sam'i'tu on his instigation and gives of Bustl's art an appreciative selection in his Yatimat al-Dahr. His Dwan was published at Beirut in 1294/1877-8. Especially famous is his didactic poem al-Nâhiyya or 'Usvnûn al-Ishâm.

Bustl wrote also some poems in his mother-tongue, Persian, but they were never collected (see H. Ethâ, in Morgenländische Forschungen, Festschrift H. L. Fleischer, 1875, 55-7). He is sometimes confounded with his namesake Abu 'l-Fath al-Bustl (reote al-Baynî) an Egyptian poet of the 5th/11th century (see Ibn Raşıh, al-UMda i, 200, 18 and Ibn Sa'dî, Mughrîb 103 Tallquist).

**BUT** [see Budd].

**BUTAYN** [see Nuğûm].

**BUTNÁN, the name of a wâdi located thirty kilometres east of Aleppo. At this place springs feed a large stream, Nahr al-Djabab, which flows south and empties into the salt lake of Djabâb. These natural conditions have permitted the development...**
of essentially agricultural villages (fruit trees and cotton), of which the most important are the market-towns of Bâb and Buzâ‘a. A convenient stage about a day's march from the valley of Kuwyak, it was always a halting-place on the routes from Edessa and Rakka, and the revenues drawn from the saltbed of Diabdûl formed consistently an appreciable support for the finances of the governors or rulers of northern Syria.

Popular etymology relates Butnân to the root \( b-h-t \) and gives it the meaning of "low-lying ground". In fact the name preserves the memory, beyond a Byzantine Batnai and a Roman Batnæ, of the principality of Pâtîn.

Conquered by Ḥabbîb b. Maslama, Butnân fell very soon under the influence of the new centre, Aleppo, and henceforth played only an episodic rôle. In 70/689-90, the caliph ʿAbd al-Malîk wintered in the valley, during a struggle against Muṣ‘ab b. al-Zubayr. The Carmathians made a disastrous appearance there in 90/708. Under Sayf al-Dawla's rule, it was devastated by Nicephoros Phocas in 966/365. In the time of the Mirdâsids the valley was under the authority of Tutush in 1080/472. The Crusades and the Frankish occupation of Edessa and Antioch opened a period of insecurity which began in 1098/491-92 with an Armenian raid, doubtless in connection with the siege of Antioch. A prompt response by the Saljûqs of Aleppo ended in the extermination of the large Ismâ’îlì community at Bâb. Burned by Joscelin of Tell Bâshîr in 1125/518, Buzâ‘a as well as Bâb was taken by the Emperor John II Comnëns in 1138/532. The arrival of Nur al-Dîn in Aleppo brought back security. The Butnân of this period is known owing to the descriptions, as numerous as they are stereotyped, of the Arab geographers (cited by Le Strange and Dussaud).

With the Saljûqs, Butnân disappeared from the political scene. The region was administrated by two Mamlûks, Dûndûs, appointed by the nâṣîb of Aleppo, one for the towns of Bâb and Buzâ‘a, the other for the neighbourhood of Diabdûl. The Turks made it a ḍâirî, where a ḍâirîmâbîd subordinate to the Paša of Aleppo kept an eye on the salt-mines of Diabdûl (400-500,000 pounds annual revenue for the exchequer in the middle of the 19th century). He resided at Bâb, which had 6,000 inhabitants at this period.

**AL-BUTR**, the name given to one of the two groups of tribes who constitute the Berbers \( [q.v.] \), the other being called al-Barânis \( [q.v.] \).

The chief groups of whom al-Butr was composed were the Lawâta, the Nafûsa, the Nafzâwa, the Banû Fâtîn and the Miknâsa. Their earliest habitat is the region of steppe and plateau which extends from the Nile to southern Tunisia; they were thus originally Libyan Berbers. But, very early, several of these peoples (Miknâsa, Banû Fâtîn, and a part of Lawâta) moved towards the west—to Algeria (the areas round Awrâs, Tiaret and Tlemcen) and Morocco (the Moulouya valley, the Saharan country between Sidjîlmâsa, Figîg and Twât, and the Sebou basin), and from the western Maghrîb many elements penetrated into Spain. An attempt has been made to present the Butr as the Berber nomads and camel-drivers par excellence. This was perhaps their primitive way of life, which is no doubt why Arab historians have attached to this group peoples of definitely nomadic habits, such as the Hawaiîra and the Zanâta. The Nafûsa, the Nafzâwa and a part of the Lawâta appear nevertheless to have become stabilised rather early in the mountains of Libya, perhaps at the time of the Arab conquest. As for those who moved into Algeria and Morocco, they were soon settled and even established a number of small towns.

The greater part of the tribal names of which this group is composed are still current, but the collective name itself has disappeared. It is the plural of the Arabic \( al-ābâr \), the alleged surname of Mâdhûs, whom these peoples recognised as their common ancestor. The word means "he whose tail is docked, mutilated, he who has no descendants". The last sense is hardly suited to an eponymous ancestor; the first two are bizarre. However, the eponymous ancestor of the other group, Burnus, bears a name coincident with the Arabic word (an early borrowing from the Greek \( bîros \)) designating the garment which we call burnous. Thus, the Burnüs might be "the (wearers of) burnous, or long garments" and, in contrast, the Butr would be "those clad in short garments". In fact, in the Arabic dialect of north-west Morocco, there is an adjective \( gûftî \) (a quadriliteral expansion of the root \( h-r-t \)) meaning "he who has his tail cut short", and is applied in particular to the very short jelldbas of the mountaineurs (cf. W. Marçais, Textes de Tanger, 439).

For other ethnic appellations derived from
peculiarities of dress, note that of the Şanşâda Berbers [q.v.], who are called mulâbbâhimân “those who wear a veil over the mouth”; and that which has been suggested for the Masmûda [q.v.] Berbers, who are called Shulûh (cf. Milanges Gaudroy-Demoty, Cairo 1939, 305).

BUWAYHIDS or BOYâIDS, the most important of the dinasties which, first in the Iranian plateau then in Irâk, side by side with the Sêmánâds of Khûrsân and of Mâwâtâ al-Nâhî, marked the “Iranian intermezzo” (Minorosky) between the Arab domination of early Islam and the Turkish conquest of the 5th/11th century. Its name derives from Buwayh or Bûyeh, the father of three brothers who founded it, ʿAll, al-Ḥasan, and the youngest, Abûnâd. Conducîvers of humble birth, they belonged to the population of the Daylamâs [q.v.] who, newly won over to the Shiîte Islam, were at that time enlisting in large numbers in all the armies of the Muslim East, including those of the Caliphate.

To some extent, it was the Daylamâs who, with the advent of the Buwayhids, assumed power and imposed on the régime something of their own character. While the Daylamâs remaining in Daylam formed small principalities, sometimes extending as far as Adhâkarbaydân, the others, in Iran and ʿIrâk, developed in consequence into a political factor of growing importance. The Buwayhidâs, who, to begin with, had followed one of their compatriots, Mâkkân b. ḳâkî, who had entered the service of the Sêmánâds, and then their Gilânî ally Mardawîdî [q.v.] in his struggle against their common enemy, the Zaydî state of Tabaristân (sometimes extending as far as Rayy), continued as far as the Gilânî Mardawîdî whom he carved out for himself in central Iran a vast autonomous principality. Soon, however, they began to adopt a somewhat intractable attitude towards him. Having become for a time master of Isfâhan, then, more permanently, of Fârs, ʿAll, to protect himself against Mardawîdî, and in spite of being a Shiîte, got his authority in the government of the province recognised by the Caliph, as the ʿAbbâsid armies had been incapable of reconquering it. He still had possession of it when in 332/945 Mardawîdî was assassinated. After confused struggles (see the articles ʿIMĀD AL-DÂWLA, MUʿizz AL-DÂWLA and RUKN AL-DÂWLA) against the lieutenants of allies of the Sêmánâds or of the various clans who shared among themselves an influence with the Caliphate, ʿAll, the eldest, kept the province of Fârs, while his brother al-Ḥasan occupied almost the whole of Dîbâbâl and the youngest, Abûnâd, entrenched himself on the one hand in Kirkân and on the other in Khûzistân. These important strongholds, and more especially this last acquisition, drew the Buwayhids into the interplay of factions for power in ʿIrâk and the other territories of the Caliphate under the successive amîr al-umârât. Only a very close study can determine whether, in the general post of intrigues and betrayals, the Buwayhids were allied to any one specific faction. However that may be, in 334/945, Abûnâd entered Bagdad. The régime which he set up there lasted until 447/1055. The new era was at once inaugurated by a change of name: Abûnâd, ʿAll and al-Ḥasan respectively had bestowed on them simultaneously by the Caliph the honorific titles (šâhâb) of Muʿizz al-Dawla, ʿImâd al-Dawla and Rukn al-Dawla, by which they were henceforth known to history. Before long, ʿImâd al-Dawla died without an heir, leaving Fârs to ʿAdûd al-Dawla, son of Rukn al-Dawla. When the latter died (366/977), after Muʿizz al-Dawla, ʿAdûd al-Dawla, finding himself head of the family, dispossessed his nephew, ʿĪzz al-Dawla Bakhtîyâr, of ʿIrâk, and only allowed his brother, Muʿâyyid al-Dawla, to remain master of the rest of Buwayhid Iran, by virtue of his incontrovertible loyalty. ʿAdûd al-Dawla, who was the most distinguished personality of the dynasty, achieved the fullest unity that the family was to enjoy.

Outside ʿIrâk, the new principalities merely joined the number of those which, for a century, had been carving up the ʿAbbâsid Empire. The Buwayhid princelyship of ʿIrâk in a sense did little more than implant in this last ʿAbbâsid redoubt the form of government which had triumphed elsewhere. But there was, in this instance, a factor of greater importance, in that Bagdad was the very centre of the Caliphate. It is true that its seizure by the Buwayhids did little more than set the seal on the developments which had, in effect, placed the Caliphate under the domination of the army chiefs, promoted amîr al-umârât. But this time there was the added fact that the Buwayhids were professing Shiîtes, so much so that it might have been asked whether they were not about to suppress a Caliphate whose legitimacy had no special meaning for them. Nothing of the sort happened. Doubtless Muʿizz al-Dawla was aware that the Shiîtes were in the minority, and that, had he destroyed the Caliphate in Bagdad, the institution would have reappeared elsewhere. It was better therefore to keep it under his thumb, both to legitimise his authority over the Sunnis in his states and to strengthen his diplomatic relations with the world outside by the weight of the respected moral authority which the Sunni princes still enjoyed by right. In fact, deriving their official authority from the Caliphate, the Buwayhids behaved as though they believed genuinely in the legitimacy of the ʿAbbâsid Caliphate.

The question of the relations between Buwayhids and Caliphate is moreover bound up with that of their religious adherence. It has sometimes been thought that the Buwayhids were Zaydîs because Daylam had been the scene of the activity of the emissaries of these same Zaydîs who had set up political hegemonies in Tabaristân and, on the very borders of Daylam itself, by those of their rival al-ʿUtrûgh, around the year 900. All the same, there were also Ismâʿîlîs (Misk., ii, 32-33) in Daylam and, in the entourage of al-ʿUtrûgh or his descendants, Twelvers (E1, s.v. al-ʿUtrûgh), and Mardawîdî, affected perhaps by Ismâʿîlî propaganda, had at any rate joined the Sunni Sêmánâds in fighting the Zaydîs of Tabaristân. At this time, Twelver theology proper was only just beginning to be elaborated, and there is consequently nothing remarkable in the persistence, in later Buwayhid society, of Zaydî doctrinal influences or, linked to these, Muʿtazzî influences. But, for the Buwayhid conquerors, politics took precedence over religion. The notion, for a time entertained, it is said, by Muʿizz al-Dawla, of conferring the Caliphate on a certain Zaydî ʿAlîd in his entourage was set aside, never to be taken up again, precisely because it would have been necessary to obey such a Caliph. The distinction between the various branches of Shiîsm was probably not yet clearly defined outside the Zaydî states (leaving Ismâʿîlîm aside), and the Twelver tendency, certainly in

Captured by Fadlūyeh

Captured by Toghrul-Beg and imprisonment of al-Malik al-Raḥim.

Complete genealogical tables are to be found in Zambaur 212-16 and Q.

'IRĀK and Fārs were united from 367 to 372, 376 to 379, 388 to 415, and 435 to 447.

'IRĀK and Kirmān were united from 334 to 336, and 380 to 388. Kirmān was united with Fārs from 338 to 367 (to 372 with 'IRĀK), 380 to 403, 419 to 440; it stood alone from 403 to 446 and from 440 to 448.

'IRĀK stood alone from 334-367, 379 to 380, 416 to 435. Fārs stood alone from 322 to 338 and from 372 to 380.

A union between 'IRĀK, Fārs and Kirmān was achieved from 367 to 372, 388 to 403, 435 to 440.

The DJIBĀL always stood alone, except during the early days of the dynasty.

Umān, except for a short time under Šams Šam al-Dawla, when it was united with 'IRĀK, was united with Fārs. Basra and Ahwāz, after 'Aḏud al-Dawla, were often separated from 'IRĀK or constituted an autonomous government at the heart of the 'IRĀK kingdom; they were often incorporated in the kingdom of Fārs.

Simāl-Dawla [then KAKWAYHIDS]

Ghaznavid conquest

Simāl-Dawla

Non-simultaneous possession, but identity of person.

Simāl-Dawla - Fārs

Partial, disputed possession.

Simāl-Dawla - Fārs

Simultaneous possession.
Mesopotamia and probably in central Iran, was the majority form of Shi’ism. In fact, about the time when the Buwayhids were seizing power (and was this purely fortuitous?) the doctrine was spreading among adherents of that movement that after the period in which the imāms were present in person, followed by that in which they were represented by a wakil, the time of the “great occultation” was coming, when nothing more would be known of them. Thus, if the ʿAbbāsīd Caliph was not, strictly speaking, legitimate, at least, if he tolerated Shi’ism, there was nothing discreditable in putting up with him. It is certain that the Buwayhids welcomed somewhat indiscriminately Shi’is or Mu`tazilis of different shades of opinion, but politically they were Twelvers. At no time did the Buwayhids plan the persecution of the Sunnis by the Shi’is — both sects were represented in their army; rather they intended to set up a sort of ʿAbbāsī-Shi’i condominium, which freed the Shi’is from the obligation of a certain faitya and provided them, as well as the Sunnis, with an official organisation. Basically, they were reviving, from the Shi’i angle, what had been the dream of many ʿAbbāsids from the time of al-Ma’mūn. Thus, they believed, they acquired a strong following, without at the same time alienating the rest of the population. Without the smallest doubt, Twelver Shi’ism owes to the Buwayhids régime not only this organisation, but even a part of its doctrinal structure. The importance of the rich Shi’is and the Shariʿis towards the end of the ʿAbbāsīd era is well-known. It was upon them that —leaving aside the army — the Buwayhids régime depended in its social relations with the local population. The régime organised the ʿAlids—or as they are more usually called, the Tālibids—into an autonomous body to counterbalance the ʿAbbāsids, whereas formerly this family unit was merely integrated into, though, of course, dominated by, the ʿAbbāsids. On the doctrinal level, the presence of Imāms in the 3rd/9th century and the fact that the Twelvers had for a long time been, in a somewhat negative fashion, those among the Shi’is who had not joined in active rebellion, had obstructed the work of the traditionists and theoreticians. The Buwayhids now made up for lost time. While al-Kulainī, the first of the great theologians whom the Twelvers recognised as specifically their own, died at the dawn of the Buwayhīd régime in Iraq, the second and more important, Ibn Bābawīya (Bābawīya) was encouraged in his work by the Buwayhids in the third quarter of the century. He was followed by others among whom—also important in Iranian Shi’ism—were Arabs from the old ʿAlid citadel of Kūm. In Baghdad, the brother ʿAbbās-ibn al-Raḍī and al-Murtadā were, throughout the whole of the first quarter of the 11th century, the real masters of the town, acting as intermediaries between the Buwayhīds, the Caliphs and the population, at the same time as the Shi’is scholars and traditionists. It is said that at this moment when the four schools remaining to the Sunnis were beginning to be defined by them as exclusively orthodox, they wished that their form of Shi’ism might be recognised in the heart of the umma as a sort of fifth authorised school. More readily apparent from the outset of the régime is the organisation or recognition of forms which are still those of Shi’ism to this day. Influenced perhaps by Daylamite practices, Muʿtaz al-Dawla openly created or consecrated the lamentations of the ‘Ashore. He also created the festival of Ghabīr Khunn. The ʿAlid maṣḥafs, genuine or conjectural, were embellished, and ʿAḍud al-Dawla was the first to be buried there after ʿAlī. Shi’i schools were created, such as the Dār al-ʿilm of the vizier Sāḥib, endowed with maḥāfs, a replica (921/1512) of the Fatimid “University”, and considerably earlier than the Sunni Nizāmīyya of the Salджiḥids; and in the mosques, the Shi’i cult, including the public call to prayer, was in dangerous competition with the Sunni cult.

Naturally, it was out of the question that the recognised Caliph should govern effectively. In the same way as the laḥabs of Nāṣir al-Dawla, the first of its kind conferred on the Ḥamdānid, the Buwayhīd laḥabs show that, while it was the Caliph who legalised their power, they alone were its custodians. Al-Mustakfi, the Caliph who welcomed them, had joined forces with many others before them. He was replaced by his personal enemy al-Muṭīʿ, who nineteen years later himself had to yield the throne to al-Ṭāʾī for having backed the wrong side in the struggle between the heirs of Muʿtaṣ al-Dawla. Al-Ṭāʾī in his turn abandoned the throne to al-Kādir. Nevertheless, the life-span of the Caliphs in the time of the Buwayhīds—three and a half reigns in a century—was appreciably longer than that of their predecessors—precisely because they no longer ruled in anything but name. As to the laḥabs, they became more numerous as they declined in value. As each prince in the family, then little by little princes of other dynasties, claimed them too, it was necessary first to double and then treble those of the head of the Buwayhīds. Thus ʿAḍud al-Dawla was also called Tāḍī Al-Milla etc. The last Buwayhīd went so far as to claim that he had conferred upon himself a title ending in dīn, faith,—a procedure and implication (a condemnation of Sunnism) which obviously the Caliph could not accept. In the same way, the supreme prince marked his superiority over his umārā’ relatives by proclaiming himself from ʿAḍud al-Dawla onwards, maṣīḥ, and even, in Iran though not in ʿIrāq, šīkhangi, the old Sasanid title. The last of the Buwayhīds committed the sacrilege of styling himself al-Malik al-Raḥīm, a title properly reserved for Allāh alone. The exalted position of the Buwayhīds was shown also in the attribution of their name, after that of the Caliph, in the ḥudba, except in the Caliph’s quarter, and on coins, as well as in the privilege of having the fals’is beaten in front of the princely residences at the three principal, and later five, hours of prayer.

To turn to the exercise of power, the essential point is that there was no longer any instrument of government in Baghdad which depended even in law upon the Caliph—though for a time under Nāṣir al-Dawla this had been the case. Everything, especially the wazīrat, was now an institution directly attached to the amirate, though this transfer did not in itself mark any change in the distribution of functions. Topographically, everything in Baghdad was now at the Dār al-Mamlaka [see below]. During the period in which the power of the régime conferred on the wazīrat, as on the principality, a certain stability, there were Buwayhīd wazīrs who were by no way inferior to the greatest wazīrs of the Caliphate, and who stayed even longer in office. Such was al-Muhallabī under Muʿtaṣ al-Dawla, Ibn al-ʿAmdī under Rukn al-Dawla, the ʿṢāhib Ibn al-ʿAbbād under Muʿṭayyid al-Dawla and Fāghr Dawla. All three of these were very cultured men and at the same time great administrators. Nevertheless, some
of the Buwayhids, principally 'Aḍūd al-Dawla, the greatest of them all, preferred to keep the co-ordination of the instruments of government in their own hands and, in practice, devolved the functions of the wazirs, with or without the title, among two or three high dignitaries. Their inadequate knowledge of Arabic had made it impossible for the Buwayhids of the first generation to do more themselves than reap the benefits of the work done by their more effective wazirs. Under the last of the Buwayhids, the wazirate was more unstable although wazirs were frequently drawn from a single family. Of course, the Caliphate still kept a secretariat and a Chancellery, but these were exclusively occupied with the administration of matters pertaining strictly to the Caliphate or with international correspondence on behalf of the amirs.

The functions of the Caliphate comprised the administration of its goods and the organisation of the palace, the representative duties which devolved upon the Caliph, the control of the good works and religio-legal life of the Sunnis and a certain moral share in the administration of Baghdad. The income of the Caliph, apart from family and private means, was no longer what he set aside for himself out of State revenue, for it was no longer the Caliph who authorised wages and salaries. On the contrary, as was already the case in the time of Nāṣir al-Dawla, an allowance was given to him by the amirs out of the public funds which, in former times, had been administered by himself. The total was smaller than before though still worthy of his station—two or three hundred thousand dinārs under the early Buwayhids—to which must be added the numerous gifts made to him by the entire Muslim world and by the foreign ambassadors, as well as what he received from the Buwayhids themselves at festivals and investitures. Against these however, must be set the forced contributions extorted by the Buwayhids in times of crisis. As to his religio-legal powers, they consisted in the nomination and control of the personnel of the mosques and the holders of the office of kāfd for the Sunnis, in particular in Baghdad where the Caliph al-Kādir compensated for his powerlessness to oppose the Buwayhid government by a drive to enforce the letter of Sunnite orthodoxy, especially among the Mu'tazilis and the Ismā'īllis.

The transfer of government from the Caliphate to the amirate did not ipso facto alter the character of the government. In practice, the Buwayhid régime established the absolute supremacy of the army in the government. However, since the general functions of public administration still had to be carried out, this supremacy meant also that, in a sense, the military authority now extended its competence to fields which previously had been outside its province. The innovation which probably had the most serious consequences was the transformation of the ik̄hāf régime. For a long time, faithful supporters and, increasingly, the military chiefs, had been rewarded by the Caliphate with the grant in quasi-ownership of lands appropriated from the state domain. In fact, for the last hundred years or so, this source having been inadequate, high-ranking officers were sometimes granted the right to the taxes of a fiscal district, with no further obligation than to pay the standard Muslim tithe to the public Treasury. The Buwayhid régime, following in the footsteps of the Hamdānids, extended and ruthlessly intensified this practice. Many districts were systematically distributed as ik̄hāfs of this new type, now without even tithe obligations to the Treasury. Miskawayh, or, before him, Thābit b. Sinān, have described perfectly some of the consequences of this system. From the point of view of the central administration it meant that the princes exercised a clean-cut authority over the field of control of fiscal transactions in part of the country and, in the long run, even of factual knowledge of the nature and extent of the tax levied. In so far as the fiscal value of each district remained roughly calculable, it tended no longer to be within the province of the diwān of Taxes, but that of the Army. The diwān of Taxes, deprived of part of its functions, correspondingly reduced its staff and the number of its departments. Nevertheless, the Buwayhid ik̄hāf was not a fief, but an assignment of salary; the beneficiary would exchange it, at his own or the government's wish, if the revenue of the district were no longer equal to the balance due to him, or for any other expedient cause. He had no permanent ties with the district and therefore no interest in its development. At best, the means thus placed at his disposal enabled him to build up more stable properties. Nevertheless, they were not yet either ik̄hāf-holders of the provincial governments—these functions, when they exercised them, were paid in the normal way—nor bound to maintain their troops out of their ik̄hāf. Each soldier received his pay direct from the Treasury in whatever form it might be given to him. One should not exaggerate: a variable proportion of the pay was still paid in kind, a part of the land was still administered in the traditional manner by the traditional authority, of which some fiscal handbooks for this period have been preserved for us.

With these reservations, socially and economically, a new and more powerful aristocracy, that of the military leaders, was gaining ascendancy over the middle-class and slowly declining aristocracy of the great merchants, civilian landlords and high-ranking officials who had been at the height of their power in the 'Abbasid era. But, under the great Buwayhids, the princes exercised a clean-cut authority over these leaders and made it their business to see that the new aristocracy respected their strict control in such matters as the police, public order (ṣīmāya) and even taxation. There was, of course, no question of relaxing the tax on all subjects which was the basis of the upkeep of the army, whether this applied to or for any other expedient cause. He had no permanent ties with the district and therefore no interest in its development. At best, the means thus placed at his disposal enabled him to build up more stable properties. Nevertheless, they were not yet either ik̄hāf-holders of the provincial governments—these functions, when they exercised them, were paid in the normal way—nor bound to maintain their troops out of their ik̄hāf. who built themselves sumptuous palaces. In east Baghdad the whole group of these buildings formed the Dār al-Mamlaka, as opposed to the Dār al-Khila'fa, and the buildings erected at it at gates of Shirāz by 'Adud al-Dawla at Kard Fānah Khurraw enchanted al-Muqaddas. The close union of 'Irāk and Fārs resulted in some attempts to introduce 'Irāk customs into Fārs, although no administrative unification was ever achieved. This union, from which local industries may have derived some profit, was in contrast with the periods which preceded and followed it, when the ties between 'Irāk and Iran were directed, across the central plateau, towards Khūrasān.

Culturally, the early Buwayhids were rough fellows without education, but their successors were moulded by the cultured indigenous aristocracy of Iran. In contrast with the remote Iran of the Sāmanids, the Buwayhid sphere of influence in Iran—not to mention a fortis, in 'Irāk—had the appearance of a strongly arabised area. We have already observed that the early Buwayhids, with Ibn al-'Amīd and Ibn 'Abbād as their wazirs, thus commanded the services of two of the most illustrious Arabic scholars of their day. Furthermore, a galaxy of Arabic poets were present at their courts. It was under the Buwayhids that Abu l-Parāqī al-Iṣṭahārī's "Book of Songs" and al-Nadīm's Fihrist, two treasuries of Arabic literature, were compiled. If Abū ʾĪṣāq al-Sābī had grounds for complaint against 'Adud al-Dawla, his grandson, the historian Hūlāl al-Sābī lived comfortably in the Baghdad of the later Buwayhids, who also protected the philosopher-historian, Mīsawānī. Generally speaking, sages were well-received by the Buwayhids, especially those whose special knowledge could be put to practical use. Such—leaving aside the religious sciences—were the geographer, Iṣṭakhrī, the mathematician, Abu ʾĪnisfāt al-Buzūdānī, al-Nasawī, who disseminated the "Indian numerals", the astrologers, for whom Ṣharaf al-Dawla built an observatory in Baghdad, the physicians (such as al-Madīṣī), who had cause for self-congratulation especially on the foundation by 'Adud al-Dawla of a remarkable hospital in the ancient capital, and another at Shīrāz [see Bimarstān]. The libraries of Shīrāz, Rayy, Iṣṭaḥān, organised by successive Buwayhids, excited universal adoration. It is common knowledge that Avicenna found sanctuary and high preferment (as a wazir?) under Șams al-Dawla. The great patron-wazirs were scarcely less munificent as long as they did not see in their protegés possible rivals for glory (Abū Ḥayyān al-Tawhīdī as against Ibn ʿAbbād). Ibn al-Bawwāb, a high Buwayhid dignitary, was one of the inventors of nāshī calligraphy.

But, while the Buwayhids and their ministers patronised literature and science of a traditionally Arabic character, they also showed a genuine interest in neo-Persian literature. If the first Daylami generation were not sufficiently polished to have any such pretensions, those who followed were in the widest sense more fully Iranian than Daylami. It was not for nothing that, as Mārdawīdī had dreamed, they revived the title of Shahanshah and caused to be drawn up for themselves a Sāsānī genealogy which, however, was universally recognised by their contemporaries as being historically unsound. Though their rôle in literature cannot be compared with that of the Sāmanids, they nevertheless had their Persian poets, and Firdawīs found a welcome at the court of Bahāʾ al-Dawla. The indubitable decline of Zoroastrianism, still flourishing in the Fārs province at the dawn of the Buwayhid régime, is probably in part linked with the fact that henceforth it was possible to form a separate block within Islam itself, under a "national" dynasty.

The place of the Buwayhid era in the history of Persian art would perhaps seem equally great if more thoroughly reliable testimony were available. Their buildings have already been mentioned in another connexion in which their places of worship perhaps count for less than their palaces, fortresses, hospitals, etc. Recent finds of textiles have now made it possible to study in actual examples this apparently traditional branch of Iranian craftsmanship. A good recent study on the art of the Buwayhid period is that of E. Kūhnel [see Bibliography], to which the reader is referred.

More generally, it is certain that, among the Buwayhids as elsewhere, the establishment of regional principalities, by setting up many new courts and cultural centres outside what until then was the more or less unique cultural centre of Baghdad, enriched and disseminated the life of the spirit and, by bringing it into contact with the varying requirements of different peoples, conferred upon it a new vitality.

The foreign policy of the Buwayhids seemed scarcely to have been affected by doctrinal considerations. In Iran, their great opponents in the 4th/10th century, were the Sāmanids, with their Ziyārid (descendants of Mārdāwīdī) and Šāfārīd (of Sīstān) vassals. Very naturally, they supported the Khurāsānī rebels, especially the Sīmājūrīs, against the Sāmanids, and took advantage of the ascendency of the Gharānīwīdīs at the beginning of the century and of the final ruin of the Sāmanids at the end. In the north-west, their policy was to establish or maintain a vague protectorate over the small Daylamlī dynasties, as to have them on their side in the fight against the Ziyārids on the one hand and the Kurds on the other. The struggle against the Kurds falls partly under the heading of "foreign policy", on the Adharbaydānī side, and partly of internal security—in other words mere public order—or on the Bidābī side (the Ḥamānīs and Kurds). The same is true of the hostilities, carried out for the most part in the time of 'Adud al-Dawla, against the Kūfīs and the Balūch of Kirmān and Makrān. Finally, the occupation of the ʿUmān, or more precisely of the vital strategic coastal areas of the region, at times by the Buwayhīs of Fārs, at others by those of 'Irāk, was clearly related to considerations of economic security. In Mesopotamia, following the liquidation of the Barīds of Baṣra, the main efforts of the two first generations of Buwayhīs consisted above all in the neutralisation and then the liquidation of the Ḥamānīs who, though Šīʿīs like themselves, were Arabs, and had been only recently their rivals in Baghdad. Naturally, a small semi-permanent war was essential for the maintenance of order on the borders of Arabia, and, in 'Irāk itself, in the Balūch as also in the Persian Gulf against the Carnamha of Bahrayn.

The appearance of the Fāṭimīs in 658 in Egypt, then in Syria, confronted the Buwayhīs of the second generation and their descendants with a problem unknown to the first. The claim of the new dynasty to be ʿAlīīd could not fail to excite interest among all Šīʿīs. Nor could this dynasty, with its "imperialist" ambitions, fail to try and further its own expansion by claims of this kind. It would, however, have been necessary for all Šīʿīs to accept
the heterodox doctrines of the Isma'illis which were the official doctrines of the Fatimid State, and, further, it was difficult to avoid clashes between two powers bent on dominating the territories between Egypt and 'Irak. The Buwayhids occasionally joined forces with the Carmathians, when they quarrelled with the Fātimids, and also, of course, with the Arab tribes fighting the Fātimids on one front and the Ḥamdānids or their heirs fighting them on another. It is difficult to assess just how far the anti-Fātimid manifesto of the Caliph al-Ḳādīr (402/1011) was an exact reflection of Buwayhid policy or whether it was also instigated by the desire to counteract Isma'ili infiltration. At any rate, there is nothing to support a view that it was done against the wishes of the Buwayhids, and it is remarkable that it was signed jointly by the Sunnī and Twelver sages. It was not until the end of the dynasty that a Buwayhid, Abū Kālidjār, lent a complacent ear to the explanations of al-Mu'ayyad al-Shirāzī, the Isma'ili missionary, though, officially at least, nothing came of it (Ṣīra of al-Shirāzī, al-Balkhī, 118; Abū Shudjā', 232). And the fact that after the fall of the dynasty in Baghdad their Turkish general, al-Basāṣīrī [q.v.], thoroughly intransigent while they were in power, declared his allegiance, against the Saljiqīd conqueror, to the Fātimid Caliphate, which alone was capable of coming to his aid, cannot be regarded as characteristic of Buwayhid policy in general.

However stable the Buwayhid dynasty may have appeared from the outset, however brilliant some of its achievements, it was not without its weaknesses. Some of these were common to other régimes; others were peculiar to itself, others again came not from within but from without. In this last category was the maritime trading crisis which had an appreciable effect upon the end of the Buwayhid era. It is certain that towards the year 1000 A.D. the trade with the West from the Indian Ocean ceased to flow mainly through the Persian Gulf, being diverted to the Red Sea (see B. Lewis, The Fatimids and the Route to India, in Revue de la Fac. de Sc. Econ. d'Istanbul, 1953). The persistent troubles of Lower 'Irāk and the presence in Bahrayn of the Carmathians, whom the Buwayhids were powerless to command, must have had something to do with this, as had also the complete segregation of Syria from Mesopotamia brought about by the Fātimid and Byzantine conquests. Probably an even more significant influence, however, was the economic imperialism of the Fātimids and the favourable conditions which attracted the attention of the merchant ships of Italy. When a natural catastrophe (in about the year 1000) ruined Sirāf, which up to that time had been the great Persian port of the Gulf, the town was not rebuilt, and the mastery of the Gulf belonged henceforth to the Lord of the Island of Kīsh, who seems to have been more or less a Corsair chief. Although we cannot accurately assess the consequences of these facts, it is scarcely likely that they were not serious both for the merchant classes of society, who were doubtless henceforth less well able to resist the growing power of the military aristocracy, and for the internal economics of the Buwayhid régime and consequently its general stability. Even before the year 1000, the Buwayhids were unable to avoid the devaluation of their silver coinage, and doubtless it was for this reason that in the 11th century, gold was used more and more, though one wonders how it came there. The Buwayhids were increasingly forced, in order to raise taxes, to have recourse to tax-farming, selling offices, etc.

A more domestic and congenital weakness in the Buwayhid régime as in most of the Near-Eastern régimes of this period, lay in that very army which had brought about the ruin of the Caliphate. The Buwayhid army, in spite of the pay being supplemented by ḥāṣd, was no more easily satisfied than its forerunner, the army of the Caliph. Like its predecessor, it knew itself to be the cornerstone of the system, and took advantage of its position. It was not, however, united. The original Daylamite nucleus was not adequate for long and, even before the conquest of Baghdad, the Buwayhids, like Mardawīdī, had added to it the corps of Turkish slaves indispensable to every Muslim army in the East. These, on the one hand, could be used against the Daylamites in the event of a breach of discipline (and vice versa), and on the other hand, and even more important, they were mainly horsemen, while the Daylamites, who came from the mountains and forests, were infantrymen. Occasionally, Kurds, Kufs etc., were also recruited. To the rivalry between this diversity of ethnic groups, must be added the fact that, at the beginning at least, the Turks taken over by the Buwayhids from the Caliphate were Sunnīs. Finally, for reasons which are still unexplained, the recruitment of Daylamite troops dried up progressively. The last descendants of the princes who owed their power to them were surrounded almost entirely by Turkish soldiers.

The third cause of weakness, rather more peculiar to the Buwayhid dynasty, was the splitting-up of power. From the beginning, it has been noted, there was not one but three Buwayhid principalities. The circumstances of the conquest may have had something to do with this, but another factor must surely have been a patrimonial or familial conception of power. When strength and chance combined to permit 'Ādud al-Dawla to establish an almost complete unity to his own advantage, he did no more than his predecessors to perpetuate this unity, which was disrupted at his death. This splitting-up of power, which distinguishes the Buwayhid dynasty from all the other Muslim dynasties before the Kāshghānīd and Saljiqīd Turkish dynasties, is inevitably brought about by internal strife, once the three founder-brothers were dead. It goes without saying that the army and all the trouble-makers benefited, so much so that this flaw in the dynastic organisation in its turn aggravated the vices born of the military régime and the other internal weaknesses of the system. The disturbances among the urban population, a harsh warning to the early Buwayhids, started up again; a revolt of Ḥṣṭakhr caused the destruction of the old metropolis, and Baghdad was at times in the power of the ʿaysārān [q.v.]. If the late ʿināds of the futuwa were to be believed, Abū Kālidjār was one of them. The policy of religious equilibrium followed by the Buwayhids in practice did no more than foster in this same town and elsewhere the struggle between ᵠhī's and Sunnīs, and the Hanballi extremists went so far as to burn the masjīd of Husayn and the tombs of the Buwayhids. The later Buwayhids, especially in ʿIrāk, were virtually powerless to command obedience from anyone.

This powerlessness to some extent benefited the Caliphate. The Caliph, who sometimes arbitrated in dynastic disputes, regained some measure of influence, at least in the affairs of ʿIrāk. Finally, for ʿIrāk the Caliph al-Kāšīn was able to have once more in his service after the lapse of a century a wazīr in the
person of the intransigent Sunnī Ibn al-Muslima. Hope of a partial recovery of the Caliphate as an institution now became something more than a utopian dream, witness the treatise *al-Ḥādīm al-Suṭūmīyya* of the great kāfī al-Māwārdī, closely associated with the policies of the Caliph. It was even possible, in Sunni circles, to look forward to the removal of the heretical protector. True, the weakness of the Buwayhids was not sufficient to restore to the Caliphate the material power needed for the reconstitution of an autonomous government; but it was possible, at least, that an orthodox and more respectful guardian might be found.

There was no lack of candidates to succeed the Buwayhids, some having only local ambitions, others aspiring to the unification of the Muslim East to their own advantage. Barely twenty years after the fall of the Hamādānīs, faced by the Marwānī Kurds of Dīyar Bakr, it became necessary to recognise the power of the ʿUqaylid Arabs in Dījarra. Twenty years after the fall of the Hasanwayhid Kurds of Dībāl, the ascendency of the ʿAnāzīd Kurds had to be recognised in the same region; not to mention the various Bedouin tribes who held the ʿIrāk-Arab or ʿIrāk-Syrian borderlands, and the frontiers of the almost independent principality of the marshes of the Ḥablā at the gates of Baghdaḍ. In Iran, a family related to the Buwayhids and for this reason called Kākwayhids or Kākōyids (from Kākōy; in Daylamite: maternal uncle), had taken over first Iṣfahān and then Hamadān. But the gravest danger came from the east. Here, the Ghaznavids had become a power to be reckoned with, and Māmūd of Ghazna now openly aspired to liberate the Caliphate. Meanwhile, he took advantage of the quarrels and impurities of the Buwayhids to send his son Masʿud to occupy Ravy. His forces massacred the Shīʿīs and burnt the treasures of their library as well as those of the Muʿtazīlīs (420/1027).

The death of Māmūd, followed by the defeat of Masʿud by the Saljūqs, gave a brief respite to the rest of the Buwayhids. But the triumph of the Saljūqsids enabled them to take up on their own account and with greater effect the plans for a Sunni empire. They had supporters in the entourage of the Caliphate. Buwayhid acceptance of Saljūqids suzerainty was of no avail. In 1055, Ṭughrīl-Beg entered Baghdaḍ without striking a blow, and imprisoned al-Malik al-Raḥīm. Fārs, in spite of fortifications set up at Shīrāz, also fell, being attacked from the north and from Kirmān. The Buwayhid dynasty was at an end.

**Bibliography: Sources:** We are fortunate in possessing three collections of correspondence and official documents: that of Abū Iṣhāk al-Ṣāḥīb, secretary to the Caliph al-Muṣṭafī and al-Ṭāḥī, important for the study of diplomatic history (some extracts edited by Shāhīb Arslān, 1858, the greater part unpublished); that of the wāizar Shāhīb Ibn ʿAbdābd (the papers relating to the reign of Muʿayyid al-Dawla only have been preserved, ed. ʿAbd al-Wahhāb ʿAzzām and Shawkī Dāyf, Cairo 1947), of considerable interest for the study of home administration; finally that of ʿAbd al-ʿAẓīz b. Yūsuf, a high official under ʿAḏud al-Dawla (summary by Cl. Cahen in *Studi Orientalistici in onore . . . G. Levi della Vida*): all three from the third quarter of the 10th/11th century. See also Kālīkhazāndī, Sāḥīb, xii, 129 & 130.

Nevertheless, the principal sources are the chronicles. The fundamental chronicle is that of Thābit b. Șīnān, continued by Hīdāl al-Ṣāḥīb until 447 A.H. All that has been preserved pertaining to the Buwayhid period is an extract relating to the period from the end of 399 to the beginning of 403, but whose general substance seems to have been carried over into the later chronicles who made use of it, first the Ṭaḡārīb al-ʿUmān of Miskawayh and his successor Abū Shūdāk al-Rudhawarī, the single manuscript of which links up with the fragment of Hīdāl al-Ṣāḥīb (the whole ed. trans. Margoliouth, *The Eclipse of the Abbasid Caliphate*, 7 vols, 1920-21), but also, completing and often correcting the Ṭaḡārīb, the *Takmila of Muh. b. ʿAbd al-Malik al-Hamadhānī* (preserved only up to 367) (ed. Kanān in *Mahārī, 1955-58*), the Ṣāmīl of Ibn al-Ḥāṯir, the *Mīrād al-Zamān* of Sīḥt Ibn al-Djāwīzī (unpublished for this period, more complete than the *Munāsām* of his ancestor Ibn al-Djāwīzī from which it also derives): these last three sources only cover the years after 393 A.H.

An apologia for the early Buwayhids in the form of a chronicle was composed (in order to obtain his release from prison) by Abū Iṣhāk al-Ṣāḥīb, under the title of al-Kūtāb al-Taḍītī (for ʿAḏud al-Dawla Tādī, the beginning of which, recently rediscovered in the Yemen, is in the possession of Dr. Minovi (it was not accessible to me), the work seems to have been known by later historiographers. Among the many works of Arabic historiographical literature, the following deserve special mention: Masʿūdī, *Mūṣādjī, ix, 1-34* (origins); Yāḥyā of Antioch; Ibn Jaʿfar, *al-Dawal al-Muḥtāṯīt* (relations with the Fātimids, unpublished but used by Wüstenfeld, *Geschichte der Fatimidischen-Chalifen*); Ibn Khallikān (lives of Muʿizz, Rukn and ʿImād al-Dawla); Ibn ʿṬabīb (late, but Shīʿī traditions); al-ʿUthbī (relations with the Ghaznavids); and the unduly neglected *Nestorian History of Mārī b. Sulaymān*, ed. Gismondi, Rome 1903.

Persian historiography comes into the picture with the anonymous *Muṣjdīl al-Tawārīkh* (ed. Bahmanyār, 1940), linked as regards Buwayhid history to al-Hamadhānī, and with the chronicles of the border states, the Ghaznavids (Gardīzī, Bayhakī), Ziyārīds and other southern Caspian dynasties (Ibn Isfandiyār). Moreover, several important local histories have come down to us in Persian. Examples of these are the *Ṭawrīk al-Kumm* of Hasan b. Muḥ. Kumāl, ed. Djalāl al-Dīn Thirānī, 1934, and the anonymous *Ṭawrīk al-Sūṭīn*, ed. Bahār, 1937.

In parahistoric literature, some information is to be found in al-Tanakīlī b. Nīṣābūrī (41, 151, 157, 169 and also in the Damascus 1930 volume, 130), and in the autobiography, *Sīra*, by the Fātimid missionary al-Muʿayyad al-Ṣīrāzī, ed. Kāmil Husayn, Cairo 1949 (relating to propaganda in the time of Abū Kālīǧīr). The diwāns and anthologies of such poets as al-Ṭaḥālīfī (Yaṭima), al-Bākharzī (Dumya), al-Tawḥīdī (especially K. al-Imāmī) are also useful; there is also some original information in the *Irshād* of Yāḥyā, ii, 273 f., iii, 180 f., v, 347 f., vi, 250 f. To the three great classics of geography, Iṣṭakhī, Ibn Hawālī, and al-Muḥaddassī—all three contemporaries of the Buwayhids (the first-mentioned was their subject)—may be added Nāṣir-i Kháṣarvīs *Safar-nāma* and some information contained in Yāḥyāsī K. al-Balīdī (especially iii, 145, art. Sāmīrān), and, in Ibn Balikhīs *Forsmānā* (ed. Nicholson; historical passage, 117-119).
Among juridico-institutional works, al-Mawardi, al-Ahkâm al-Sultânîyya, on which see supra, and, recently discovered at al-Athâr, the Rusûm Dâr al-Shâhûda by Hilâl al-Shâhû and his son Muh., on the etiquette of the Caliphate and the rules of the chancellerly up to the Buwayhid period (which was made accessible to me by the courtesy of Prof. Duri, Baghda), the financial history of the era can be studied through the treatises on fiscal mathematics by Abu 'l-Wâfa' al-Buzdâni (unpublished) and the anonymous K. al-Hâdî (analysed by Cl. Cahen in AIEO, Algiers 1952). See also Nizâm al-Mulk's Siydsât-nâmâ (ed. Schefer), especially 183. For religious history, see the theological works cited above, especially those of Ibn Bâbawâa.

Epigraphical material is to be found in RCEA (v, 1831-32, 1877, 1956; vi, 2079, 2577; viii, 2577), to be supplemented by G. Wiet, Soteres Persanes (cited below). For numismatic material, incompletely published, see, in addition to the Catalogue of the British Museum by Lane Poole, G. C. Miles, A Numismatic History of Rayy, 1938.

Modern Studies. No detailed comprehensive study of the Buwayhids exists, and apart from the suggestive sketch of V. Minorsky, La domination des Daylamites, Paris 1932, reader should consult those sections of B. Spuler's Iran in frûk-Islâmischer Zeit, 1952, and of A. Méz's Die Renaissance des Islams, devoted to the Buwayhids. More specialised aspects are dealt with in Mohsen Azizi, La domination arabe et l'épanouissement du sentiment national en Iran, 1952; Specialised aspects are dealt with in Mohsen Azizi, La domination arabe et l'épanouissement du sentiment national en Iran, 1952; and Amedroz, art. Shurî, in inshâ
desm [q.v.], and in the records of its western suburb Bab al-Buza, today the small town and half village according to that writer, and dominated by a citadel from which its strength was derived, it managed to withstand after the establishment of an incoming petition or report, often ordering that a fermân (or berât, etc.) be issued to a certain effect (cf. Kânînâmât-i Âl-i 'Âlâm, TOEM, Suppl., 1330, 16); b) orders issued independently (re'sên, beyzâd izeserine). The form of many of the latter was modelled on the Sultans' fermân [q.v.].

Many Buwayhilds had a seal and (or) a tughra-like substitute of a signature, the so-called jende [q.v.], affixed. Sometimes the word sahâ, 'it is correct', was added for authentication. Buwayhilds deal with various administrative matters, especially appointments, grants of fiefs, economic regulations, safe passage, etc. Originals are preserved in many archives in Turkey and elsewhere. The Baspevdet Arşivi [q.v.] at Istanbul also possesses numerous volumes of Buwayhîl documents. Other texts are found in insâm works (e.g., library of Türk Tarih Kurumu, Ankara, MS no. 70; Bibl. Nat., Paris, suppl. ture, MS no. 90) and in the records (sidülî) of Şarîa courts.

BUWAYHIDS or BUZââ (or Bûzâa), a locality in northern Syria about forty kilometres east of Aleppo in the rich valley of the Nahâr al-Dâbah or Wâdi Buţân [q.v.], which has lost its former prosperity in favour of its western suburb Bâb al-Buza, today the small town of al-Bâb. The freshness of its gardens and its commercial activity attracted the attention of Ibn al-Bawârî who stopped there in 380/1194, on the caravan route from Manbij to Aleppo. Half town and half village according to that writer, and dominated by a citadel from which its strength was derived, it managed to withstand after the establish-
ment of the Crusaders in Syria numerous attacks resulting either in the plunder of its territory, or even, in 531/1138, its seizure by the Franks, followed in the same year by Zangi's reoccupation. An inscription there mentions in 567/1171 the name of Isma'îl, the son of Nūr al-Dīn, before the town fell in 571/1175 to Saḷāḥ al-Dīn, and passed after that into the hands of the Mongols in 657/1258. It is also known that in 570/1174-75 there was a massacre of the Ismā'îlīs there who seem to have dominated the country formerly, and that in the vicinity the minaret of 'Aqīl b. Abī Tābī was venerated. It was during the period of the Mamluks that the village of al-Bāb, whose name was not separated from that of Buza'a in the medieval texts, appears to have clearly taken the lead. The importance of this place, which was the principal town of the 24th district of the province of Aleppo, and which Yākūt formerly described as an exportation point of cotton stuffs, is attested by the construction at that time of its great mosque (connected with the erection of the minarets of Buza'a and Tadhif, dated by inscriptions of 756/1355 and 755/1354), and by the number of administrative measures which were engraved on the gates of this building between 775/1374 and 858/1454.

Several epigraphical fragments are preserved as well in the neighbouring village of Tadhif.

BUZ-ABEH, governor of Fārs under the Saljuqs. Būz-Abeh was one of the amīrs of Mengu-bars, the governor of Fārs, for whom he administered the province of Khūzestān. He was also in the army of his superior when the latter, accompanied by other amīrs, moved against the Saljuqs. Mas'ud and was made prisoner at the battle of Kurganba (other sources call the scene of the encounter Pandī Angushi), later being put to death, in 532/1137-38. Since, after their victory, the sultan's troops began to plunder the enemy camp, Būz-Abeh attacked and dispersed them. Several prominent amīrs of the sultan's retinue were captured, and the sultan himself escaped only with great difficulty, in the company of the aṭaēb Kara Sonḳor. Enraged at the death of his superior, Būz-Abeh had all of the prisoners executed, among whom was the son of Kara Sonḳor. In order to avenge his son, the aṭaēb undertook in the following year an expedition against Fārs, where he installed the Saljuq prince Saldjūkshāh. But scarcely had Kara Sonḳor retired with his troops when Būz-Abeh, who had in the interim withdrawn to the fortress of Saḷīdīdī (Ku'd al-bayyādī), reappeared and conquered the defenceless Saldjūkshāh (534/1141). Sultan Mas'ud then forced them to abandon to him the province of Fārs. Būz-Abeh found an opportunity to confirm his situation by allying himself with two other amīrs, 'Abbās, ruler of Rayy, and 'Abd al-Rahmān Tūghūnyarāk. The sultan tolerated some time the tutelage of these men, but succeeded in freeing himself by having assassinated the two latter amīrs. Būz-Abeh marched against the sultan, but was captured and killed at the battle of Mardjk Karatākīn, a day's march from Hamadhān, in 542/1147. Būz-Abeh appears to have left a good administrative record at Shīrāz. Conforming with the tendency of all of the generals educated in the Saljuq tradition, he had erected a madrasa, richly endowed and at first Hanafī, though it became later Ḥanbali.

AL-BUZADJĀNĪ [see Abu' l-Wafā'ī]

BUZAKHA, a well in Nāqid in the territory of Asad or their neighbours Tāyyūn (cf. Mosâdāta, 3, 361, n. 3). The forces of the Banū Asad, who, led by the false prophet Tulayha, had relaxed from Islam on Muhammad’s death, were defeated at Buzakha in 11/632 by Abu Bakr's general Kḥālid b. al-Walī. Kḥālid's army was reinforced for the battle by 1000 men of Ṭayyi', detached from Tulayha's side; Tulayha had the help of 'Uyyayna b. Ḥṣa and 700 men from Fazāra of Chotaḥān, old allies of Asad's. After fierce fighting, 'Uyyayna saw that Tulayha's alleged prophetic powers were in practice proving useless against the Muslims, and fled the field. Tulayha had to flee to Syria; Asad submitted to Kḥālid; and neighbouring tribes like 'Amīr, who had been awaiting the outcome, now rallied to Islam.

BIZURGMIHIR, Persian ships'-captain (nākūhād) of Rām-Hurmuz of the first half of the 4th/10th century and author of the Kitāb 'Aqīdah al-Hind (Marvels of India). This is a collection of Arabic of 134 stories and anecdotes gathered by the author from ships'-captains, pilots, traders and other seafaring men who used to sail the Indian Ocean and likely to spin a yarn about their adventures in East Africa, the Indian Archipelago and China. Incidentally they also give some information about these countries and the customs of their inhabitants. Sometimes the year of the event referred to is given, the latest being 349/953. The language of the book shows some Middle-Arabic traits (see 'Arabiyya, above, 570b).

Bibliography: The Arabic text, extant only in the Istanbul MS. Aya Sofya 3306, was edited by P. A. van der Lith together with a French translation by M. Devic, Leiden 1883-6. A new translation in French by J. Sauvaget is given in his Mémoires, i, Damascus 1954, 188-300; Russian translation by R. I. Ehrlich, Moscow 1959. See also Brockelmann S I, 409. (J. W. Fock)

BUZURGMIHIR, Iranian personal name (arabicised form Buzurgmihir) which according to a tradition transmitted by Iranian and Arab writers, was given to a man endowed with every ability and virtue who was the minister of Khusrav I Anūgha-
rawân (6th century A.D.). The earliest authorities who were acquainted with the Pahlawi Kthádhrnrmégk ("Book of Sovereigns"), written towards the end of the Sásánid period (7th century), the oldest accounts of pre-Islamic Iranian history penned by Arab writers (al-Tabari, Ibn Kutayba), have no reference to Buzurgmihr. It is only in later works that he becomes the hero of anecdotes deriving from popular tradition (in Thaślalí's "History of the Persian Kings", a section of the Thchur al-Siyar — vide El, iv, 770 col. a, and, more freely than one would expect, in Firdawsl's "Book of Kings", the Shâdk-nmâ, and sometimes the originator of numerous wise precepts, survivals from the collections (andar) of the Sásánid period, preserved in some minor post-Sásánid Pahlawi works (notably the Pandnrmégk-e Vuzurgmâr-e Bokhtaghdn, "the Book of precepts of Buzurgmâr son of Bokhtâgh"). These precepts were translated into Arabic and Persian by several authors: al-Masâdl, Firdawsl (in whose poem Buzurgmihr presents the king with the book of wisdom, the fruit of their conversations, which in reality derived from the Pandnrmégk), Nîçmîn al-Mulk, and others. There are three anecdotes concerning Buzurgmihr which are significant because of their elements of popular origin: I—the King of Persia dreams that, as he is drinking, a pig puts his snout in the cup. No one can interpret this until the young Buzurgmihr informs the king that one of his wives is bestowing her favours on another and that, in order to be certain, the women must be summoned to appear naked: among them is discovered a youth of the same age as the woman just mentioned. II—Buzurgmihr discovers the secret of the game of chess, sent as a challenge by the King of India to the King of Persia; he then invents the game of tic-tac-toe, the secret of which the latter and his counsellors do not succeed in discovering (the source of this is a small Pahlawi work of a popular type, the "Story of the Game of Chess", Mâdhdhrn-e satrang). III—Buzurgmihr, in disgrace and in prison, is recalled when the Byzantine Emperor refuses to pay tribute to the Persian sovereign unless he guesses the contents of a sealed coffer which he has sent him; the king summons Buzurgmihr, who resolves the enigma and is reinstated in royal favour (to the preceding theme is joined that of the sage liberated and recompensed for his wisdom: Nôdeke recognised the similarity of this episode with another in the history of the sage Ahikar). These anecdotes put Buzurgmihr in direct contact with popular tradition, but is he a historical personage? A. Christensen, in a noteworthy article, has rightly pointed out, apart from a reference to Buzurgmihr, there are others relating to the sentence of death passed by Hormizd, the son and successor of Anôsharawan, one of three of the latter's counsellors, one of whom bore the name of Burzmâr (Thaślalî), Burzmâr, then Simâh Burzê—a hypocoristic of Burzmâr (in Firdawsl). In the name of Burzê, the famous physician, the supposed author of the Pahlawi adaptation of Kaîla va Dimâ, who was a contemporary of Anôsharawan. Justi (Iran Namenbuch, 74) and Christensen see the same root burz ("high") and a hypocoristic ending (as in Burzê, peculiar to the Sásánid period, are very rare, Burzmâr ("protected by the High Mithra") is semantically related to Burzmâr ("protected by the Great Mithra"): further it is enough to write both words in the Arabic script in order to see discursively they may be confused. Finally, certain passages in the preface to the Kaîla, traditionally attributed to Bûrzê and known through the Arabic translation of Ibn al-Mukaffa', give bibliographical details which the authors also attribute to Buzurgmihr or divide them between both personalities. To sum up, Iran in the reign of Anôsharawân was influenced by Indian civilisation, thanks to certain intellectuals, of whom Bûrzê was one, and who was made famous by his Pahlawi adaptation of the Pancatantra; the introduction of chess in Iran was attributed to him, a number of precepts and maxims, and later certain characteristics of sagacity and divination which already existed in popular tradition; then a false reading of his name as transcribed in Arabic led to the creation of a double personality.

Bibliography: A. Christensen, La légende du sage Buzurgmihr, in Acta Orientalia, 1930, iii/1, 81-128 (a basic and detailed study, with an analysis of and extracts from the sources); idem, Iran sous les Sassanides (particularity 57-8, and index, i.e. Vuzurgmihr, Bûrzê); on the Zafarnmâ, vide the text in Ch. Schefler, Christ. persan, i, 17 and Christensen's trans. in La légende..., 121; Grundriss der Iran. Philologie, ii, 346-7. (H. Masé)

BUZURG-UMMID, Kîva, second dâsî (1124-1138) at Alamût (q.v.) of the Nizârî Ismâ'îlîs. He was evidently related by marriage to the ruling families of Mâzandârân. From 495/1102-1124 he was Ismâ'îlî governor of Lumnasar, a stronghold in the Rûdhâr of Alamût. He with three other chiefs had captured it for Hasan-i Sâbbâh when its holders had broken their agreement with the Ismâ'îlîs and had planned to call in the Sâlîgûk amîr, Nâshâtân Shîrîr. Using local forced labour, he rebuilt it, equipping it with water and fine gardens. There he successfully resisted the last and gravest attack on the Ismâ'îlîs by Muhammad Tapar's troops under Shîrîr in 511/1117. In 518/1124 Hasan-i Sâbbâh on his deathbed appointed him his successor as head dâsî of the sect, with three associates. Under his rule the Ismâ'îlî state retained its independence against renewed attacks [see Alamût (II) The Dynasty] several new strongholds were established, including Maymûndiz in 520/1126. In 526/1131 he defeated and killed a Zayûl îmîm, Abû Hâshûm, who had arisen in Daylamân and had followers as far as Khurûsân. Buzurg-ummid died in 532/1138, leaving the position of dâsî to his son Muhammad. He was buried next to Hasan-i Sâbbâh, where his tomb was piously visited. His descendants formed the leading family in Alamût.
